In the Matter of

International Record Carriers' Scope of Operations in the Continental United States, Including Possible Revisions to the Formula Prescribed under Section 222 of the Communications Act

Docket No. 19660
RM-690

REPORT AND ORDER AND NOTICE OF PROPOSED RULEMAKING

Adopted: December 22, 1975 ; Released: January 7 1976

By the Commission: Commissioner Hooks issuing a separate statement.

I. PRELIMINARY STATEMENT

1. This investigation and rulemaking proceeding was instituted in 1973 to determine whether the Commission should modify the present international formula which was prescribed in 1943. That formula governs distribution by Western Union Telegraph Company (WU) among the international record carriers (IRCs) of outbound, unrouted international message telegraph traffic. Our reasons for instituting this proceeding are fully presented at 43 FCC 1174 (1973), (Designation Order). In a subsequent order, 47 FCC 2d 225 (1974), we modified our procedures because of a controversy among the parties concerning the reliability of information submitted by the International Quota Bureau (IQB). 1/

2. Pursuant to our orders, Statements of Fact and Memorandums of Law were filed on July 10, 1974 by Canadian National Railway (CNR), Canadian Pacific, Ltd. (CPL), ITT, RCA Global Communications, Inc. (RCA), TRT Telecommunications Corporation (TRT), Western

1/ The IQB is the professional staff of the International Formula Committee (IFC), a body composed of representatives of the IRCs entitled to traffic under the formula. Section XI of the formula places administration of its provisions with the IFC. In carrying out its function to instruct WU to which carriers it is to distribute traffic, the IQB maintains data on traffic volumes and distribution. The Designation Order made the IFC and IQB parties for the purpose of providing the respondents with data for their use in responding to the designated issues. 43 FCC 2d at 1182.

Union International, Inc. (WUI), and WU. 2/ In addition to these Statements, Comsat General Corp. on July 8, 1974 filed Comments and on August 30, 1974 a Reply, in which it raised the question whether the formula governing distribution of outbound message telegraph traffic destined to ships at sea (maritime formula) should be revised. On August 19, 1974, all respondents except CNR and CPL filed Responses to the initial Statements and, on September 6, 1974, Replies. During April, 1975, WU submitted to the parties and the Commission the results of its study of outbound message traffic. Based on the results of this study, the parties filed on August 1, 1975, Supplementary Comments and on August 28, 1975, Supplemental Replies. In addition to these formal pleadings, statistical data were submitted by the IQB. Not submitted for consideration in this inquiry, but incorporated by reference into the pleadings of RCA and ITT, was a document prepared by the Policy Support Division, Office of Telecommunications, United States Department of Commerce (OT) entitled Policy Research Estimate, Working Draft, The International Formula for the Distribution of Unrouted Telegraph Messages, dated June 2, 1975. To the extent useful in considering the arguments of the parties, we will take notice of this document. The foregoing items, plus the pleadings considered in the Designation Order, constitute the record for decision in this proceeding.

Summary

3. After considering the views of the parties and other material before us, we have concluded that the present method of distribution embodied in the international formula is unjust, unreasonable, inequitable and not in the public interest; and that the formula should therefore be replaced as provided below. In reaching this conclusion we find that the present formula, under the circumstances prevailing today, fails to meet the statutory standard in Sections [illegible](e)(1) and 222(e)(3) either in concept or in operation. As we explain more fully below, the present formula, with its basic unit the quota system, represents a market-sharing device which is by definition antithetical to the free flow of competition which Congress sought to encourage and enhance. Whatever may have

---

2/ The French Telegraph Cable Co. (FTC) and United States-Liberia Radio Corporation (U.S. Liberia) were also named as parties to this inquiry. Both carriers filed statements that they did not wish to participate in the inquiry, but stood ready to implement any decision of the Commission.

3

been the justification for this arrangement under the unique circumstances facing us in 1943, the present conditions in the industry and the economy generally indicate that such practices now work against the public interest. We have also found that the formula has not worked well in practice. Due to weaknesses in the formula structure and changes in the industry which the formula failed to predict or allow for, serious distortions have developed in the pattern of distribution which appear unlikely ever to correct themselves. These distortions have made the present formula inequitable as among the parties and have worked against the public's interest in a strong, efficient public message service. In these circumstances, we believe the formula has outlived its usefulness and should be repealed. In place of the present formula, we will place distribution of traffic on the choice of the customer. For reasons discussed fully below, however, we cannot move immediately to required customer routing. In the interim, we have prescribed a new formula which distributes unrouted traffic among the IRCs in the same proportions as each carrier handles routed traffic. In this way, the inequities of the present distribution will be eliminated and the carriers encouraged to seek specific routings from customers. In the material which follows we will set out (1) the historical background, (2) a summary of the contentions of the parties, (3) our findings with respect to the designated issues, (4) our conclusions with respect to the present formula, (5) the interim method of distributing outbound traffic, and (6) the measures we intend to take toward implementation of the all-routed method of distribution.

A. Historical Background

4. The present international formula was prescribed in 1943 pursuant to Section 222(e)(1) of the Act 3/ in connection with our approval of the plan of merger submitted by WU and the Postal Telegraph Cable Company (Postal). Section 222 had been added to the Act to permit merger of the two remaining domestic telegraph companies with extensive nationwide public message services. Congress imposed on the permission to merge ancillary restrictions to control the power WU would

---

3/ 47 U.S.C. §222(e)(1) provides in pertinent part that

> /i/n the case of any consolidation or merger of telegraph carriers pursuant to this section, the consolidated or merged carrier shall, . . . distribute among the international telegraph carriers, telegraph traffic by wire or radio destined to points without the continental United States, and divide the charges for such traffic, in accordance with such just, reasonable, and equitable formula in the public interest as the interested carriers shall agree upon and the Commission shall approve . . . .

achieve by its consequent de facto domestic monopoly. For present purposes, the two relevant restraints are the divestment requirement in Section 222(c) (2) and the requirement of Section 222(e)(1) for a formula to govern distribution of traffic by WU among the IRCs. These requirements were occasioned by the fact that, prior to merger, WU operated an extensive international message telegraph network (WU Cables Division) in addition to its domestic network. As a condition of merger, WU was required to divest itself of its international facilities. However, because WU was subject to certain legal commitments, Congress believed that divestment might be delayed. For this reason, Congress did not make divestment a pre-condition of merger. 4/ In the interim, Congress imposed a requirement for a formula to govern distribution of traffic which would prevent WU from using its domestic monopoly power to the detriment of its international competitors.

5. Prior to the merger, RCA was the only IRC which maintained public offices in the main international terminal cities of New York and San Francisco. The others relied largely on connections with WU and Postal for the intra-United States handling of their overseas traffic. WU exchanged traffic between its domestic operations and its Cables Division. The component companies of ITT had similar arrangements with Postal, which until 1940 had been affiliated with ITT. Various IRCs also had arrangements with WU (domestic) for exchange of traffic to and from hinterland points. In addition, RCA and Mackay Radio & Telegraph Company (a predecessor constituent of ITT) also operated a few domestic radio circuits linking major cities, which they used chiefly for domestic handling of their international traffic. However, with the disappearance of Postal after the merger, and the termination of the Mackay and RCA domestic circuits during World War II, the IRCs after merger were dependent on WU for the domestic handling of their traffic.

6. To accomodate their concerns, the parties developed a formula based on quotas for each carrier which, by freezing the carriers' pre-merger positions, would prevent WU from favoring itself. 5/

4/ 47 U.S.C. §222(c)(2) provides in pertinent part that

> /a/ny proposed consolidation . . . shall provide for the divestment of the international telegraph operations theretofore carried on by /WU/, within a reasonable time . . . as soon as the legal obligations . . . /of WU/ will permit.

5/ Section 222(e)(1) provides that the Commission shall prescribe a formula only in the event the interested parties cannot agree upon one. After reaching agreement, the parties submitted their proposal to us for review. In our review, we found objectionable certain features of the carrier agreement and modified them. For this reason, we prescribed rather than approved, the present formula.

5

The formula divides international destination points into three "Areas" -- "A" (Atlantic), "B" (Latin America), and "C" (Pacific) -- grouped according to the facilities used to serve points within them and the carriers which then operated there. These Areas are broken down into a number of "Subareas." For the purpose of applying the quota system, the basic unit is the subarea. The formula also divided points of origin in the United States into two classes: (1) New York, San Francisco and Washington, D. C. (called "gateways") and (2) other United States points (called "hinterland"). Essentially, there are two separate formulas provided for -- one for gateway-originated traffic and one for hinterland-originated traffic. Based on the above, the formula provides to named IRCs a quota for each category of traffic, for each subarea of destination, and for each recognized origin point. 6/ A carrier's quota for each category of traffic is defined as the ratio of outbound traffic in that category handled by that carrier during 1942 to the total traffic handled that year by all carriers serving that point. Essentially, then, a carrier's quota represents its market share during the base period. 7/ WU was directed to apply the quotas so that each eligible IRC received a proportion during the current period of "gross international tolls" 8/ equal to its quota. There was, however, a problem inherent in the quota system arising from the fact that, irrespective of quotas, an IRC was to receive all traffic specifically routed by the sender via that carrier. Because of this feature, WU would be able to insert routings via WU Cables on any message and thereby divert traffic to its own facilities. To counter this, therefore, the

---

6/ Each IRC does not have a quota for every destination point. Generally, a carrier received a quota if that carrier operated to individual points within the appropriate subarea at the time of the merger.

7/ Because World War II had interrupted service in 1942 to certain points, the formula provided that upon reestablishment of service quotas should be calculated with reference to the last 12-month period in which communications were conducted before interruption.

8/ The term "gross international tolls" is defined in the formula as (1) tolls payable to or collectible by an IRC at the U.S. gateways as if all traffic had originated at the gateway, less WU's payment for its landline haul (if the message did originate in the gateway) or (2) rental income for a leased circuit used to transmit traffic. See International Formula, Section V. This provision was designed to compensate for the fact that individual messages in a given category might differ in length.

6

formula provides a mechanism (balancing provision) designed to restore the general market shares. If a carrier exceeded its quota in any category solely from routed traffic, WU was to withhold from it an equivalent amount of unrouted traffic in other categories to balance the excess. If a carrier failed to receive its quota in a given month, the distribution was to be adjusted in later months to compensate it for the deficiency.

7. Beyond its basic features, the formula includes several special provisions aimed at particular problems or concerns of individual carriers. First, under the formula, RCA was entitled to receive specifically-routed traffic destined to Areas A and B; but received no unrouted traffic originating in the gateways (it does have quotas for hinterland traffic). Instead, Schedule B to the formula provided that RCA was to receive approximately 61.5% of WUI's quotas 9/ for traffic destined to the subareas, Continental Europe and Beyond the Continent, of Area A. RCA and WU had entered into a contract in 1931 providing for a similar shift of a block of traffic, apparently to compensate RCA for the fact that it turned over to WU more inbound traffic than it received outbound traffic from WU. Second, in 1943 United States traffic to certain points in Australasia routed via cable was generally handled by transfer to CNR or CPL, since the only direct cables to those points ran from Canada. To preserve the status quo with respect to this traffic, and to protect the rights of CPL under its contracts with Postal, the formula therefore provided a special arrangement for traffic to points in Australiasia and the British West Indies. In general terms, the provision created a separate quota system applicable to these carriers designed to preserve their pre-merger position. Third, when we amended the formula in 1963 to reflect the creation of WUI, we added a special provision to designate particular WU public offices in New York, Washington, and San Francisco as WUI public offices, so that traffic filed in such offices would, absent a specific routing via another carrier, automatically be considered as specifically routed via WUI. This was done to spare WUI, in its early years, the expense of establishing its own offices and to put it in a position comparable to its competitors.

B. Contentions of the Parties

8. ITT listed certain features of the present formula which it characterized as particular problems requiring correction. See 43

9/ In 1943 the provision applied to WU's Cable Division. In 1961, when WU was formed from WU's divested overseas facilities, WUI succeeded to WU's obligations under this provision.

FCC 2d at 1176. In commenting on ITT's arguments, TRT supported ITT's request for revision and included some specific matters which it believes need correction. In summary, the following is a list of the items which the proponents advanced as defects in the formula:

(1) The anticompetitive market share quota system;

(2) The "balancing system" which deprives a carrier of unrouted traffic when it increases its proportion of routed traffic;

(3) Basing quotas for unrouted traffic on the amount of self-generated traffic (gateways);

(4) Denying a carrier a share of unrouted traffic to a given point because it did not serve that point in the base year (1942);

(5) The lack of a provision for adjusting quotas to meet changing circumstances;

(6) The cumbersome and complex structure (separate quotas for gateway and hinterland, separate quotas for each class of traffic, etc.);

(7) The accumulated overages and deficiencies;

(8) Schedule B of the formula - special arrangement for RCA;

(9) The special quotas for CNR and CPL (Appendix 1 to the formula); and

(10) The designation of certain WU offices as WUI public offices.

RCA and WUI generally opposed the request for formula revision. They contended that the present formula works well in practice and asserted that neither ITT nor TRT has shown any evidence that the public interest has been disserved. The opponents also challenged the assertion that the present formula stifles competition and noted that all carriers

provide the highest quality service to the public. 10/

9. To remedy the alleged inequities of the present formula, ITT, TRT and WU have advanced a number of specific proposals for a new distribution which they assert will better serve the public interest and simplify administration. Briefly, ITT recommended a distribution which ignores an IRC's self-originated traffic, directs WU to honor customer routings, and allocates unrouted traffic equally among all IRCs authorized to serve the destination point directly. TRT recommended a distribution of unrouted traffic based on each carrier's share of routed WU transfer traffic (ignoring self-originated routed traffic) to each destination point. Id. at 1179. WU, reflecting its desire to simplify or eliminate its role in administering the formula, advanced three alternative proposals. First, WU suggested replacement of a formula with a distribution based on a requirement for specific customer routings. Second, WU suggests that if a formula must be retained, then it should be permitted to transfer all unrouted traffic to the IQB or some other representative of the IRCs for distribution. Third, as a fallback position, WU requests that it be allowed to transfer all unrouted traffic to a given area to only one selected IRC. Id. at 1178.

10. In its Statement, ITT agreed that TRT's proposal might be a more logical and equitable basis for distribution of unrouted traffic; but only with certain modifications:

> (1) the distribution should be based on a country-by-country basis according to the destinations a carrier is authorized to serve directly;
>
> (2) self-generated gateway traffic could be excluded, but WU pickups in the gateway as well as the hinterland should be included in determining traffic percentages; and

---

10/ Since the formula is a rule within the meaning of Section 551(4) of the Administrative Procedure Act, 5 U.S.C. §551(4) (1971), ITT's request for amendment of the formula constitutes a Petition for Rule-making. Accordingly, Section 553 requires that interested parties be given opportunity to present their views through written submissions, but does not require trial-type hearings. In the present case, all interested parties have been given opportunity to present their views and to challenge the views of other parties. There are no contested issues of fact; only the legal questions whether the present formula meets the statutory standard and, if it does not, what method of distribution will meet that standard. Therefore, we conclude that no party has been prejudiced by our procedures in this case and that a trial-type evidentiary hearing, as requested by RCA and WUI, is neither required by the Communications Act and the APA nor necessary to the resolution of the question before us. Cf. Bell Telephone Company of Pennsylvania v. F.C.C., 503 F.2d 1250, 1265-6 (3d Cir. 1975). Accordingly, we will deny the request.

(3) calculation of proportionate shares should be based on an historical period, but should be updated every six months (with a six-month lag to allow for preparation of the calculations).

ITT also indicated that, in the interest of simplicity, the WU proposal to distribute all unrouted traffic to a given area to one IRC would be acceptable, so long as each carrier received its proportionate share overall. TRT reiterated its position that unrouted traffic to each destination should be distributed in the same proportions as routed, and suggested that eligibility be based on the points a carrier lists in its tariffs. TRT also indicated that ITT's original proposal to divide unrouted traffic to every destination equally among the carriers serving that point (again, based on its tariff) would also be a fair and simple method. TRT challenges ITT's proposal to base distribution on direct service on the grounds that all carriers compete for traffic to the points they serve irrespective of whether those points are served directly or indirectly. In its Supplemental Response, ITT further modified its position to indicate that a distribution on a world-wide, rather than individual destinations, would be equitable; and would satisfy WU's desire for an easily-administered formula. Under this proposal, there would be a single world-wide distribution of unrouted traffic, regardless of class, based on each carrier's percentage share of routed WU transfers (both gateway and hinterland origins).

11. In general, RCA and WUI argue that the above proposals are no less arbitrary than the present formula and cannot be shown to serve the public interest any better. Further, since all the proposals are geared to increasing competition among the IRCs, they may actually be detrimental to that interest. In this connection, they note that one of the features of the present formula we specified in our order prescribing it was that, by reducing solicitation efforts, it would hold down carrier costs. In their view, the inevitable consequence of any of these proposals would be an increase in carrier solicitation efforts which would increase costs without improving service; and, since message would service traffic volume is static or declining, the increased costs result in increased usage charges.

12. WUI Counterproposals. In its Supplemental Comments, WUI included three proposals of its own for resolution of the formula, controversy. First, it suggested that the proposals for amendment of the formula be submitted to the IFC. 11/ A pre-condition to this, however,

11/ Sections XI of the present formula provides that

> /i/n the event there is disagreement among the members of the /IFC/ with respect to any feature of the distribution of traffic under the formula, the disagreement shall be submitted to the interested carriers, including /WU/ . . . .

10

would be equalization of the voting strength of the various members of the IFC. ITT has four votes (based on four constitutent companies) and RCA has two (its own and that of Radiomarine Corp.), while the other carriers have only one vote each. If this situation were rectified, the matter could be submitted to the carriers for resolution, with the active participation of the Commission staff. Second, WUI suggests that, unrouted WU transfer traffic could be distributed in the ratio of unrouted traffic distributed during the period of the WU study. Routed transfers and self-originated traffic would be ignored. Third, WUI suggests that the separate gateway and hinterland quotas be replaced by one nationwide quota. In connection with the proposal, WUI would open its own public offices and abandon the designated WU offices, thereby placing all IRCs on an equal footing. The quotas would be calculated according to the number of messages, relying on random distribution to assure that all carriers get a fair mix of long and short messages. WUI also suggests that all classes of messages be treated as a unit, thus simplying application of quotas. Schedule B would also be eliminated to place all IRCs in the same position. Next, WUI suggests replacing areas A, B and C and all subareas with a distribution based on each destination country (the quota would be the same for each point as that of the subarea of which it presently is a part). Next, WUI would eliminate the quotas for CNR and CPL and remove their obligations for payment of the expenses associated with formula operation. Finally, WUI suggests that all RCA gateway traffic to areas A and B be counted in its quotas (RCA chose not to have gateway quotas to those points) to remove the disproportionate share of hinterland-originated unrounted traffic it now gets.

13. TRT opposes all of the WUI proposals on the grounds that they permit WUI to continue to receive most of the undue benefits it enjoys under the present formula. RCA supports the first and second WUI proposals, but opposes the third. RCA agrees that if voting power were equalized (including loss of one of RCA's two present votes), the IFC could be an effective forum for discussion of formula revision. As to WUI's second proposal, RCA believes it merits serious consideration. RCA states that basing distribution of unrouted traffic on the ratios in the WU study would eliminate ITT's most serious objection -- shifting unrouted traffic away from carriers who increase their routed traffic. The advantage RCA sees in this is that solicitation expenses, which undoubtedly would increase, would be held at a lower level than under ITT's proposal and the effect on other IRCs of traffic shifts would be gradual. RCA objects, however, to the provision in WUI's third proposal for abolishing Schedule B. RCA believes that this proposal affects it alone and is in derogation of its contractual and formula rights, and that any change would have to be based on RCA performance data relating to the base period (1942) which no longer exists.

14. Since WUI's proposals were presented outside the designated issues, we will treat them separately. After considering the proposals, we have concluded that none of them represents a suitable basis on which to resolve the formula inquiry. Essentially, they represent little or no change over the present formula, at least in the short run. We are of the opinion that WUI's first proposal, even with equalized voting power, would not lead to an early resolution of the dispute. The various party interests are strongly entrenched, so that if there is any conclusion it is likely to be a compromise which ignores the public interest we have been considering in this proceeding. We note that the present formula was the result of a compromise and that many of the problems we have seen in it have come from the cumbersome structure thus developed. We see no compelling reasons to delay further the resolution of the issues, especially since the result may be an equally arbitrary compromise. Turning to the second WUI proposal, and ignoring that the study results may not be representative of a whole year's performance, we believe that this proposal would perpetuate for the foreseeable future the distortions of the present distribution. We note that while WUI's proposal allows for shifts of traffic, it does so only as the pool of unrouted traffic shrinks. While we agree that WUI's third proposal would result in simplification of quota administration, we must note that basing distribution on current market shares will not change any of the basic infirmities we see in the present formula. Accordingly, we cannot adopt any of WUI's proposals as submitted.

II. FINDINGS: THE PRESENT FORMULA

15. To ascertain what has happened after 30 years of formula operation, we will look at the distribution presently being made under the formula (Issue one). For the purpose of our analysis we will use, as did the parties, the results of the WU 13-week study, supplemented by calendar-year 1974 figures reported by the carriers pursuant to Section 43.61 of the Commission's Rules and Regulations. 47 C.F.R. §43.61 (1974). In 1974, a total of 8,640,411 telegraph messages (all classes) were sent outbound from the United States; which yielded revenues of $21,486,392. In this connection, we note that traffic volumes in recent years have fluctuated only slightly. Therefore, we will assume that figures for 1975 will not significantly differ from the 1974 figures.

16. Applying the results of the WU study (one quarter's actual results) to the 1974 figures, it appears that approximately 5.6 million messages of the total are routed (WU transfers plus IRC pickups) and 3.0 million unrouted; or roughly two-thirds and one-third, respectively. Further, of the total outbound traffic, 3.9 million messages were handled by WU and the balance directly by the IRCs. Of the traffic handled by WU, 76.5% is unrouted and 23.5% routed. It is to the approximately 3.0 million unrouted messages that the formula applies and for which we must provide an equitable method of distribution in the public interest. As is apparent from these figures, unrouted traffic continues to represent a substantial portion of outbound traffic and the equitable division thereof a matter of consequence to the IRCs.

12

17. Table 1 shows a summary of the results of the WU study broken down for each carrier plus the figures reported by the IRCs in their Supplemental Comments for traffic directly picked up by them.

TABLE 1

Number of Outbound Messages
(WU Study)

Carrier	FTC	ITT	RCA	TRT
WU Transfers:				
Unrouted				
Exclusive	-	20,552	252,152	3,686
Non-Exclusive	-	58,204	79,332	5,852
Total:	-	78,576	331,484	9,538
Routed	503	69,328	64,179	10,740
Total Transfers	503	148,084	395,663	20,278
Direct Pickups:	[11,375]	363,272	361,216	60,639
Total Traffic	11,878	511,356	756,879	80,917

Carrier	US-L	WUI	OTHER (CNR&CPL)	ALL
WU Transfers:				
Unrouted				
Exclusive	1,459	149,977	-	427,826
Non-Exclusive	-	110,943	5,413	259,744
Total:	1,459	260,920	5,413	687,570
Routed	29	65,774	0	210,553
Total Transfers	1,488	326,694	5,413	898,123
Direct Pickups:	[737]	276,554	0	1,073,793
Total Traffic	2,225	603,248	5,413	1,971,916

Notes on Table 1:

Wu reported combined Unrouted Non-Exclusive traffic for all carriers. Allocation has been made on the basis of the relative distribution of traffic at the WU minneapolis distribution office.

FTC and US-L did not supply information on their direct pickups. The bracketed figures shown for these carriers were calculated by applying the WU study results to the figures shown in their respective Section 43.61 responses.

From the study, it can be seen that RCA receives more unrouted traffic (48.2%) under the formula than any other carrier, while overall it receives only 38.4% of total traffic and 30.5% of routed WU transfers. ITT, on the other hand, receives slightly more (32.9%) routed WU transfers; but receives only 11.4% of unrouted transfers. Additionally, ITT picks up slightly more traffic directly from the public than does any other IRC (33.8%). WUI receives 30.6% of total traffic and 25.2% of routed transfers; but receives the second largest amount of unrouted transfers (37.9%). The situation with respect to TRT is equally dramatic. TRT's share of routed transfers is 5.1% and its share of direct pickups 5.6%. Yet TRT receives only 1.4% of unrouted traffic. Thus, under the present formula, it is apparent that for all carriers there is no relation (either direct or inverse) between a given carrier's handling of routed traffic and its handling of unrouted traffic.

18. The significance of this, and the importance of unrouted traffic, can be seen by comparing the overall market shares of the IRCs with their shares of routed traffic only:

TABLE 2

Carrier:	(1) Share of Routed WU Transfers	(2) Share of Direct Pickups	(3) Share of Total Routed (1+2)	(4) Share Overall (%)
FTC	0.24	1.06	0.92	0.60
ITT	32.93	33.83	33.68	25.93
RCA	30.48	33.64	33.12	38.38
TRT	5.10	5.65	5.55	4.10
US-L	0.01	0.07	0.06	0.11
WUI	31.24	25.75	26.65	30.59
OTHER	-	-	-	0.27

As can be seen by comparing columns 3 and 4, there is a substantial difference between a carrier's handling of routed traffic and its handling of traffic overall. The difference between column 4 (overall share) and column 3 (share of routed) is the inclusion of unrouted traffic. RCA and ITT handle roughly equivalent levels of routed WU transfers and direct pickups but, when unrouted traffic is included, RCA's overall share dramatically increases. A similar phenomenon exists as between WUI and ITT. Overall, WUI handles significantly more (30.6%) traffic than does ITT (25.9%); but if unrouted traffic is eliminated, the situation is reversed. ITT handles 33.7% of routed traffic while WUI handles only 26.6%. Another interesting phenomenon shown by Table 2 is that the carriers' relative shares of routed WU transfers (column 1) correspond closely with their shares of direct pickups (column 2); in both categories.

ITT receives more routed traffic than does any other carrier. It is only when unrouted traffic is considered that the carriers' relative market positions change and ITT drops to third. 12/

19. The distortions in the present distribution may also be seen by the number of destinations to which one or another carrier receives all unrouted traffic (referred to as an exclusive point). From the data in Table 1, it appears that 62% of WU transfers and 25% of total outbound traffic falls into this category. Of the 52 destination subareas recognized by the formula, 46 are exclusive points for gateway-originated messages and 24 are exclusive points for hinterland messages. Since to most of these subareas some or all of the other IRCs handle routed traffic, these figures also indicate the lack of relationship between a carrier's handling of routed traffic and its handling of unrouted. Further, Table 1 also shows the extent to which RCA and WUI benefit from the existence of exclusive points. RCA receives 59% of all unrouted exclusive traffic, WUI receives 35%, while ITT receives less than 5%, and the other carriers each receive less than 1%. RCA receives virtually all unrouted traffic from both the gateways and hinterland to all subareas of Area C (Pacific). Additionally, RCA receives most unrouted traffic from the hinterland to subareas of Area A (RCA receives only routed traffic from the gateways to Areas A and B). WUI receives the bulk of gateway traffic to most areas of Area A, as well as some hinterland traffic and all unrouted to most points in South America. ITT receives most gateway traffic for Caribbean points and a few European points (including one high-volume point, France). TRT receives all unrouted only to the Bahamas, British Honduras, and Columbia. Proportioned distribution is in effect for only 15% of total traffic. If one considers that at its inception the present formula called for proportioned distribution of virtually all unrouted traffic, it is readily apparent that the present distribution has departed significantly from the drafters' intent.

12/ We have focused here only on the three largest carriers, since the figures indicate that the relative positions of the smaller carriers are affected only slightly by the distribution of unrouted traffic. Under the formula, TRT does not receive unrouted traffic to many of its service points, since they were added after the formula was prescribed. FTC does not receive any unrouted traffic at all. US-Liberia receives unrouted traffic to Liberia which is its only service point. Consequently, the unrouted traffic volumes of these carriers are too small to affect significantly the overall industry traffic statistics.

20. The serious distortions in distribution patterns noted above evolved over 30 years of formula operation and resulted from a structural weakness in the formula itself. This weakness is the interrelationship of the balancing provisions and the overall direction that a carrier receive all traffic specifically routed via it. Since the formula sought to keep market shares static, it provided that a carrier which increased its proportionate share through routed traffic had to give up an equivalent amount of unrouted traffic so as to restore overall balance. Conversely, if its share declined, it was to receive additional unrouted traffic. In theory, this mechanism would offset any fluctuations in the market. However, because a carrier is always to receive its routed traffic irrespective of its quota, it is apparent that the balancing provisions would work only so long as conditions in the industry did not deviate significantly from those in the base year. Experience under this formula early indicated, however, that conditions were not static and that the balancing provisions were inadequate to deal with the dynamics of the industry. The IRCs expanded their gateway operations, and self-generated traffic (by definition specifically routed) became a more important part of total traffic than it was during the base year. The rapid increase in gateway-originated traffic upset the delicate balance needed for the formula operation and caused a proportionate decline in the relative amount of unrouted traffic available to redress imbalances. This led to the emergence of the "overages" and "deficiencies" which have plagued formula administration since its inception and led to the effective demise of the proportionate distribution system.

21. An overage occurs when a carrier exceeds its quota solely through routed traffic. A deficiency occurs when a carrier receives insufficient routed traffic to satisfy its quota. Since a customer routing is inviolable, it is obvious that giving up unrouted traffic would not bring a carrier with an overage back to its quota. Conversely, unless routed traffic were taken away from such a carrier, the unrouted traffic pool would be insufficient to restore a deficient carrier to its quota. To deal with this dilemma, the IQB adopted two policies which it hoped would restore the overall balance. First, over the objections of ITT, the IQB set an overage (or deficiency) in a carrier's gateway quota for traffic to a particular subarea against a deficiency (or overage) in its hinterland quota for the same destination. Second, if this failed to restore balance, the IQB accumulated the resulting net overage or deficiency from year to year. This was apparently done in the hope that, over time, the imbalances would cancel each other. In practice, however, this resulted only in the accumulation of ever higher imbalances. The pleadings of the parties allege that at present RCA has accumulated deficiencies of $49.8 million while ITT has accumulated overages of $24.6

million and WUI overages of $24.8 million. From the history of formula operations it appears that absent an unforeseen change in market conditions, these imbalances will never correct themselves.

22. We find the accumulation of large overages and deficiencies as evidence that the formula failed to keep market shares static. As such, we do not accord them any independent legal significance. They are merely bookkeeping entries which document the shift in filing traffic from WU to IRC public offices. This is not to say, however, that these imbalances are without importance. They have played a key role in bringing about the distortions in the present distribution we noted above. It is one of the ironies of the formula that a deficiency, which on the surface appears to be a detriment, is in reality a benefit; while an overage is a detriment. RCA has accumulated substantial deficiencies during the operation of the formula; but the result has been not a decline in its relative market share. Rather, its overall share has increased due to the unrouted traffic it receives under the formula. RCA receives this traffic largely because of its accumulated deficiencies. ITT, on the other hand, has accumulated large overages overall and, consequently, receives little unrouted traffic. As deficiencies and overages appeared, the formula provided that the distribution be altered periodically to increase or decrease, respectively, a carrier's share of unrouted traffic. As this process continued, the ultimate effect was that the carrier with the largest deficiency eventually came to receive all unrouted traffic to a given destination.

23. In its Supplemental Comments, WUI claimed that ITT's arguments concerning the formula's disincentive to competition were fallacious. ITT had argued that the balancing provisions discourage carriers from seeking to improve service. WUI, however, noted that only 226,674 messages out of a total outbound volume of 1,938,828 messages or 11.7% 13/ are presently subject to the balancing provisions. Therefore, WUI argued that,

13/ WUI based its calculations on the results of the WU study and IQB figures. It took the total number of messages reported during the study period for nonexclusive destinations and compared them with the total volume reported for all destinations. These figures are broken down as follows:

Carrier	World
ITT	94,080
RCA	78,414
TRT	2,200
WUI	52,380
Other	0
Total	226,674

17

the small volume subject to proportionate distribution, it is unrealistic to assume that service quality could be negatively affected by the possibility of lost unrouted traffic. This argument, while reasonable on its face, ignores the fact that the reason little traffic is subject to proporionate distribution is that for most destinations one carrier receives all unrouted traffic. However, at its inception, the formula was designed to preserve proportionate distribution to most, if not all, destinations. Thus, all WUI's figures really show is that distribution under the formula has become distorted.

24. In this connection, however, we wish to note that we are not concerned here whether or not a party can quantify negative impact of the formula. ITT did not claim that the formula has led to an impairment of service quality. At most, it argued that the disincentive discouraged improvements in quality. This is precisely what concerns us about the present pattern of distribution. We cannot ignore the possibility that quality of service could have been improved absent the inequities of the formula. In any event, by placing distribution of traffic on a rational and competitive basis, we can minimize this danger and maximize the possibility of future benefits. For this reason, we believe the distortions in distribution patterns in the present formula are injurious to the public interest and should be eliminated.

25. Besides the general problems which apply equally to all carriers, there are certain special formula provisions which confer benefits on particular carriers to the detriment of the others. These matters are Schedule B, Appendix 1, and the designation of WU offices as WUI public offices.

26. Schedule B of the Formula. This refers to an arbitrary compromise agreement between WU and RCA which while part of the formula, operates outside the quota system. Under this agreement, in addition to its own quotas under the formula, RCA receives a substantial extra block of traffic taken from WUI's quotas destined to certain subareas of Area A (Atlantic). This agreement derives from an earlier (1931) exchange-of-traffic contract between WU and RCA under which RCA transferred to WU all its inbound traffic destined to United States points beyond New York, Washington, San Francisco and Boston (where RCA operated its own offices). WU agreed in return to transfer to RCA all outbound traffic so that, overall, RCA received from WU two outbound messages for every nine inbound messages it transferred to WU. This arrangement was designed to compensate RCA for the fact that it transferred to WU substantially more inbound messages than it received outbound messages. 14/

27. As we noted in our 1943 prescription order, see 10 FCC at 190, Schedule B was intended to redress the competitive disadvantage RCA suffered with respect to WU since, before the merger, it was the only international carrier without significant access to the hinterland market. However, whatever validity Schedule B may have had when promulgated, we can see no justification for its continuance under present conditions. While the provision does not directly affect the volume of traffic any other carrier receives, since the traffic in question comes from WUI's quotas, we believe that there is an indirect effect on those carriers which is against the public interest. Traffic exchange agreements with most foreign administrations operate on the basis of proportionate return. Proportionate return refers to the principle under which an entity carrying traffic into a country receives outbound traffic from that country in the same proportion as it handled the inbound traffic. Since

14/ Since WU did not operate in Area C (Pacific), traffic destined to points in that Area were not covered by the 1931 contract, nor by the later Schedule B.

there are competing circuits to virtually all the points affected by Schedule B, other carriers are competing with RCA for return traffic from those points. Therefore, RCA receives an undue benefit from Schedule B with respect to return traffic. More importantly, we cannot find any benefit to the public in the provisions of Schedule B. There is nothing in the record which indicates that Schedule B is likely to lead to improved service or lower rates; and, since we believe special treatment inconsistent with the public interest, we find that Schedule B should be eliminated from any new method of distribution.

28. After 30 years, we believe that any equities which justified granting RCA this special treatment have been extinguished. Since divestment, all the IRCs have equal access to WU's domestic landlines and all engage in substantial gateway operations. Conversely, WU has no better relationship with one carrier than another. With respect to any pre-merger benefits WU may have enjoyed, the benefits RCA has received under Schedule B since 1943 and WU's withdrawal from international message operations have adequately compensated RCA. The only other justification offered for the provisions of Schedule B -- promotion of use of direct circuits wherever possible -- has similarly been extinguished by changed circumstances. Today, since all IRCs operate both cable and satellite facilities, the putative advantage in RCA's being a radio carrier has disappeared. RCA is a trong competitor in the international message service and does not need special protection. It is in a position to compete with the other carriers for traffic on an equal footing. Therefore, we believe that Schedule B is inconsistent with the public interest in efficient communication service and should be eliminated from the new formula we are prescribing herein.

29. We do not agree with RCA that because Schedule B is a contract which is presently effective, we must recognize its rights thereunder in an amended distribution. Section 222(e)(3) provides that a new distribution must "be, so far as is consistent with the public interest, in accordance with the existing contractual rights of the carriers." 47 U.S.C. §222(e)(3) (1971). The Act by its terms does not require us to recognize existing contracts which we find to be contrary to the public interest. Schedule B is merely another part of the formula and subject to our review in the same way, and under the same standards, as any other part. The fact that RCA denominates it a contract does not alter its status in this proceeding. The present formula as a whole is the result of an agreement of the parties in which each gave up certain rights and gained others and can, therefore, be said to constitute a contract between them. To characterize Schedule B, and

by extension the whole formula, as RCA advocates would render Section 222(e)(3) meaningless, since a new formula would necessarily be inconsistent with "existing contractual rights of the carriers" and could never be changed. We do not believe Congress intended such an absurd result. Rather, to give effect to the apparent intent of Congress, Sections 222(e)(3) must be regarded both as a protection for individual carriers, by requiring us to consider certain of their contractual rights if any amended formula, and as a delegation of authority to us to review those contracts in the public interest.

30. We also note that Schedule B was not in existence before the merger and only became effective upon our prescription of the formula. As we have said, it is an arbitrary compromise and amounts to a reformation of, and replacement for, the 1931 WU/RCA traffic exchange contract. Thus, even if the contract language covers WU's prior contracts, it would not apply to Schedule B, since RCA chose to negotiate a new arrangement with WU to govern their relations after the merger rather than to rely on the protections afforded by the statute. Therefore, RCA cannot now rely on that provision to thwart amendment of the formula.

31. We also regard Section 222(e)(3) as conferring upon us specific power to review contracts between the carriers and to determine whether they continue to serve the public interest. Unlike development of the original formula, amendment does not depend, even in the first instance, upon agreement of the carriers. Any party can invoke our jurisdiction to this end, or we can proceed on our own motion. Therefore, even where a provision takes the form of a "contract" between the parties, the express language of the statute requires that it serve the public interest. Where, as here, we find the provision inconsistent with that interest, Congress gave us in Section 222(e)(3) the power to prescribe a new distribution without regard to its provisions.

32. Appendix One. The concerns expressed above with respect to Schedule B apply equally to Appendix One to the formula. This provision sets forth a special arrangement respecting CNR and CPL and their handling of certain United States-originated traffic, pursuant to pre-merger contracts with Postal. Under this provision, CNR receives traffic to any point routed by the sender over cable facilities which transit Canada. In addition to such routed traffic, CPL also receives sufficient unrouted traffic destined to points in Areas B and C (i.e., the West Indies and

Australasia) so that its proportionate share of such traffic before the merger would be maintained. This arrangement was designed to recognize CPL's rights under exchange-of-traffic contracts it had concluded with Postal and which were still in effect at the time of the merger. CPL stated that it believes it is entitled to receive traffic under this provision by virtue of the pre-merger contract and argues that the new formula should recognize those rights. CNR, however, has indicated it no longer wishes to participate in traffic distributed under this provision since it states that the revenues it receives thereunder are not sufficient to justify its continued participation in the costs of administering the formula. In view of our action herein, we will grant CNR's request to withdraw.

33. We believe that this special arrangement also should be terminated. The original justification for the provision was that the only direct cables serving the affected points landed in Canada. Accordingly, we acquiesced to the arrangement to respect a customer's choice to route his message via cable; even though that required intermediate relays and created a greater potential for delay, which could have been avoided by use of then-available direct radio circuits. The fact that we were then engaged in World War II was an important consideration in our approval of this arrangement. The availability of alternate routing through Canada for messages to Australasia was considered important to the war effort. See 10 FCC at 193. After the war ended, however, that consideration ceased to be a major factor. Moreover, today those points are served by cable and satellite facilities directly from the United States. Therefore, any operational justification for this circuitous routing has disappeared. In this situation, we believe that the public interest will be better served by placing all carriers on an equal footing with respect to this traffic. Traffic arbitrarily awarded under Appendix One could otherwise go to other carriers who have no less claim to it than the Canadian carriers. Therefore, we conclude that Appendix One disserves the public interest. Accordingly, we shall eliminate the arrangement from the new formula.

34. As we have noted, Appendix One was designed to recognize rights under CNR's prior contract with WU and CPL's prior contract with Postal. Therefore, under our analysis, this arrangement, at least insofar as it relates to CPL, is the type of contract Section 222(e)(3) was designed to protect. However, Appendix One, like Schedule B, is a reformation of those prior contracts. Appendix One provides by its own terms that, in the case of any conflict between its provisions and the prior contracts, Appendix One shall control. Accordingly, CNR and CPL must

also be considered to have foregone the protections of Sections 222(e)(1) and 222(e)(3). In any event, Section 222(e)(3) expressly gives us the power to review Appendix One in this proceeding and, since we find it inconsistent with the public interest, to abrogate it in a new method of distribution.

35. Our action herein does not deprive either CNR or CPL of their rights to exchange traffic with WU to any point. These carriers will continue to receive all traffic specifically routed by the sender via their facilities. Further, to the extent that they handle routed traffic to any point, they will qualify under the interim formula for their proportionate share of unrouted traffic. It is only with respect to unrouted traffic which was distributed on an arbitrary basis that our action has any effect. Thus, CNR and CPL are placed on the same basis as all other carriers and can compete with them for all traffic they receive. In this way, we believe that unrouted traffic may be distributed equitably, without undue benefit to any party.

36. As is apparent from our discussion of the interim formula, the right to receive traffic carries with it a consequent responsibility to share in the costs of distribution under it. With respect to CNR, we will grant its request to withdraw from participation in the distribution of traffic under the interim formula, unless and until, it notifies us that is wishes again to participate. Until such time, any traffic specifically routed via CNR will be considered unrouted for purposes of the interim formula. With respect to CPL, we will assume, unless otherwise notified, that it wishes to continue to participate in the distribution under the conditions we have set forth herein.

37. WU/WUI Public Offices. Under the 1963 amendments to the formula, we added a provision which permitted certain WU (domestic) public offices in New York, Washington and San Francisco 15/ to be designated as WUI public offices, so that messages filed in those offices are

15/ Specifically, the formula designates as WUI offices (1) all WU public offices south of 60th Street in the Borough of Manhattan, New York (at present there are three), (2) the main and one branch WU office in Washington (at present there is only one designated office), and (3) the main and one branch WU office in San Francisco (now, only one office). WU Cables did not serve Pacific Points, so there was no WU "gateway" in San Francisco as such. However, WU transferred Pacific-destined traffic to RCA in San Francisco. To allow WUI to begin operations on an equal footing with the other IRCs, we granted its request for a San Francisco gateway as part of the divestment proceeding. See 30 FCC 323, 371-82 (1961).

automatically considered as specifically-routed via WUI. This was done to spare WUI the expense of establishing its own public offices so that it could compete strongly with the established IRCs. ITT and TRT have challenged this provision as unduly favorable to WUI since it thereby continues to be spared the expense of maintaining public offices which the other IRCs must incur. Further, ITT believes this arrangement, due to the similarity between the respective names of the two companies, also fosters confusion among the using public (and some WU employees) as to the routing of international messages. ITT asserts that WUI is now a viable, aggressive competitor and should be required to open its own public offices. In response, WUI denies that it receives an undue advantage from this arrangement. WUI notes that ITT and RCA have more offices (14 for RCA and 10 for ITT) in New York than the three WU/WUI offices (each carrier has one office in Washington and one in San Francisco) and that WUI is barred from opening its own offices by its agreement with WU. Further, WUI asserts that it must pay WU's land-line haul charges for each message it receives through these offices, while the other IRCs do not pay WU for messages filed at their public offices.

38. We are not concerned precisely with the question whether WUI achieves a quantifiable competitive advantage by the arrangement. Whether or not the money WUI saves by not operating its own public offices is offset by the additional landline haul it pays to WU (although we are inclined to believe that it is not), the use of WU public offices as WUI offices is inconsistent with our new policies. The present arrangement was a carefully-drawn compromise which was intended to preserve each carrier's pre-divestment traffic shares in New York while not depriving WUI of former WU Cables traffic or forcing it into early outlays of cash for new offices of its own. See 30 FCC at 377-9. However, we specifically left open the question of future developments without opinion. 16/ During the past 14 years, WUI has become a viable carrier and no longer needs special arrangements to protect its position. We are not persuaded by WUI's argument that it is blocked by its contract with WU from opening its own offices. In connection with its

16/ Western Union Divestment, 30 FCC 323, 382 (1961):

> What will happen in the future will, of course, depend on the competitive efforts and the effectiveness of the carriers. That, however, will be the natural and proper result of operating in a competitive society.

24

counter proposals, discussed above at paragraph 12, WUI Supplemental Comments at p. 8. We find it peculiar that in the one case WUI argues that it is legally unable to open offices; but under the other, it sees no such impediment. We are of the opinion that WUI is under no legal disability with respect to opening its own offices.

39. In reconsidering our approval of the WU divestment, 30 FCC 951 (1961) we stated that

> so long as /WUI/ desires to use the facilities of Western Union and have unrouted traffic filed at designated offices of that company considered specifically routed via /WUI/, it should not be permitted to open additional competing offices of its own in the gateway cities. 30 FCC at 958.

We are not here talking about opening additional offices; but of replacing the designated WU offices entirely with its own offices. Therefore, neither our divestment order, nor the formula prevents WUI from following this course.

40. Further, we believe that there is at least one way in which WUI is presently deriving a competitive benefit from this arrangement. We note that in New York and San Francisco, WUI maintains its own network of customer tielines for international telex; and that it is in the process of reterminating its Washington tielines (as well as the intercity lines between Washington and New York) at its own operating center. 17/ Telex tielines are direct connections between a customer terminal and the WUI telex switch and are essentially automated. Consequently, they require less human intervention than the manning of a public message counter such as those of the other IRCs. It appears, therefore, that WUI is operating its own competing telex network while relying on WU offices for the more labor-intensive message service. This we believe to be a substantial benefit -- particularly since telex customers may also use their tielines to file overseas messages. 18/

17/ While WUI's tielines presently terminate at WU's Washington office, the concentrator to which they are attached is owned by WUI and maintained by WU pursuant to a contract.

18/ We are concerned by the requirement in the WU/WUI contract that WUI pay WU its specified landline haul charge whether or not WU picks up the message. We believe that WU is not entitled to landline haul charges where it has not performed any functions. See All America Cables and Radio, 15 FCC 293, 317 (1950).

While this is not a violation of the formula, we believe the policy reasons discussed above for requiring WUI to choose between using WU offices or its own, but not a mixture of both, should apply here equally.

41. As to WUI's contractual obligation to WU, after 15 years we believe it bad policy for private parties to extend further a contract which is unnecessary and contrary to the public interest. In view of the small volume of message traffic filed through the designated offices, the impact on WU from the loss of its landline haul charges for this traffic will be minimal and will be outweighed by the benefits of increased competition. We note, however, that WU did not address in its pleadings the question of its contract with WUI. Therefore, we will not make any order respecting the disposition of the WUI public offices at this time. We note that under Section 214(d) of the Act, we have the power to require a carrier to open a public office or offices. While we are not now instituting such proceedings, we are prepared to do so if that becomes necessary. In connection with this matter, we have included in Section IV of the interim formula a provision labeled "special interim provision for WUI" continuing the essentials of the present WU/WUI arrangement. Upon the opening of new WUI offices, we shall amend the formula to remove the interim provision.

III. SUMMARY AND CONCLUSIONS

A. The Present Formula

42. In determining whether the present distribution meets the statutory standard, Section 222(e)(3) requires us to look both at private interests and at the public interest. It is clear that the various carriers have a legitimate and protected interest in assuring that their share of traffic under the formula be equitably determined. Since the formula governs relations between competitors, it is more difficult to measure its impact on the public. However, we believe that for purposes of this proceeding an appropriate general statement of the public's interest is the statutory requirement that we guarantee residents of the United States a rapid, efficient communications service with adequate facilities and reasonable charges. 47 U.S.C. §151. We believe

26

the market-sharing features of the present formula are ill-designed to advance this statutory goal. In the early days of international telegraphy, and particularly when cable carriers and radio carriers were separate entities, there was a vigorous competition which benefitted the public in the form of increased service coverage and substantially reduced rates. Today, in services such as telex and leased channel there is still a vigorous competition. The disappearance of radio/cable competition and the institution of the formula significantly blunted, although did not eliminate, competition in message service. The charges for message service have not increased substantially, but there has been no stimulus under the present formula to improve service or increase efficiency. In this situation, we believe that the public is ill served by a formula which stifles user choice.

43. In the designation order, we directed the parties to provide information concerning the effects on them, as well as the public, of any defects in the present formula (issue 3). From the responses to that issue, it is apparent that, like the effect on the public, the effects on the carriers of the matters we considered above are impossible of concrete quantification. The inequities we outlined above did not occur suddenly; but evolved over time and were the result of interacting forces. While this situation renders quantitative determination of the effects on individual carriers and the public exceedingly difficult, if not impossible, we believe the record before us as well as elementary logic clearly warrants the conclusion that both the individual carriers and the public have been harmed by the formula's denying a carrier unrouted traffic. The carriers so affected have seen their marketing efforts essentially nullified by the balancing provisions -- ironically, the more successful those efforts have been, the more the carrier has been penalized. The formula's arbitrary disregard of the public's role has thwarted its expectations and may have resulted in an improper allocation of resources. Accordingly, we have concluded that those who have been injured are entitled to relief.

B. The New Method of Distribution

44. In view of the foregoing, we have concluded that the present formula should be repealed. Since the special circumstances which prompted creation of the present formula more than thirty years ago no longer exist, we believe that traffic should be distributed on the basis of customer choice. In this way, the public interest will be best served, since the public will make its own decisions. WU and OT suggested that customers be required to specify the routings. While we agree in principle that we should proceed in this direction, we do not believe that the record presently before us is adequate to adopt this method at this time.

45. Although the parties were not notice that we would consider a requirement for specific routings, neither the proponents nor the opponents of this method addressed the legal or economic issues raised thereby. Consequently, we are unable at this point to determine the extent of the economic burden which would result from a requirement for specified routings, or the proper sharing of that burden between WU and the IRCs. The results of the WU study show that in 1974 approximately 3.0 million messages or some 35% of all outbound international traffic was unrouted. The study also indicates that a large number of customers either do not care to route their messages or that they are not familiar with the different IRCs, since three-fourths of WU transfers are unrouted. We believe that this is because the IRCs have not effectively sought to reach these users and that this failure may prevent the efficient operation of a customer-routing system at this time.

46. Because of the apparent unfamiliarity of users with the IRCs or their respective merits, required customer routings will require that such users be informed of their choices at the time of filing. For nearly half of all customers who file overseas messages, the only carrier with which they have contact is WU. Therefore, until IRC advertising can become effective, WU employees will be required to provide users with this information. Because of the number of customers involved, we believe this may place a substantial burden on WU. None of the parties considered the increase in WU's costs which would follow from this expanded role, or the effect of that increase on the users of both domestic and international service. To assure that no prejudice will result, we

28

are of the opinion that suitable instructions and operating arrangements, agreeable to all concerned, are needed to guide WU in presenting the public a mandatory choice among IRCs. The information now before us, however, is insufficient to prescribe those instructions or operating arrangements.

47. To gather the information we need for decision, we will direct the interested parties to address the matters we have discussed above, as well as any matters they choose to raise, concerning the implications of the all-routed approach and the means to implement it in an expeditious and orderly fashion. In the interim, we will prescribe a distribution of outbound traffic on the basis of the formula in the Appendix hereto. While we are considering the carrier responses, the interim formula will provide an equitable means of distribution which will focus on customer selection and give the IRCs a chance to solicit routings. In this way, the eventual role of WU in the informational and operational process will be reduced; as will the potential for unfair advantage to any party from that role. We expect that the IRCs will use this period to expand their solicitation efforts, so that the customer routing system will work smoothly and efficiently. Further, we expect the parties during this period to work out mutually-agreeable procedures for implementation of the all-routed distribution system so that we can avoid later controversy on this point. Should the parties fail to agree on such procedures, however, we stand ready to prescribe them if that becomes necessary.

48. Interim Formula. In developing the interim formula, we have sought to eliminate complexities which have made the present formula difficult to administer and a source of controversy. For this reason, the interim formula treats all classes of messages as a whole, rather than individually as at present. For the same reason, we see no need to continue separate gateway and hinterland quotas. Rather, the interim formula recognizes only two categories of traffic -- routed and unrouted. WU will continue to distribute specifically-routed traffic to the designated carrier. Unrouted traffic will be distributed pursuant to a simplified quota system for all traffic wherever it originates in the United States. Further, we are discarding the concept of "gross international tolls" as a basis for calculating a carrier's quota. Random distribution of messages as they are filed will, over the long run, insure that each carrier receives a fair share of revenues. We will also delete the balancing provisions, since there is no longer any need for them. This will also eliminate the chief cause of the distortions in the present distribution and prevent the future accumulation of overages and deficiencies. Under the new formula, any short-run imbalances which may occur due to

traffic variations will correct themselves over time. One important feature of the interim formula is the provision for adjustment of the carriers' quotas. This will permit distribution to remain closely tied to changing conditions and assure that the present distortions do not recur.

49. Under the interim formula, a carrier is entitled to receive unrouted traffic to all points it is authorized to serve. ITT had proposed that unrouted traffic be distributed on a country-by-country basis among those IRCs authorized direct circuits to each such point. TRT, on the other hand, would base distribution on the points a carrier tariffs, whether served by direct circuit or through interconnection. We believe that ITT's proposal in this regard is not suited to our overall goal. Beyond the problem raised by RCA of defining a "direct circuit" (which ITT does not address), basing distribution solely on direct circuits would leave significant gaps in providing for the handling of traffic. This is because there are numerous destination points in the world which no carrier serves directly. Under the ITT proposal, there would be no provision for unrouted traffic to these points.

50. More fundamentally, however, we take exception to the philosophy underlying ITT's proposal. ITT, which has advocated competition throughout this proceeding, here seeks to limit competition. The effect of this proposal would be to deny small carriers, such as TRT or FTC, significant unrouted traffic, since those carriers serve a higher percentage of their service points through intermediate connections. We cannot find a justification in the public interest to so limit competition in this area. Since all carriers compete for traffic irrespective of routing, the only appropriate criteria are whether a carrier tariffs a destination point -- since a carrier may tariff only those points it is authorized to serve -- and whether a carrier handles routed traffic to a point. Therefore, eligibility for a quota will be based on the points each IRC lists in its tariff as of the release date of this order. If a carrier adds new service points, it will receive unrouted traffic to those points to the extent that it handles routed traffic. In this way, distribution can be updated to keep it in touch with changing circumstances. By limiting adjustments to six-month intervals, WU can be certain of its responsibilities and be spared the need for too-frequent changes in its distribution practices.

51. ITT and TRT also disagree on how to compute the volume of unrouted traffic to each destination an eligible carrier is to receive. ITT proposed that the volume be calculated on the basis of each eligible

30

carrier's share of WU transfer traffic (gateway and hinterland). TRT, on the other hand, argued for distribution based solely on hinterland WU transfers in the belief that inclusion of gateway-originated traffic (including direct pickups) favors the New York carriers. We believe that the volumes should be based on all routed traffic, wherever originating in the United States. This includes direct pickups, direct access, and routed WU transfers. This is the most likely way to achieve the goal of distributing unrouted traffic on the same basis as routed. Direct pickups are by definition specifically routed and represent a significant portion of overall traffic. Therefore, to ignore such traffic would be unrealistic and contrary to our overall policy herein.

52. Looking beyond the features of the new formula, we will dispose of some remaining matters starting with WU's request that it be relieved of distributing traffic among the IRCs. While we are sympathetic to WU's desire to simplify its role, we cannot agree that it should be totally relieved of its responsibilities under the new formula. WU receives significant revenues from its participation in through international message service, so it cannot say that it has no interest in such traffic. Therefore, we have declined to accept its proposal to turn over all traffic to the IQB for distribution. Since WU receives the traffic from the public, it is in the position most expeditiously to effect distribution. Turning traffic over to the IQB would merely introduce an extra level of processing which would increase the risk of delays and increase distribution costs. The elimination of multiple categories, origin points, etc., outlined above will allow WU to streamline its operations and decrease its costs. We agree with WU that it should be reimbursed for the reasonable costs it incurs in effecting distribution; but do not believe it should receive a profit for its function. As we have noted, WU receives payment for its landline haul; we see no reason for it to receive a second payment from formula administration for the same traffic -- beyond its out-of-pocket expenses. We anticipate that IRC solicatation of international traffic under the new formula will reduce the amount of unrouted traffic that WU must handle. Thus, its function will be further simplified as that process occurs. Finally, we see no reason why WU cannot automate the handling of traffic under the new formula if it believes that will be in its interest. Accordingly, we will continue to require WU to make the distribution of traffic under the new formula.

53. Accumulated Overages and Deficiencies. We turn now to a matter of particular contention among the parties -- the disposition of the accumulated deficiencies and overages. RCA asserts that legally and

as a matter of equity it must be compensated for its deficiencies. As we indicated above, however, we agree with the other parties that these are no more than statistical records which indicate the structural weakness of the present formula. RCA does not state why it believes that deficiencies represent a legal obligation in which it has a vested interest. Neither Section 222, nor the formula itself, directs the accumulation of deficiencies or overages. In our order prescribing the formula we did not consider the question. RCA appears to be asserting that its quotas give it a claim to a guaranteed amount of traffic. The present formula does not guarantee any carrier that it will receive traffic. As more customers routed messages and the unrouted pool shrank, traffic available for distribution became inadequate to satisfy quotas. Such changes in the marketplace can hardly be said to have wronged RCA -- particularly since its own increase in self-generated traffic and the benefits it received under Schedule B contributed to this process. Similarly without merit is RCA's contention that it has an equitable claim to compensation because it complied with the formula in good faith. The present formula is a legal obligation on the parties and compliance with its provisions is mandatory. Accordingly, we believe that the accumulated overages and deficiencies should be cancelled, without compensation, and that distribution under the new formula should be made without reference thereto.

54. Administration. The simplest method for handling the day-to-day administration of the interim formula will be to continue to rely on the IFC and the IQB. However, if the IFC is satisfactorily to perform its functions with respect to the interim formula, all interested carriers must be equally represented on it. Presently, FTC and CPL have no representation on the IFC. Since those carriers have an interest in the interim formula they should be represented. Accordingly, we will expect that upon application FTC and CPL will be admitted to the Committee with the full rights and responsibilities of membership, including participation in the costs of the Committee and its functions.

55. As mentioned above, ITT presently has four votes on the IFC and RCA has two, while all others have one each. This situation resulted from the fact that these companies owned constituents which operated in different areas, employed different media, or provided different services. We must now recognize that those entities either no longer exist (having been merged into one company) or are under common ownership. To make the IFC a viable tool for supervising the interim formula's operations, we believe that we should recast it so that all interested members

32

have one vote each. The parties in their response to WUI's proposal in this regard indicated no opposition to equalization. Under Section 222 (e)(3), we have the power to repeal the present formula, which would terminate the IFC, and to prescribe a new formula and create a new committee with equal representation. We believe that we can legally accomplish the same result by restructuring the present committee. As before, all costs incurred by the IFC in administering the interim formula shall be borne by the members in the proportions they receive traffic under it. 19/

56. The interim formula shall become effective on February 1, 1976. The Initial quotas shall be determined by the IQB on the basis of the WU 13-week study and the information supplied by the IRCs in this proceeding. 20/ Inasmuch as no party has raised any objection to this information, and all have agreed to its use, we believe it will represent an equitable basis on which the IQB can make the necessary calculations and issue the appropriate distribution instructions to WU. The IQB shall calculate the initial quotas of unrouted traffic for each country of destination by determining from the above information the number of routed messages (as defined in Section IV of the interim formula) to such destination handled by each IRC. The individual carrier figures will then be totaled for each destination and each carrier's figures compared to that total. The resulting ratios will represent each carrier's share of routed traffic for each destination point and, therefore, its

19/ A companion proceeding in this docket was instituted to consider a request by WU for increased payments for its domestic handling of overseas message telegrams (landline haul). By Memorandum Opinion and Order in this proceeding, 55 FCC 2d 96, reconsideration granted in part and denied in part, 55 FCC 2d 382 (1975) (Docket No. 19660), we approved as a basis for terminating that proceeding a settlement agreement entered into by the parties under which WU's landline haul divisions for full-rate messages were increased from 6.5¢ per word to 9.5¢ per word (with corresponding lesser increases for lower classes of service). Our order amended Schedule C of the present formula by substituting the new divisions. Our action herein does not affect this provision other than to change its designation to Schedule A to reflect the fact that the two preceding schedules have been replaced.

20/ As noted, FTC and US-Liberia did not provide information concerning their direct gateway pickups during the study period. Therefore, we will direct each of these carriers to file by January 10, 1976, with the other IRCs, the IQB, and the Commission data on all traffic it picked up directly during the period December, 1974 through March, 1975. These responses shall be presented in the same format as that in the WU 13-week study and in the other IRC reports.

quota of unrouted traffic under the interim formula to that point. For purposes of these calculations, the IQB will employ the applicable destinations as shown in the WU 13-week study. WU will then begin distributing unrouted traffic on the basis of these percentages on February 1, 1976.

C. Canadian, Mexican, Newfoundland Formulas

57. There is an additional matter which while not directly in issue in this proceeding, we believe appropriate to address. Section 222(e)(2) of the Act, requires a separate formula to govern distribution of outbound message traffic to Canada and Mexico. This was done to reflect the fact that under Section 222 Canada, Mexico, Newfoundland, and St. Pierre-Miquelon are considered domestic points. Pursuant to this requirement, formula for Canada and Mexico were agreed upon and prescribed by us, 10 FCC 184, 193-4 (1943). In addition to these, a separate formula was developed also for Newfoundland traffic. In its original request, ITT did not raise, and the respondents did not address, the question whether any change in these formulas is needed. However, we have decided to review these matters on our own motion.

58. The Canadian, Mexican and Newfoundland formulas do not present the same questions of arbitrary market division or special benefits we have examined above in connection with the international formula. The Canadian formula, for example, was designed primarily to preserve after merger, CPL's rights under its prior exchange-of-traffic contracts with Postal. (WU had exchanged traffic with CNR). The formula contained no cumbersome quota system and provided for periodic adjustment to keep its provisions in touch with developing circumstances. However, it now appears to us that this formula is unnecessary, since it appears that CNR and CPL no longer provide duplicating services. This being the case, there would be no opportunity or desire on the part of WU to discriminate between the two carriers. Therefore, we will repeal the Canadian formula.

59. It appears that a formula for Newfoundland traffic has similarly become unnecessary. The original reason for a separate formula for this point was to preserve to Commercial Cable Company (one of the

34

predecessors and constituents of ITT) the pre-merger traffic which it handled to Newfoundland over its transatlantic cable and to preserve CPL's rights under its Postal contracts. Since then, however, that cable has been taken out of service and CPL no longer serves Newfoundland. Therefore, there appears no longer to be a need for this provision. Accordingly, we will repeal this provision as well.

60. The Mexican formula also appears to be unnecessary. The purpose of the formula was to accommodate two then-existing factors. First, WU turned over Mexico-bound traffic both to the Mexican administration and to the Mexican Telegraph Company. This latter company, a joint venture of WU and an ITT predecessor, operated both within Mexico and between Mexico and the United States. It was felt necessary to provide for dividing traffic between the two entities providing service to Mexico. However, the Mexican government nationalized the Mexican Telegraph Company in 1949 and has unified all telegraph operations in one entity. WU today turns all unrouted traffic over to that entity. Second, prior to the merger, TRT and RCA also operated circuits to Mexico (connecting with the Mexican government lines). The Mexican formula preserved these operations after the merger and directed WU to turn over all traffic specifically routed via these carriers. We believe there is no need to continue a separate arrangement for Mexico. Rather, we will require WU to continue honoring RCA and TRT specific routings. All unrouted traffic will be turned over to the Mexican entity. We wish to emphasize, however, that our action does not relieve WU of its obligation to treat all carriers in an equitable and non-discriminatory manner in distribution of outbound traffic.

D. Maritime Formula

61. Comsat General has asserted that the present formula under which telegraph traffic between points in the United States and ships at sea is presently distributed will not be suitable upon introduction of maritime satellite facilities; and requests that a separate inquiry be initiated to consider the need for revision of the maritime formula as well as specific proposals for such revision. We note that

ITT in its original petition did not address the maritime formula and that the inquiry herein was limited to the formula covering overseas telegraph messages. See 43 FCC 2d 1174. Consequently, the parties were not directed to address the merits of the maritime formula. However, we note that, like the formula under consideration, the present maritime formula is based on a quota system tied to market shares in a pre-merger base period (in this case, 1938). Therefore, the objections we have expressed with respect to market-sharing devices in the international formula may apply to the maritime formula as well. In this situation, we agree with the parties who have commented on the subject that it would be appropriate to examine the maritime formula and that this should be done in a separate proceeding. Accordingly, we will by separate order direct all interested persons to file comments on the continued reasonableness of the maritime formula.

62. In summary, we have concluded that the public interest in the provision of international telegraph services will be best served by relying primarily on consumer choice for the distribution of traffic among the several international record carriers. Due to certain unresolved questions concerning possible operational, economic and legal implications, we will not prescribe that all international telegraph traffic must be specifically routed by the customer. As an initial measure, we shall prescribe a formula which distributes unrouted traffic among the carriers in direct proportion to their share of routed traffic. By thus rewarding the successful competitor -- rather than penalizing him as does the present formula -- we expect a more aggressive marketing effort and a consequential reduction in unrouted traffic. Meanwhile, we are soliciting prompt comments concerning the operational, economic, and legal implications of an all-routed distribution in order that we may reach an early decision concerning whether the public interest would be served even better through this means.

63. Accordingly, IT IS ORDERED, Pursuant to Sections 1, 4(i), 4(j), 201, 222(e)(1), 222(e)(3) and 403 of the Communications Act of 1934, as amended, that the formula prescribed by the Commission in 1943 pursuant to 47 U.S.C. §222(e)(1) (1971) governing distribution by The Western Union Telegraph Company among the international record carriers of outbound, unrouted international message telegraph traffic, and all prior amendments thereof, is (with the exception of Appendix 2) hereby REPEALED, effective March 1, 1976;

64. IT IS FURTHER ORDERED, Pursuant to Sections 4(i), 4(j), 201, 222(e)(3) and 403 of the Communications Act, that the parties to the formula inquiry are directed to file, and any interested person may file, on or before March 26, 1976, comments on the legal, economic

and operational implications of distributing outbound, unrouted message telegraph traffic on the basis of required customer routings and the means by which transition to such a method may be efficiently made; replies to the above comments may be filed on or before April 23, 1976;

65. IT IS FURTHER ORDERED, That the interim formula set forth in the Appendix hereto is hereby PRESCRIBED as the formula for distribution of such outbound traffic and shall be followed from March 1, 1976 until further order of the Commission;

66. IT IS FURTHER ORDERED, That distribution of traffic under the interim formula prescribed herein shall be based initially on the respective international record carriers' shares of such traffic derived from the information supplied by the carriers in this proceeding and the results of the study of outbound traffic conducted by The Western Union Telegraph Company; in this connection, French Telegraph Cable Company and United States-Liberia Radio Corporation shall file with the Commission and the International Formula Committee/International Quota Bureau on or before January 20, 1976, the number of outbound international telegraph messages picked up by them directly during the period of the Western Union study, broken down by destination according to the format used in that study;

67. IT IS FURTHER ORDERED, That the formulas prescribed by the Commission in 1943 pursuant to 47 U.S.C. §222(e)(2) governing distribution of outbound, unrouted message telegraph traffic between the United States and Canada, Newfoundland, and Mexico, respectively, are hereby REPEALED: The Western Union Telegraph Company shall distribute such traffic in a fair and non-discriminatory manner which will, to the extent possible, honor the choice of the customer in designating the carrier to which such traffic is to be transferred; and

68. IT IS FURTHER ORDERED, That the requests of RCA Global Communications, Inc. and Western Union International, Inc. for the convening of oral evidentiary hearings in this proceeding are hereby DENIED.

FEDERAL COMMUNICATIONS COMMISSION *

Vincent J. Mullins
Secretary

Copy of Separate Statement of Commissioner Hooks attached.

APPENDIX

Formula, Pursuant to Section 222(e)(1) of the Communications Act, for the Distribution of Outbound International Message Telegraph Traffic Handled by the Western Union Telegraph Company, As Amended Through December 22, 1975.

This formula, pursuant to Section 222(e)(1) of the Communications Act of 1934, as amended, provides the method for distribution by The Western Union Telegraph Company (hereinafter referred to as Western Union) among international telegraph carriers of outbound international message telegraph traffic handled by it within the Continental United States, as that term is defined in Section 222(a)(10) of the Communications Act.

The traffic for which distribution is provided herein is all message telegraph traffic by wire or radio, specifically routed or unrouted, handled by Western Union originating in the continental United States, provided, however, that quotas established in Section V hereof shall not apply to the non-message or measured services offered by the carriers, nor to marine (shore to ship) traffic handled by Western Union with respect to the distribution of which a separate formula is annexed hereto as Schedule B.

II. Interested Carriers

The international carriers interested in the distribution of traffic provided for in this formula will be the following (unless and until other international carriers enter business):

Canadian Pacific, Ltd.
French Telegraph Cable Company
ITT World Communications Inc.
RCA Global Communications, Inc.
TRT Telecommunications Corp.
U.S.-Liberia Radio Corp.
Western Union International, Inc.

In general, an international carrier is interested in the distribution of traffic provided for herein whenever it handles routed traffic to a destination point under the conditions set forth in Section V, below.

III. Specifically-Routed Traffic

The right to receive a quota under this formula shall not purport in any manner whatsoever to limit or to restrict a carrier's scope of future operations; and a carrier shall always be entitled to receive its specifically-routed traffic to all destination areas, if it accepts such traffic in pursuance of its published tariffs and transmits it to an overseas point.

IV. Categories of Messages

For purposes of calculating the quotas specified in Section V, below, all categories or classes of traffic shall be considered in the aggregate with one quota covering all classes of message telegraph traffic.

Notwithstanding any provision in this formula to the contrary, Western Union and all international carriers shall respect specific routings of any messages handled by it, and shall transfer to another carrier any messages specifically routed via such other carrier. All international messages delivered by Western Union shall carry in the preamble the agreed upon "via" of the international carrier which transferred the message to Western Union. Messages shall not be considered specifically routed by virtue of the use of a particular carrier's telegraph blank. For purposes of, and whereever used in, this formula, a message shall be considered specifically-routed via a particular carrier in any of the following cases:

(a) Where messages are filed at an office established, operated, and maintained by an international carrier, whether filed in person, by messenger, by telephone, or received over a tieline or other directly-connected facility terminating in such office, unless the customer specifically routes such messages via a carrier other than the carrier maintaining such office (direct gateway pickup);

(b) Where messages are filed directly with a particular international carrier at its gateway office by means of domestic communications networks such as domestic telex, TWX, telephone, or mail, or by messenger so long as the customer pays all charges incurred in connection with the use of such means for the purpose of filing international messages (direct access);

(c) Where messages are filed with an international carrier by a customer located outside that carrier's gateway city by means of a tieline or other directly-connected facility terminating in that carrier's gateway office, so long as the costs for establishing, operating and maintaining such facility are borne by the customer (hinterland tieline);

(d) Where messages are filed with Western Union at any of its offices (except those specified in (e) below) or by other means of filing provided for in the Western Union tariff, and transferred by Western Union to an international carrier over Western Union's landline system, so long as the following conditions are met:

(i) if, when filed in person, the specific routing is written in by the sender,

(ii) if, when filed by messenger, the message contains a specific routing which has been previously inserted by the sender (Messages shall not be considered specifically routed merely by virtue of the use of a particular carrier's telegraph blank),

(iii) if, when filed by telephone (whether to a Western Union office, an agency office, or to a Western Union Central Telephone Bureau), a specific routing is inserted by the receiving clerk at the unsolicited request of the sender, or

(iv) if, when filed over a tieline or other directly-connected facility, the specific routing has been transmitted by the sender; and

(e) (Special interim provision for Western Union International, Inc.). Messages shall be considered specifically-routed via Western Union International, Inc. when they are filed, without specific routing via another carrier having been designated by the sender, at all offices of Western Union located in the area south of 60th Street in the Borough of Manhattan, New York; the main office of Western Union in San Francisco, California; and the main office of Western Union in Washington, D. C. (all the above of which shall be considered as Western Union International public offices for purposes of this Section).

Traffic specifically routed by the sender via a particular carrier and destined to points not tariffed by that carrier shall be considered unrouted and shall be distributed in accordance with the provisions of Sections V and VI below.

But nothing in the foregoing shall be construed as requiring any international carrier to accept, over tieline facilities furnished to its customers by a particular carrier, messages which are routed by the sender via another international carrier.

V. Quotas

For outbound, unrouted international telegraph messages destined to particular international points, originating at points within the continental United States handled by Western Union, there shall be for each international carrier a quota of such traffic calculated without consideration either of the category 1/ or length of the message. An international telegraph carrier is entitled to receive from Western Union unrouted traffic under this formula picked up by Western Union for each overseas destination point listed in that carrier's effective outbound message telegraph tariff as of the release date of the order prescribing this

---

1/ The categories of service recognized by the parties to which this formula applies are those shown in Schedule A of this formula.

formula, whether that carrier serves such point directly or by interconnection; and, thereafter, a carrier shall be entitled to a quota for each additional destination point which that carrier is authorized by the Federal Communications Commission to serve directly. As determined in accordance with the preceding, an international carrier's quota shall be, for each eligible destination point, the ratio of the number of outbound routed messages to such destination point (as calculated pursuant to Section IV above) handled by such international carrier during the base period to the total number of routed messages destined to that point handled by all international carriers serving that point (whether picked up directly by the carrier or transferred to it by Western Union) during the same period. Upon the effective date of this formula, the initial quotas shall be calculated on a basis as the Federal Communications Commission shall by order prescribe. Thereafter, the quotas shall be recalculated at six-month intervals on the basis of traffic figures for the equivalent preceding six-month period, at which time any adjustments to the number of destination points served by international carriers which have occurred since the previous adjustment shall be communicated to the administrative body provided for in Section X below which shall communicate to Western Union the appropriate change to be made in its distribution of traffic. The above adjustment shall take place on dates to be determined by the interested parties.

VI. Distribution of Traffic in Accordance with Quotas

The quotas established by Section V hereof shall be applied by Western Union as follows:

(i) Specifically-routed traffic shall be transferred to the international carrier indicated by such routing; and

(ii) Unrouted message shall be distributed (without regard either to their length or classification of service) in the order of their arrival at the Western Union distribution office so tha. each international carrier will receive a volume of unrouted messages which will equal its quota. If the messages so distributed fail in any month to give the international carrier its quota, the distribution of messages shall be modified as soon as practicable after the ascertainment of such deficiency in such manner as to compensate for such deficiency and to assure to such carrier thereafter receives its quota. Inasmuch as the quota system set forth herein is designed to change automatically if traffic patterns change, the imbalance referred to above will be essentially self-correcting. However, in no event are deficiencies which may result in the short run to be considered legal obligations in which any carrier has a vested interest; and, accordingly, there shall be no accumulation of such deficiencies from year to year. Each international carrier entitled to share in such distribution shall furnish to the joint distribution office any information necessary to enable such distribution of unrouted messages to be effected in accordance with this formula. For purposes of the semi-annual adjustment to the quotas provided for in Section V above, all interested international carriers shall determine dates each year by which traffic data is to be supplied to the committee provided for in Section X below.

If any international carrier entitled to a quota reserves in any month a larger percentage of unrouted messages than its quota, Western Union shall transfer to the other international carriers interested therein a sufficient number of unrouted messages destined to the same point to balance the excess received by the particular international carrier. These overages shall not be considered legal obligations of the particular international carrier and shall not be accumulated from year to year.

VII. Distribution Offices

The Merged Company shall distribute traffic destined for transfer to an international carrier from a distribution office or offices selected by it and approved by the Commission.

Each international carrier entitled to share in the distribution of messages from distribution offices of the Merged Company shall have access to such distribution offices at any time to protect its interests in the method of making such distribution and transfer of messages to its operating rooms.

VIII. Transit Traffic .

It is understood that this formula does not cove any telegraph traffic originating outside the United States and transiting the United States, and that all such traffic handled by Western Union shall be turned over to the international carrier which would have handled the same if the consolidation or merger of Western Union and Postal Telegraph, Inc., had not occurred or as may be specifically routed.

IX. Equality of Treatment of International Carriers and Division of Charges

Except as provided in Section IV of this formula with respect to message traffic originating in certain gateway offices of Western Union, the services furnished by the Merged Company to the international carriers in connection with the handling of international traffic covered by this formula shall be uniform and non-discriminatory; and the division of charges for such outbound international traffic shall be such that Western Union shall retain or receive, for landline haul in connection with international traffic handled by it, or for pickup services, amounts which shall be prescribed from time to time by the Federal Communications Commission.

X. Administration

The supervision of the operations of this formula shall be by a committee of representatives of each of the interested international carriers, in which committee each carrier shall have equal representation, and the costs of which shall be equitably shared by the international carriers.

All costs involved in the maintenance by Western Union of distribution offices and in the distribution by it of traffic under this formula, including the cost of maintaining appropriate records as to the distribution, shall be equitably shared by the international carriers receiving traffic under this formula and reimbursed by them to Western Union; and all costs of distribution of traffic beyond the distribution offices of Western Union shall be borne by the international carriers. In the event there is disagreement among the members of the committee with respect to any feature of the distribution of traffic under this formula, the disagreement shall be submitted to the interested carriers, including Western Union. In the event the carriers are unable to agree among themselves, the matter shall be submitted to the Federal Communications Commission for a ruling.

XI. Effective Date of Formula

The provisions of this formula shall become effective and shall govern the distribution of traffic on February 1, 1976.

SCHEDULE A - DIVISION OF OUTBOUND CHARGES

The landline or pickup charges shown in the table below opposite each service classification under the caption "Divisions Per Word", and the number shown in the table below opposite each service classification under the caption "Minimum Number Chargeable Words Per Message," shall be respectively the charges per word (cable count), and the fewest number of words (cable count) per message which are to be charged by Western Union for handling outbound international message traffic in each classification handled by it regardless of the point of origin in the United States or the point of transfer to an international carrier in the United States, provided, however, that the merged company shall continue to pay to the Canadian carriers the same amounts per word which were being paid on July 1, 1958, with respect to that traffic exchanged with Canadian carriers destined to those points which are subject to the Telecommunications Agreement between the United States of American and British Commonwealth Governments (TIAS 2705, 1952).

Landline Haul Divisions

	Minimum Number of Chargeable Words Per Message	Division Per Word (cents)

*/ The "At discount" division shall apply if a discount of 50 percent applies to the through rates. As soon as the discount is eliminated with respect to any point, the charges applicable to "No discount" traffic shall automatically apply.

CONCURRING STATEMENT OF COMMISSIONER BENJAMIN HOOKS

In Re: Outbound International Message Distribution Formula (Docket 19660, Rm 690).

I wish to indicate that I am now undecided on the question of complete abolition of a formula in the near future.

The decision herein establishes that formula as a 1:1, routed-to-unrouted percentage which is undeniably and perfectly fair. It removes the artificial inequities of the old formula and provides a competitive incentive for carriers to seek a greater share of traffic specifically designated to it.

While I will be pleased to entertain proposals for the abolition of a formula and intend to keep an open mind, there are problems involved in absolute abolition (nomenclatural and others) and I cannot commit myself to an automatic reconfiguration at a specific future date.

INTERNATIONAL FORMULA AS AMENDED

Effective October 1, 1963

INTERNATIONAL FORMULA AS AMENDED*

This formula, pursuant to Section 222(e)(1) of the Communications Act of 1934 as amended, shall be effective upon the consolidation or merger of the Western Union Telegraph Company and Postal Telegraph, Inc., after the approval of such consolidation or merger, and of this formula, by the Federal Communications Commission pursuant to said Act. The term "Merged Company" is used herein to refer to the domestic telegraph operations of The Western Union Telegraph Company following such consolidation or merger. The term "Western Union International" includes its predecessor, the international telegraph operations of The Western Union Telegraph Co. heretofore called "Western Union Cables."

1. Traffic for which distribution is provided herein

The traffic for which distribution is provided herein is all telegraph traffic, both message and nonmessage or measured services, by wire or radio, specifically routed and unrouted, handled by the Merged Company originating in the continental United States and destined to points outside the continental United States, Canada, and Mexico; Provided, however, That quotas established in sections IV and VI hereof shall not apply to the nonmessage or measured services offered by the carriers, nor to the following:

(a) Such telegraph traffic handled by the Merged Company, originating and destined as aforesaid, as may be distributed to Canadian National Railway Company (or other companies comprised in the Canadian National Railway System) and Canadian Pacific Railway Company pursuant to a supplement to this formula which is annexed hereto as Appendix 1, if said supplement is approved by the Federal Communications Commission;

---

* "Formula, Pursuant to Section 222(e)(1) of the Communications Act of 1934, for the Distribution of Outbound International Traffic Handled by The Western Union Telegraph Company Following Merger with Postal Telegraph Co., Inc.," prescribed by the Commission. 10 F.C.C. 184 (1943), amended 25 F.C.C. 532 (1958), 30 F.C.C. 323 (1961) and 30 F.C.C. 951 (1961).

(b) Marine (shore to ship) traffic handled by the Merged Company, with respect to the distribution of which a separate formula is annexed hereto as Appendix 2; and

(c) Telegraph traffic handled by the Merged Company, originating in the continental United States and destined to Newfoundland, with respect to the distribution of which a separate formula is annexed hereto as Appendix 3.

The geographical areas of destination of the traffic covered by this formula are the following:

Area "A" - Atlantic

Sub-areas
(United Kingdom and Eire
(Continental Europe
(Beyond the Continent, including Greenland and Iceland
((but excluding Liberia)
(Liberia
(Saint Pierre-Miquelon

Area "B" - Latin America

Sub-areas
(Bermuda, Bahamas and the West Indies (other than Cuba)
(Cuba
(Central America
(South America

Area "C" - Pacific

Sub-areas
(Hawaii
(Midway and Guam
(Australasia
(Remainder of the Far East

II. Interested international carriers

The international carriers interested in the distribution of traffic destined to the respective geographical areas specified above will be the following (unless and until other international carriers enter business, or previously established international carriers whose business has been interrupted resume business, in the respective areas):

Area "A"	A. C. & R. Group
Atlantic	Press Wireless, Inc. (with respect to government and press messages)
	RCA Communications, Inc. (hereinafter called "RCAC")
	U.S.-Liberia Radio Corporation (hereinafter called "U.S.-Liberia")
	Western Union International
Area "B"	A. C. & R. Group
Latin America	Press Wireless, Inc. (with respect to government and press messages)
	RCAC
	Tropical Radio Telegraph Company (hereinafter called "Tropical")
	Western Union International
Area "C"	A. C. & R. Group
Pacific	Commercial Pacific Cable Company (hereinafter called "Commercial Pacific")
	Press Wireless, Inc. (with respect to government and press messages)
	RCAC

The term "A. C. & R. Group" refers collectively to the subsidiaries of American Cable and Radio Corporation; in the case of Area "A", the reference is to The Commercial Cable Company and Mackay Radio and Telegraph Company (Delaware); in the case of Area "B", the reference is to All America Cables and Radio, Inc., Mackay Radio and Telegraph Company (Delaware) and Mackay Radio and Telegraph Company (California); and in the case of Area "C", the reference is to both said Mackay Radio and Telegraph Companies. It is the intention hereof that quotas shall be established as provided in this formula for said A. C. & R. companies as groups as aforesaid, and that no quotas shall be established for said companies individually.

A. The right to receive a quota under this formula shall not purport in any manner whatsoever to limit or to restrict a carrier's scope of future operations; and although a carrier may not qualify for a quota, it shall always be entitled to receive its specifically routed traffic to all destination areas, if it accepts such traffic in pursuance of its published tariffs and transmits it to an overseas point.

III. Categories and Specific Routings

Each classification of traffic destined to each of the geographical sub-areas specified above shall for the purposes of this formula constitute a separate "category" or "category of traffic", and quotas for each such category shall be established as hereinafter provided.

Anything in this formula to the contrary notwithstanding, the Merged Company and each international carrier shall respect specific routings of any messages handled by it, and shall transfer to another carrier any messages specifically routed via such other carrier. All international messages delivered by the Merged Company shall carry in the preamble the agreed-upon via of the international carrier which transferred the message to the Merged Company. Messages shall be considered as specifically routed traffic if any of the following conditions are met:

(a) Messages which are filed at an office operated and maintained by an international carrier, whether filed in person, by messenger, by telephone, or received over a tieline or other directly connected facility terminating in such office, shall, unless specifically routed via a different carrier in a manner specified in clauses (i), (ii), (iii), or (iv) of (b) of this section, be considered as specifically routed via the carrier operating and maintaining such office;

Provided, however, That, except in the event Western Union International establishes branch offices of its own, all of the offices of the Merged Company located in the area 60th Street and south thereof in the Borough of Manhattan, New York; the office of the merged company located at the New York International Airport (Idlewild); the main office of the Merged Company in San Francisco, and one other office of the Merged Company located in the central business section of San Francisco in the general vicinity of the offices operated by A. C. & R. and RCAC, to be designated by Western Union International; and the main office of the Merged Company in Washington, D.C., shall be considered as offices of Western Union International within the purview of this section;

Provided, further, however, That, should A. C. & R. or RCAC open any additional office(s) in New York City other than in the area 60th Street and south in the Borough of Manhattan, in San Francisco, or in Washington, D.C., Western Union International may designate office(s) of the Merged Company in the general vicinity of such office(s) [opened by A. C. & R. or RCAC] to be considered as offices of Western Union International within the purview of this section, subject to the condition that the total number of offices of the Merged Company so designated by Western Union International in each such city shall not at any

time exceed the number of offices opened by either A. C. & R. or RCAC in New York City, other than in the area 60th Street and south in the Borough of Manhattan, in San Francisco, or in Washington, D.C.

Provided, further, however, That should A. C. & R. or RCAC move an office in New York City, other than within the area 60th Street and south in the Borough of Manhattan, San Francisco, or Washington, D.C., then Western Union International may designate an office of the Merged Company in the general vicinity of the relocated A. C. & R. or RCAC office as an office of Western Union International within the purview of this section so long as the total number of offices so designated in such city or area thereof is not increased;

Provided, further, however, That out of the traffic filed at these offices which has not had a specific routing designated by the sender a sufficient amount shall be transferred by the Merged Company to Tropical and United States-Liberia to satisfy their respective gateway city quotas to the extent that such quotas have not been satisfied by traffic specifically routed via their respective facilities and by unrouted traffic filed elsewhere in such gateway cities;

(b) Messages which are originated by the Merged Company at all of its offices within the continental United States (other than the aforesaid gateway offices specified in (a) above), shall be considered specifically routed only

(i) if, when filed in person, the specific routing is written in by the sender,

(ii) if, when filed by messenger, the message contains a specific routing which had been previously inserted by the sender (messages shall not be considered specifically routed merely by virtue of the use of a particular carrier's telegraph blank),

(iii) if, when filed by telephone, a specific routing is inserted by the receiving clerk at the unsolicited request of the sender, or

(iv) if, when filed over a tieline or other directly connected facility, the specific routing had been transmitted by the sender.

But nothing herein shall be construed as requiring any international carrier to accept, over tieline facilities furnished by it for its customers, which handle no domestic traffic, messages which are routed by the sender via another international carrier. Specifically routed messages are hereinafter sometimes referred to as "routed" traffic.

IV. Quotas

A. For outbound messages destined to sub-areas of Area "A", originating in New York, San Francisco and Washington, D.C. - for each of said cities, there shall be for each category separate quotas for Western Union International, the A. C. & R. Group and U.S -Liberia, but there shall be no quotas for RCAC or for Press Wireless, Inc., each of which shall be entitled to receive from the Merged Company traffic specifically routed via RCAC or Press Wireless, Inc., as the case may be, but only such traffic. The quotas for Western Union International, the A. C & R. Group and the U.S. - Liberia shall be as follows: the quota for each for a particular category originating in the particular city shall be the ratio of the number of outbound messages in such category originating in such city handled by it (whether picked up directly by such international carrier or transferred to it by domestic landline carriers) during the year 1942 to the total number of outbound messages in such category originating in such city handled during the year 1942 by Western Union International, the A. C. & R. Group and U.S. and Liberia.

B. For outbound messages destined to sub-areas of Area "B", originating in New York, San Francisco and Washington, D.C. - for each of said cities, there shall be for each category separate quotas for Western Union International, the A. C. & R. Group and Tropical, but there shall be no quotas for RCAC or for Press Wireless, Inc., each of which shall be entitled to receive from the Merged Company traffic specifically routed via RCAC or Press Wireless, Inc., as the case may be, but only such traffic. The quotas for Western Union International, the A. C. & R. Group and Tropical shall be as follows: the quota for each for a particular category originating in the particular city shall be the ratio of the number of outbound messages in such category originating in such city handled by it (whether picked up directly by such international carrier or transferred to it by domestic landline carriers) during the year 1942 to the total number of outbound messages in such category originating in such city handled during the year 1942 by Western Union International, the A. C. & R. Group and Tropical.

C. For outbound messages destined to sub-areas of Area "C", originating in New York, San Francisco and Washington, D.C. - for each of said cities, there shall be for each category separate quotas for Commercial Pacific, the A. C. & R. Group and RCAC, but there shall be no quota for Press Wireless, Inc., which shall be entitled to receive from the Merged Company traffic specifically routed via Press Wireless, Inc., but only such traffic. The quotas for Commercial Pacific, the A. C. & R. Group and RCAC shall be as follows: the quota for each for a particular category originating in the particular city shall be the ratio of the number of outbound messages in such category originating in such city handled by it (whether picked up directly by such international carrier or transferred to it by domestic

andline companies) during the year 1942 to the total number of outbound essages in such category originating in such city handled during the ear 1942 by Commercial Pacific, the A. C. & R. Group and RCAC.

D. For outbound messages destined to sub-areas of Areas "A", "B", "C", originating in the United States outside New York, San Francisco nd Washington, D.C. - there shall be for each category separate quotas or all the international carriers interested in the particular category xcept Press Wireless, Inc., which shall be entitled to receive from the erged Company traffic specifically routed via Press Wireless, Inc., but nly such traffic. The quotas for the interested international carriers ntitled to quotas in a particular category shall be as follows: the quota or each for such category originating in such territory shall be the ratio f the number of outbound messages in such category originating in such erritory handled by it (whether picked up directly by such international arrier or transferred to it by domestic landline companies) during the ear 1942 to the total number of outbound messages in such category riginating in such territory handled during the year 1942 by all inter- ational carriers interested in such category, subject to adjustment, owever, with respect to the quotas of Western Union International and CAC to give full effect to the contract between them dated September 2, 1931.

'. Distribution of traffic in accordance with quotas

The quotas established pursuant to sections IV and VI hereof with espect to each category shall be applied by the Merged Company as ollows: all the outbound traffic (routed and unrouted) in such cate- ory handled by the Merged Company, except

(a) the traffic in such category distributed to an international carrier not entitled to a quota in such category but entitled to receive traffic in such category specifically routed via it, and

(b) any traffic in such category distributed as mentioned in paragraph (a) of I, above, to the Canadian companies referred to in said paragraph (if Appendix 1 hereto is approved by the Federal Communications Commission),

shall be distributed among the international carriers entitled to quotas in such category, in such proportions that each such international carrier shall receive, of the gross international tolls from the United States gateways to the foreign destinations on all messages in such category handled during the current period by such international carriers (including specifically routed messages and messages handled by the respective inter-

national carriers otherwise than through the Merged Company), a percentage equal to its quota for such category. The term "gross international tolls" is used in this formula (and in Schedule B hereto) to refer only to (i) the tolls payable to or collectible by an international carrier for the transmission of international traffic from point of exit from the United States to point of destination outside the United States just as if the actual origin of such traffic in the United States had been such point of exit but after deduction, in the case of any such traffic actually picked up at such point of exit, of the Merged Company's charge or of an equal amount if picked up otherwise than by the Merged Company, and (ii), in the case of outbound international traffic not covered by clause (i) above but transmitted by leased cable circuit, the rental income therefrom.

The distribution of traffic by the Merged Company among the international carriers entitled to quotas shall be made as follows:

(i) Specifically routed messages shall be transferred to the international carrier indicated by such routing; and

(ii) Unrouted messages in each category shall be distributed in the order of their arrival at the distribution office so that each international carrier entitled to a quota in such category will receive a volume of such unrouted messages which, together with other messages in such category handled by such carrier (including specifically routed messages and messages handled otherwise than through the Merged Company), will give it a percentage, equal to its quota in such category, of the gross international tolls on all messages in such category If the messages so distributed fail in any month to give to any international carrier its quota of gross international tolls from such category, the distribution of messages shall be modified as soon as is practicable after the ascertainment of such deficiency in such manner as to compensate for such deficiency and to assure to such carrier thereafter its quota of gross international tolls from such category of traffic. Each international carrier entitled to share in such distribution shall furnish to the joint distribution offices any information necessary to enable such distribution of unrouted messages to be effected in accordance with this formula.

In distributing unrouted traffic, the Merged Company shall preserve for each carrier and for each category, so far as practicable, the relative distribution by destinations (countries and cities) within the described sub-areas which prevailed during the base periods, and shall also make reasonable distribution by length of message. The Merged Company shall preserve for Tropical for each category, so far as practicable, its relative proportion of the traffic in such category originating in

New Orleans and destined to countries in Latin America described in Schedule A hereto which Tropical handled during the base period of 1942.

In each category of traffic destined to any sub-area of Areas "A", "B" or "C", if any international carrier entitled to a quota in such category would receive, from messages specifically routed via it and messages handled by it otherwise than through the Merged Company, a larger percentage than its quota, then the Merged Company shall, out of such carrier's quotas in other classes of traffic destined to the same sub-area transfer to the other international carriers interested therein sufficient messages to balance the excess received by the particular international carrier in the particular category.

The provisions of this section V are, with respect to Western Union International and RCAC, subject to the special agreement set forth in Schedule B hereto providing for the transfer to RCAC, out of quotas of Western Union International, of certain additional messages; and the Merged Company shall transfer such messages to RCAC in accordance with said special agreement.

Distribution offices

The Merged Company shall distribute traffic destined for transfer from a single distribution office in each city where traffic is to be transferred to an international carrier.

Each international carrier entitled to share in the distribution of messages from distribution offices of the Merged Company shall have access to such distribution offices at any time to protect its interests in the method of making such distribution and transfer of messages to its operating rooms.

Each such distribution office shall, for the duration of the present war emergency, be located at an office of the Merged Company where it will provide equal service to the international carriers involved, to the extent practicable without dislocation of existing facilities.

VI. Reestablishment of telegraph communication.

In the event that any international carrier shall reestablish telegraph communication (directly or indirectly) to any country in Areas "A" or "C" with which communication by such carrier has been interrupted, then:

A. For outbound messages destined to any such country in Area "A", originating in New York, San Francisco and Washington, D.C. - for said

cities, collectively, there shall be for each category separate quotas for Western Union International and the A. C. & R. Group, but there shall be no quotas for RCAC or for Press Wireless, Inc., each of which shall be entitled to receive from the Merged Company traffic specifically routed via RCAC or Press Wireless, Inc., as the case may be, but only such traffic. The quotas for Western Union International and the A. C. & R. Group shall be as follows: the quota for each for a particular category destined to the country with which communications is reestablished shall be the ratio of the number of outbound messages in such category, originating in New York and destined to such country, handled by it (whether picked up directly by such international carrier or transferred to it by domestic landline carriers) during the last twelve months during which all international carriers concerned were normally handling traffic to such country, to the total number of outbound messages in such category, originating in New York and destined to such country, handled during said twelve months by Western Union International and the A. C. & R. Group.

B. For outbound messages destined to any such country in Area "A", originating outside New York, San Francisco and Washington, D.C. - for said territory there shall be for each category separate quotas for Western Union International, the A. C. & R. Group and RCAC, but there shall be no quota for Press Wireless, Inc., which shall be entitled to receive from the Merged Company traffic specifically routed via Press Wireless, Inc., but only such traffic. The quotas for Western Union International, the A. C. & R. Group and RCAC shall be as follows: the quota for each for a particular category destined to the country with which communication is reestablished shall be the ratio of the number of outbound messages in such category destined to such country (wherever originating in the United States) handled by it (whether picked up directly by such international carrier or transferred to it by domestic landline carriers) during the last twelve months during which all international carriers concerned were normally handling traffic to such country, to the total number of outbound messages in such category destined to such country (wherever originating in the United States) handled during said twelve months by Western Union International, the A. C. & R. Group and RCAC.

C. For outbound messages destined to any such country in Area "C", originating in New York, San Francisco and Washington, D. C. and originating outside said cities - for each of said cities and for the territory outside said cities, there shall be for each category separate quotas for Commercial Pacific, the A. C. & R. Group and RCAC, but there shall be no quota for Press Wireless, Inc., which shall be entitled to receive from the Merged Company traffic specifically routed via Press Wireless, Inc., but only such traffic. The quotas for Commercial Pacific, the A. C. & R. Group and RCAC shall be as follows: the quota for each for a particular category destined to the country with which communication is reestablished

shall be the ratio of the number of outbound messages in such category destined to such country handled by it (whether picked up directly by such international carrier or transferred to it by domestic landline carriers) during the last twelve months during which all international carriers concerned were normally handling traffic to such country, to the total number of outbound messages in such category destined to such country handled during said twelve months by Commercial Pacific, the A. C. & R. Group and RCAC.

VII. Signs and advertising

In New York, San Francisco and Washington, D C., the Merged Company shall be free to carry in any of its offices signs or other matter advertising Western Union International, provided that it affords privileges to the A. C. & R. Group and Commercial Pacific to display at said offices, signs or other matter advertising said Group and Commercial Pacific; and said Group and Commercial Pacific shall afford similar privileges, at their offices in said cities, to Western Union International to display signs or other matter advertising Western Union International. The Merged Company's other offices (exclusive of railway offices operated by the railways, where Western Union International's signs are now being displayed) shall not carry signs or advertising matter of any kind for any of the international carriers (including Western Union International) unless it affords similar privileges to all the international carriers. Signs or other matter advertising a particular international carrier which are to be displayed as aforesaid at an office of another carrier shall be subject to the approval of such other carrier as to form; and the preparation and installation of any such signs and other advertisng matter shall be for the account and at the expense of the carrier which they advertise.

VIII. Postal facilities now used for international traffic

Wherever there are at present both Postal and Western Union tie-lines or tubes, or only Postal tie-lines or tubes, to a customer's office, the A. C. & R. Group and Commercial Pacific shall have the right to purchase from the Merged Company the Postal equipment and to lease the necessary facilities to connect the customer with the A. C. & R. Group or the Commercial Pacific operating rooms; or, if in any such case because of the customer's wishes or a shortage of equipment it seems preferable to have only one printer in the customer's office, a two-way switch shall be installed so that the customer may be connected at his option either to the Western Union International or the A. C. & R. Group or the Commercial Pacific operating rooms.

The A. C. & R. Group shall have the right to purchase from the Merged Company the Postal equipment and to lease the direct customers' circuits of Postal between Washington, D.C., and the A. C. & R. Group operating rooms in New York used for international traffic.

The A. C. & R. Group shall have the right to purchase the equipment and lease the space and facilities now supplied by Postal to the A. C. & R. Group at various produce exchanges and press offices in New York City.

Facilities leased as aforesaid from the Merged Company shall be leased at the applicable tariff rates. The purchase price of equipment purchased as aforesaid, and rentals for space leased as aforesaid, shall be at prices and rentals to be mutually agreed upon.

The Merged Company shall continue to operate the Miami end of the Miami-Havana cable of the A. C. & R. Group on the same basis and terms that Postal now operates it.

IX. Transit traffic

It is understood that this formula does not cover any telegraph traffic originating outside the United States and transiting the United States, and that all such traffic handled by the Merged Company shall be turned over to the international carrier which would have handled the same if the consolidation or merger of Western Union and Postal Telegraph, Inc., had not occurred or as it may be specifically routed.

X. Equality of treatment of international carriers and division of charges

Except as provided in section III of this formula with respect to message traffic originating in certain gateway offices of the Merged Company the services furnished by the merged company to the international carriers in connection with the handling of international traffic (both message and nonmessage or measured services and particularly interconnection such as the domestic Telex service of the merged company), covered by this formula shall be uniform and nondiscriminatory; and the division of charges for such outbound international traffic shall be such that the Merged Company shall retain or receive, for landline haul in connection with international traffic handled by it, or for pickup services, amounts which shall be as prescribed from time to time, by the Federal Communications Commission.

XI. Administration

The supervision of the operations of this formula shall be under a committee of representatives of each of the interested international

carriers (the A. C. & R. Group not being considered a group for the purposes of this section), the staff of which committee may function at the distribution offices of the Merged Company, and the costs of which committee (including the cost of leasing space for said staff at such distribution offices) shall be equitably shared by said international carriers All costs involved in the maintenance by the Merged Company of distribution offices and in the distribution by it of traffic under this formula, including the cost of maintaining appropriate records as to the distribution, (but excluding the cost of any direct tie line or telephone facility maintained by Western Union International at any such distribution offices) shall be equitably shared by the international carriers and reimbursed by them to the Merged Company; and all costs of distribution of traffic beyond the distribution offices of the Merged Company shall be borne by the international carriers. In the event there is disagreement among the members of the committee with respect to any feature of the distribution of traffic under this formula, the disagreement shall be submitted to the interested carriers, including the Merged Company. In the event the carriers are unable to agree among themselves, the matter shall be submitted to the Federal Communications Commission for a ruling.

SCHEDULE A

Countries served by Tropical Radio and Telegraph Company through New Orleans as a gateway:

British Honduras
Guatemala
Honduras
El Salvador
Nicaragua
Costa Rica
Panama
Puerto Rico
Cuba

SCHEDULE B

Special Agreement between Western Union International and RCAC

Out of certain of Western Union International's quotas established pursuant to the foregoing formula, the Merged Company shall transfer to RCAC certain messages in accordance with this special agreement.

This special agreement constitutes an arbitrary compromise agreed upon by Western Union International and RCAC. In arriving at this compromise, Western Union International computed the United States domestic landline tolls paid by RCAC to Western Union during the base year of 1942 on incoming international traffic from Areas "A" and "B", as compared with the international tolls which would have been retained by Western Union International on outgoing international traffic to said Areas which was actually transferred by Western Union to RCAC during said year; and Western Union then estimated the number of additional outbound messages that would have been required to be transferred to RCAC during said year to bring the figures into approximate balance. RCAC, on the other hand, estimated the number of additional messages which would have been required to give weight to the combination of inbound and outbound traffic handled by RCAC and Western Union International. Approximately the same figures for additional messages were arrived at by the two methods, and the figure of 111,200 was agreed upon.

With a view to the preservation of existing cable routes and the greater use of direct circuits where available, it is agreed by Western Union International and RCAC that, while the aforesaid figure of 111,200 messages was arrived at as aforesaid, the transfers of messages from Western Union International to RCAC pursuant to this special agreement shall be limited to messages destined to Continental Europe and Beyond the Continent including Greenland and Iceland (but excluding Liberia), sub-areas of Area "A". It is further agreed that the messages transferred shall be in classes other than press, government and fixed text.

Said figure of 111,200 is 60.5% of the total number of outbound messages (other than press, government and fixed text) originating in the United States and destined to said sub-areas of Area "A", handled by Western Union International during the year 1942.

During the operation of this formula, the Merged Company shall, out of Western Union International's quotas of messages (wherever originating) destined to said sub-areas of Area "A" (exclusive of any quotas of messages established pursuant to section VI of the foregoing formula, to which quotas this special agreement shall have no application whatsoever), transfer to RCAC messages (other than press, government and fixed text)

to the extent necessary to cause RCAC to receive 60.5% of the gross international tolls on the messages (other than press, government and fixed text) in Western Union International's said quotas.

It is understood, however, that:

(a) The messages so to be transferred to RCAC shall not, if otherwise available, include messages destined to Russia or Egypt. It is understood, depending upon the availability of traffic for the purpose, that approximately 30% of the messages so transferred to RCAC shall be distributed to countries in Continental Europe and approximately 70% to countries Beyond the Continent including Greenland and Iceland (but excluding Liberia); but variations in the initial proposed distributions may subsequently be made from time to time to meet changing conditions. (Russia and Egypt are countries in said sub-areas of Area "A" where both RCAC and Mackay Radio and Telegraph Company (Delaware) presently have competitive radio circuits, and it is understood that the exclusion of these countries shall not be construed as an assumption that there will or will not be additional competitive radio circuits or that the existing competitive radio circuits will or will not be continued in operation.)

(b) All messages so to be transferred to RCAC shall be messages originating outside the cities of New York, San Francisco and Washington, D.C., unless there shall not be available in Western Union International's quotas a sufficient number of such messages for the purpose, in which event sufficient messages originating in said cities to make up the deficit shall be transferred out of Western Union International's quotas.

SCHEDULE C

Division of Outbound Charges

The landline or pickup charges shown in the table below opposite each service classification under the caption "Divisions per Word," and the number shown in the table below opposite each service classification under the caption "Minimum Number Chargeable Words per Message," shall be respectively, the charges per word (cable count), and the fewest number of words (cable count) per message which are to be charged by the merged company for handling outbound international message traffic in each classification handled by it regardless of the point of origin in the United States or the point of transfer to an international carrier in the United States or to a Canadian carrier: Provided, however, That the merged company shall continue to pay to the Canadian carriers the same amounts per word which were being paid on July 1, 1958, with respect to that traffic exchanged with Canadian carriers pursuant to appendix I hereof which is destined to those points which are subject to the Telecommunications Agreement Between The United States of America and British Commonwealth Governments (TIAS 2705, 1952): And Provided further, That after the effective date of this amendment (August 1, 1958), the Merged Company shall not in any month transfer to any such Canadian carriers a larger percentage of any traffic to any subarea of destination than the percentage of such traffic turned over to any such Canadian carriers during 1957. If in any month it does in fact make such excessive transfer with respect to such traffic, the merged company shall in the next succeeding months refrain from making any transfers to either of the Canadian carriers until it has transferred sufficient traffic to other carriers to restore the balance herein required with respect to such traffic.

Service Classification	Minimum number chargeable words per message	Divisions per word (Cents)
Full rate	5	5.5
Letter telegram	22	2.75
U.S. Government full rate (no discount)	5	5.5
U.S. Government rate (at discount)*	5	2.75
U.S. Government letter telegram	22	2.75
Other Government full rate (no discount)	5	5.5
Other Government full rate (at discount)*	5	2.75
Other Government letter telegram	22	2.75

Service Classification	Minimum number chargeable words per message	Divisions per word (Cents)
United Nations full rate (no discount)	5	5.5
United Nations full rate (at discount)*	5	2.75
United Nations letter telegram	22	2.75
Meteorological	5	2.75
Urgent press	10	5.5
Ordinary press	10	1.7
Deferred press	10	1.7
Victory letter telegram	10	2.75
Expeditionary Force messages	-	.25**

* The "At discount" division shall apply if a discount of 50 percent applies to the through rates. As soon as the discount is eliminated, with respect to any point, the charges applicable to "No discount" traffic shall automatically apply.

** Per message.

APPENDIX I

Supplement to Foregoing Formula, Providing for the Distribution by the Merged Company of Traffic to Canadian Carriers

This supplement shall be effective simultaneously with the effectiveness of the foregoing formula.

I. Canadian National Railway Company (and other companies comprised in the Canadian National Railway System), all said companies being hereinafter collectively referred to as "Canadian National"

There shall be no quota for Canadian National for any category of traffic. Canadian National shall, however, be entitled to receive from the Merged Company its proportion of routed traffic (i.e. messages on which the sender indicates the route to be used is a cable route involving transit through Canada) originating in the United States and destined to Areas "A", "B" or "C", as may be determined by agreement between Canadian National, the Merged Company and Canadian Pacific, based on past performance in respect of each such Area during a representative test period or periods, but only such traffic.

II. Canadian Pacific Railway Company, herein referred to as "Canadian Pacific"

Canadian Pacific shall be entitled to receive from the Merged Company its proportion of the aforementioned routed traffic originating in the United States and destined to Areas "A", "B" or "C" as may be determined by agreement as provided in the preceding paragraph, based on past performance in each such Area during a representative test period or periods.

There shall be no quota for Canadian Pacific for any category of traffic destined to Area "A".

For outbound messages destined to sub-areas of Areas "B" or "C", wherever originating in the United States, the Canadian Pacific shall have a separate quota for each category. The quota for a particular category shall be the ratio of the number of outbound messages in such category transferred by the Postal Telegraph Landline System to it during the year 1942 to the total number of outbound messages in such category transferred by Western Union and by the Postal Telegraph Landline System during the year 1942 to all international carriers, including Western Union International.

The quota so established with respect to each category shall be applied by the Merged Company as follows: Canadian Pacific shall receive from the Merged Company a volume of unrouted messages in such category which, together with any routed messages in such category received by it from the Merged Company as hereinabove provided, will give it a percentage, equal to its quota in such category, of the total outgoing international messages in such category handled by the Merged Company.

The charges for international traffic covered by this supplement shall be divided (a) between the Merged Company and Canadian National pursuant to the provisions of the agreement of January 1, 1915, now in effect between The Western Union Telegraph Company and Canadian Northern Telegraph Company, etc., and (b) between the Merged Company and Canadian Pacific pursuant to the provisions of the agreement of October 1, 1933, as amended by the agreement of August 1, 1936, now in effect between Postal Telegraph-Cable Company and Canadian Pacific.

If and when this supplement becomes effective as stated above, the provisions hereof, to the extent that the same may conflict with the provisions of any presently existing contracts which Canadian National or Canadian Pacific have with Western Union or with any of the companies comprising the Postal Telegraph Landline System or with any American international carrier, shall control.

Note:

RCAC does not approve the principle involved in section II of this Appendix insofar as it relates to unrouted traffic.

The A. C. & R. Group takes no exception to this Appendix, but if the Federal Communications Commission should disapprove section II insofar as it relates to unrouted traffic the A. C. & R. Group takes the position that the unrouted traffic transferred by the Postal Telegraph Landline System to Canadian Pacific during the year 1942 should be considered as though handled by the A. C. & R. Group, for the purpose of computing the quotas of said Group pursuant to sections IV and VI of the foregoing formula.

APPENDIX 2

Formula for the Distribution by the Merged Company of Marine (Shore to Ship) Traffic

1. The mobile service carriers, Radiomarine Corporation of America (hereinafter called the "RMCA"), Tropical Radio Telegraph Company (hereinafter called "Tropical") and the Mackay Radio and Telegraph Companies (of Delaware and California, respectively, hereinafter referred to collectively as "Mackay"), shall have for each class of service basic quotas for the division of all outbound mobile service traffic originating with or handled by the Merged Company. The basic quota for each class of service shall be the ratio of the total number of inbound and outbound messages in all classes handled by it during the year 1938 to the total number of inbound and outbound messages in all classes handled during the year 1938 by all said carriers (excluding meteorological traffic in both cases).

2. The basic quota of each mobile service carrier for any class of service, established as set forth in clause 1, shall be modified after six months' operation under said basic quota and ~~every~~ six months thereafter as follows: if such carrier's percentage of inbound messages in such class turned over to the Merged Company shall be increased over or decreased under its percentage of total inbound messages in such class (including those delivered directly) during the 1938 base period, one-half of such increase or decrease shall be added to or subtracted from such carrier's quota for such class of service to determine the division of outbound traffic by the Merged Company during the succeeding six months' period (and thereafter until further adjustment pursuant to this clause 2). This clause 2 shall not take effect until all three of said mobile service carriers shall have re-established their commercial marine communications business.

3. Mobile service messages delivered to the mobile service carriers directly by the public, and such messages delivered by the public to R. C. A. Communications, Inc. for RMCA, and such messages delivered by the public to All America Cables and Radio, Inc., The Commercial Cable Company or Commercial Pacific Cable Company for Mackay, shall be distributed to the particular mobile service carrier and shall not be included in the mobile service traffic originating with or handled by the Merged Company which is to be divided by the Merged Company among the mobile service carriers in accordance with their quotas hereunder.

4. In making division of mobile service traffic among the mobile service carriers in accordance with their quotas, the Merged Company shall transfer specifically routed messages to the carrier indicated by such routing, and shall divide unrouted messages in each class of service so

that each carrier will receive a volume of such unrouted messages in such class which, together with specifically routed messages received by it in such class from the Merged Company (excluding those mentioned in clause 3 above), will give it its quota in such class.

5. Any mobile service carrier, other than RMCA, Mackay and Tropical, which operated coastal stations during 1938 and which is not now rendering service and which shall notify the Merged Company of its re-entry into the field, shall upon its re-entry into the field obtain a basic quota for each class of service, and the quotas of the other mobile service carriers at the time rendering service shall be modified, as follows: such carrier re-entering into the field shall obtain a basic quota for each class of service which shall be the ratio of the number of inbound and outbound messages in such class handled by it during the year 1938 to the total number of inbound and outbound messages in such class handled during the year 1938 by such carrier and by RMCA, Mackay and Tropical. After clause 2 shall have become operative, the quotas due a carrier subsequently re-entering the field shall be readjusted in accordance with the provisions thereof. Upon the re-entrance of said former carrier, the quotas of the then active carriers shall be appropriately adjusted to take account of the quota obtained by the carrier re-entering the field.

6. The mobile service carriers shall currently furnish to the Merged Company any information necessary to enable division of outbound mobile service traffic to be effected in accordance with this formula. All costs involved in the maintenance by the Merged Company of appropriate records as to the distribution by it of mobile service traffic under this formula shall be equitably shared by the mobile service carriers and reimbursed by them to the Merged Company.

7. The services furnished by the Merged Company to the mobile service carriers in connection with the handling of mobile service traffic covered by this formula shall be uniform and non-discriminatory; and the division of charges for such mobile service traffic shall be such that the Merged Company shall retain or receive, for landline haul in connection with the traffic handled by it, or for pick-up services, amounts which, regardless of the provisions of any existing agreement between any mobile service carrier and Western Union or companies comprising the Postal Telegraph Landline System, shall be in accordance with the tariffs of Western Union for such traffic from time to time on file with the Federal Communications Commission. No Western Union tariffs for such traffic presently on file with the Commission show such division of charges, and it is understood that, in view of the fact that mobile service communication has been interrupted and such service is not now being rendered, Western Union tariffs for such traffic showing such division of charges are not now being filed.

It is further understood, however, that when such tariffs are filed, t
division of charges provided for will be such that the Merged Company'
landline or pick-up charge will vary from 3¢ to 11¢ (assuming that la
line rates then in effect are substantially the same as at present) p
word (for Full Rate and Cde, with usual percentage reductions for ot!
classes of service), depending upon the point of origin of the messag
relation to the point of transfer to the mobile service carrier, and
for each point of transfer to mobile service carriers either (a) zone
be established such as are set forth in certain of the subdivisions o
Schedule C of the formula to which this is an appendix and the charge
vary from zone to zone from the aforesaid minimum to the aforesaid ma
mum, or (b) a different method of grouping states will be establishe
the charge again varying from said minimum to said maximum, all as ma
be agreed upon by the interested mobile service carriers with the Mer
Company and approved by the Commission, or as may be prescribed by th
Commission.

8. In the event that the Merged Company shall have any question with respect to any feature of the distribution of traffic under this formula, such question shall be submitted to the interested carriers and in the event they are unable to agree among themselves and advise the Merged Company, the Merged Company shall be entitled to submit the question to the Federal Communications Commission for a ruling and shall be entitled to rely upon the ruling of said Commission.

9. If and when this formula becomes effective, the provisions hereof, to the extent that the same may conflict with the provisions of any presently existing contracts which any of the mobile service carriers have with Western Union or with any of the companies comprising the Postal Telegraph Landline System, shall control.

APPENDIX 3

Supplement to Foregoing Formula, Providing for the Distribu[illegible]
by the Merged Company of Traffic to Newfoundland

This [illegible] shall be effective [illegible] the effec-
ness of the foregoing formula.

For the purposes of this supplement: the term "Commercial" refer[illegible]
to The Commercial Cable Company; and each classification of traffic de[illegible]ined
to Newfoundland shall constitute a separate "category" or "category of[illegible]
traffic", and quotas for each such category shall be established as he[illegible] in-
after provided.

For outbound messages destined to Newfoundland, wherever originat[illegible]g
in the United States, Western Union International and Commercial shall[illegible]
each have a separate quota for each category. The quota for each for[illegible]
particular category shall be the ratio of the number of outbound mess[illegible]s
in such category handled by it (whether picked up directly by such in[illegible]
national carrier or transferred to it by domestic landline carriers)
during the first six months of 1943 to the total number of outbound m[illegible]ges
in such category handled during the first six months of 1943 by Weste[illegible]
Union International and Commercial.

The quotas so established with respect to each category shall be
applied by the Merged Company to all the outbound traffic (routed and
unrouted) in such category handled by it, and the distribution of such
traffic by the Merged Company between Western Union International and [illegible]n-
mercial shall be made, all in like manner as is specified in section V [illegible]f
the foregoing formula with respect to the distribution in accordance w[illegible]h
said formula of traffic destined to any sub-area of Areas "A" or "B"; [illegible]l
the provisions of said section V with respect to distribution offices
the Merged Company and of section IX with respect to transit traffic, [illegible]ll
all be applicable to this supplement with like effect as though set fo[illegible]h
herein.

The services rendered by the Merged Company to the international
carriers in connection with the handling of traffic to Newfoundland co[illegible]ed
by this formula shall be uniform and non-discriminatory; and the divis[illegible]h
of charges for such traffic shall be such that the Merged Company shal[illegible]re-
tain or receive, for landline haul in connection with such traffic han[illegible]ed
by it, or for pick-up or delivery services, from or to point of origin
in the United States to or from point of transfer in New York City, an[illegible]nts
which shall be in accordance with the tariffs of Western Union on file[illegible]or
domestic landline services, regardless of the provisions of any existi[illegible]
agreement between Commercial and any of the companies comprising the [illegible]ral
Telegraph Landline System.

F.C.C. 73-1203

BEFORE THE

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON, D.C. 20554

In the Matter of INTERNATIONAL RECORD CARRIERS' SCOPE OF OPERATIONS IN THE CONTINENTAL UNITED STATES, INCLUDING POSSIBLE REVISIONS TO THE FORMULA PRESCRIBED UNDER SECTION 222 OF THE COMMUNICATIONS ACT	Docket No. 19660 RM-690

MEMORANDUM OPINION AND ORDER

(Adopted November 21, 1973; Released November 26, 1973)

BY THE COMMISSION: COMMISSIONER H. REX LEE ABSENT; COMMISSIONER REID CONCURRING IN THE RESULT.

1. The Commission has before it for consideration (a) a petition for rulemaking filed by ITT World Communications Inc. (ITT) under Section 222(e)(3) of the Communications Act seeking changes to the formula for distribution of outbound international messages (formula);[1] (b) comments on that petition filed by RCA Global Communications, Inc. (RCA), Western Union International, Inc. (WUI), TRT Telecommunications Corp. (TRT), French Telegraph Cable Co. (French Cable), Canadian National Railway Co. (CNR), Canadian Pacific, Ltd. (CPL) and The Western Union Telegraph Co. (WU); (c) a reply filed by ITT; and (d) supplementary comments filed in response to a request of the Chief, Common Carrier Bureau, by RCA, WUI, French Cable, TRT, CPL and WU amplifying the positions taken in their originally filed comments. The ITT petition alleges that the formula, as presently written, is anachronistic and no longer provides a distribution among the international record carriers (IRC's) of outbound international message traffic which is just, reasonable, or equitable in the public interest. The petition further requests the Commission thoroughly to review the workings of the formula and to prescribe a new formula which will be eqiutable to all parties.

2. The present dispute centers around the formula developed pursuant to Section 222(e)(1) of the Communications Act. That section provides that

> the consolidated or merged carrier [WU] shall . . . distribute among the international telegraph carriers, telegraph traffic by wire or radio destined to points without the continental United States. . . . in accordance with such just, reasonable, and equi-

[1] As originally filed, the petition was denominated a "complaint" in accordance with the language of Section 222(e)(3). However, since it involved a request for a change in the formula, which is a "rule" within the meaning of § 551(4) of the Administrative Procedure Act, 5 U.S.C. § 551 (1971), it was treated as a petition for rulemaking and assigned the file number RM-690. For simplicity, the complaint will be referred to herein as a petition for rulemaking or petition.

...denominated a "complaint" in accordance with ...ver, since it involved a request for a change in ...eaning of § 551(4) of the Administrative Proce... ...eated as a petition for rulemaking and assigned ... the complaint will be referred to herein as a

table formula in the public interest as the interested carriers shall agree upon and the Commission shall approve . . . 47 U.S.C. § 222(e)(1) (1970).

The question before us is whether the formula currently in effect, which was initially prescribed by the Commission in 1943, is now outmoded. Section 222(e)(3) provides that the formula may be revised whenever, upon a complaint or upon its own motion and after a full hearing, the Commission determines that the formula no longer operates so as to fulfill the statutory requirements. We believe that the ITT petition and associated pleadings make a *prima facie* showing that the current formula is or will be unjust, unreasonable, or inequitable and thus not in the public interest.

3. Section 222 was enacted in 1943 to permit the merger of WU and The Postal Telegraph Cable Co. (Postal). As a result of the merger, WU would become the sole domestic telegraph carrier with an extensive landline network.[2] Congress feared that this would put WU in a position where it could favor its own international division (WU Cables) over the independent IRC's with respect to traffic originating in the hinterland. Therefore, the section included a provision requiring WU to divest itself of its cable division. Since divestment was not made a pre-condition of the merger, WU would continue its international operations until such time as a purchaser for them was found. Section 222(e) was included to provide a method for insuring fair distribution among the IRC's of outbound international message traffic by WU, avoiding favoritism of either its own cable division pending divestment or another carrier. We approved the merger application on September 27, 1943, 10 F.C.C. 148 (Docket 6517), and issued an accompanying "Separate Report of the Commission on Formulas for the Distribution of International Traffic," 10 F.C.C. 184. In this document, we adopted a method of distribution which, with some modifications,[3] remains in effect today.

4. The formula, which is set forth in the attached Appendix, provides generally that each IRC should receive from WU a sufficient number of unrouted[4] international messages so that the gross international tolls such IRC would receive from all traffic (routed as well as unrouted) destined to a particular geographical sub-area[5] would accord with that carrier's proportionate share of the total tolls to each subarea during the base year.[6] An IRC is given a quota of messages, taking into consideration not only the number but also the length of

[2] There was a limited IRC domestic message service prior to World War II. However, during the war, the War Communications Board ordered those operations terminated for reasons of national security, and they were never resumed.

[3] In 1961, in connection with the WU divestment, we modified the formula to substitute WUI for WU Cables division and to reflect the fact that thereafter WUI would be an independent IRC.

[4] A customer sending an outbound international telegram via WU may either specify the international carrier he wishes to handle the message (a "routed" telegram) or merely file the message with WU without further direction (an "unrouted" message). The formula, which provides in Section III that specific routings are to be honored, was designed to provide a fair distribution of total message traffic.

[5] The formula created three Areas: (1) Area "A" (Atlantic), (2) Area "B" (Latin America) and (3) Area "C" (Pacific). Each area is divided into "Subareas" to cover specific countries and territories.

[6] The "base year" under the formula is, generally, 1942 (the last full year prior to the merger). The formula, however, provided that where service to a country within a subarea of Areas A or C had been interrupted by the war, the base period for determination of quotas would be the last twelve-month period prior to the interruption in which all interested IRC's were normally handling traffic to that country.

the messages, to the geographical areas it was authorized to serve in 1942 that would achieve the general goal of the formula. In the event that the messages turned over in any month do not fulfill a carrier's quota, the formula provides for that carrier an increased number of messages to assure that its quota is met thereafter. Day-to-day administration of the formula is conducted by the International Formula Committee, made up of representatives of the interested IRC's, which issues, through its staff the International Quota Bureau, instructions to WU directing it to distribute unrouted messages. We have the responsibility to oversee the operation of the formula as a whole and to assure that it continues to serve the public interest.

5. In 1961 we approved a plan under which the American Securities Corp. would purchase the WU Cables division and operate it as an independent IRC under the corporate name of Western Union International, Inc.[7] With the consummation of divestment in 1963, WU was no longer in a position where it could favor its own international operations. At that time, we approved certain modifications to the formula to reflect the effect of the divestment. However, we did not engage in a thoroughgoing review of the formula or make any structural revisions.

6. In December 1972, in Docket No. 19660, we initiated a general inquiry into the relationship between WU and the IRC's.[8] Among the matters included in that inquiry is the ITT petition at issue herein. This investigation arose from a series of interrelated filings bearing on the general question of the interface between the domestic and international telegraph fields. At the time we instituted this docket, we stated our belief that these matters would best be considered together. However, in view of the developments which have taken place since we instituted Docket No. 19660, it now appears that the best and most expeditious course is for us to consider further the ITT petition and associated responses separately at this time.

7. In its petition, ITT isolated three aspects of the present formula which it claims need correction: (1) the quota system; (2) "Schedule B"; and (3) the gateway concept. With respect to the quota system, ITT alleges that the technical, operational, and corporate changes which have occurred in the international message industry since 1943 have made it anachronistic. Under the formula, the quotas are designed to preserve each IRC's relative market share at its 1942 or earlier level. ITT notes that, although the present structure was arguably necessary to prevent WU from favoring its cable division, its continued validity is doubtful because the divestment of that division has put WU in a position where it can no longer so favor itself. More fundamentally, however, ITT charges that the existence of sizeable "deficiencies" and "overages," [9] and the fact that the formula provides

[7] 30 F.C.C. 323 (Docket No. 6517) (1961).
[8] 38 F.C.C. 2d 548 (1972).
[9] The amount of unrouted traffic due a carrier under its quota is affected by the amount of routed traffic it carries to a particular geographical subarea. If, through specifically-routed traffic alone, a carrier exceeds its quota for any category of traffic to a subarea (defined as an "overage") the formula calls for unrouted traffic to be withheld from that carrier in other categories so as to balance off the excess. Similarly, when unrouted traffic turned over to a carrier, when added to routed traffic, is insufficient to satisfy its quota to any subarea (a "deficiency"), it is to receive increased amounts of unrouted traffic thereafter until its deficiency is eliminated. ITT included figures in its petition to show that, on an overall basis, it and WUI were in an overage position, with RCA and others

no way to eliminate them, indicate a basic weakness which should be corrected. ITT also challenges the continued validity of "Schedule B" to the formula. Under this provision, WU agreed to give RCA certain amounts of traffic taken from its quotas to subareas of Area A (Atlantic).

ITT characterizes this agreement as a "gift," which was made to compensate RCA for its pre-merger lack of access to a domestic landline system,[10] and argues that any disadvantage RCA suffered must be considered to have been redressed in the time since the formula was instituted. Finally, ITT believes that, in connection with a review of the formula, the "gateway"[11] concept should be modified to reflect more accurately modern operating techniques, such as automatic switching, which permit handling to and from any point in the United States, without processing at present gateways, as contrasted with the IRC's manual handling of messages at gateways in 1943. In view of this, ITT believes gateway cities, which were tied to old operating limitations, should not be restricted to those currently authorized. ITT requests that, after hearing, the Commission revise the formula to meet modern conditions, including:

a) cancellation of all existing overages and deficiencies;
b) ordering WU to turn over unrouted traffic equally to all IRC's authorized to serve the point of destination;
c) cancellation of the quotas for the Canadian carriers under appendix 2 to the formula;[12]
d) ordering WU to turn over all routed traffic to the carrier of the sender's choice without any regard to the distribution of unrouted traffic, if it can carry the traffic out of the country;
e) prescribing that gateway traffic originated by an IRC itself should have no bearing on the distribution of outbound unrouted traffic.
f) cancellation of Schedule B of the formula; and
g) upon revision of the formula, abolition of gateway quotas and distribution of unrouted traffic filed with WU equally among the IRC's, allowing the IRC's to operate in "new" "gateway" cities upon an appropriate Section 214 finding.

in a deficit position. RCA was also in a deficit position with respect to Schedule B traffic. ITT argues that to the extent a carrier strives to increase its routed traffic, it loses unrouted traffic, so that the present formula inhibits competition. It also points out that RCA has no gateway quota to Areas A and B, so that its hinterland quota to those areas is not reduced by routed gateway traffic, as are ITT's and WUI's, where its gateway traffic is proportionately greater than it was in the base year. In view of its overages, and consequent lack of participation in unrouted traffic, it believes it is deprived of the opportunity to develop such market and to gain any return traffic from abroad that may result from the handling of unrouted traffic. It also cites other examples which it believes illustrate formula inequities—U.K. and Erie, South America, Japan.

[10] Prior to the merger, the WU Cables division relied on the WU domestic landline network to provide pickup and delivery for international message traffic to and from the hinterland. ITT's predecessor in the formula collectively referred to as the "A.C. & R. group," had an exclusive arrangement with Postal under which the ITT companies turned over to Postal unrouted inbound traffic in return for all its unrouted outbound traffic. RCA, however, had no such arrangements. RCA, however, did have a pre-merger contract with WU which provided that WU would turn some traffic over to it in return for RCA's inbound traffic. Additionally, RCA had arrangements with WU for exchange of traffic to and from trans-Pacific points.

[11] Section 222 provided that, notwithstanding the fact that pickup and delivery of international messages within the continental United States is defined as a domestic telegraph operation, the IRC's may pick up and deliver such messages "in the cities which constitute gateways approved by the Commission as points of entrance into or exit from the continental United States. . . ." *See* 47 U.S.C. § 222(a)(5) (1971).

[12] Appendix 1 to the formula provides that CNR and CPL be given quotas to certain points in Australasia. This provision arose because prior to the merger WU had a contract with CNR to turn over specifically-routed traffic destined for those points. Postal had a similar contract with CPL, except that unrouted traffic was also covered. The formula provides that specifically routed traffic be turned over to the two Canadian carriers and that sufficient unrouted traffic be turned over to CPL so that its pre-merger share of the total traffic (routed and unrouted) to the areas in question would be generally maintained. ITT argues that the contractual rights which resulted in this provision "can certainly be deemed to have been fulfilled. . . ." See ITT petition at pp. 11–12.

8. Essentially, none of the parties who filed comments herein disputes the factual allegations in the ITT petition. However, some of them take exception to certain features of the ITT proposal for a new formula. The position of the parties may be summarized as follows:

WU.—WU's present interest in the Formula lies in the establishment of provisions which are substantially clear and explicit so that it may readily determine the identity of the IRC to which traffic is to be transferred, and the means to make interpretations of the formula or resolve disputes. Any revision should provide for the distribution to be made by WU of international record traffic specifically routed via a Canadian carrier, or via an IRC which cannot carry such traffic out of the United States. In addition, any revision should not inhibit WU from changing its operating methods in pursuance of its modernization program. The present Formula is becoming increasingly incompatible with modern handling and processing of international telegrams. Instead of the present formula, all traffic should be required to be specifically routed by the sender. If this cannot be done, then responsibility for distribution should be transferred to an entity of the IRC's such as the International Quota Bureau. Failing this, unrouted traffic to a particular area should be transferred to one IRC, so as to simplify handlings. All costs of distribution should be borne by the IRC's, and WU should make a reasonable profit on its services in distribution of traffic. So far as ITT proposes expansion of existing gateways, WU opposes such a step. Since it has withdrawn from international operations, the IRC's should not expand into the domestic field. Moreover, the IRC's should not maintain independent offices in present gateways, but should use WU offices. In any event, any treatment of the gateway question in the Formula should be resolved in a manner consistent with any modification of the industry structure in Docket No. 19600.

RCA.—The ITT proposal seeks only to advance ITT's interest. ITT has an overage of $23.9 million as of October 1972, and RCA has an underage of $45.8 million. RCA says the cumulative overages and underages must be viewed in light of intentions at the time the Formula was prescribed. It asserts that the Formula reflects the pre-merger situation, in which WU Cables and ITT were closely allied with an extensive landline system, and have roughly equal proportions of in and out traffic, whereas RCA could never approach this position since it had no close affiliation with a landline system. RCA voluntarily gave up gateway quotas to Areas A and B, to rely on its own efforts. ITT, which has said it did not plan to open additional gateway offices, promptly did so and doubled its advantage, obtaining additional traffic and diminishing unrouted traffic in gateways. WUI received substantial Area C traffic for which it never had quotas, giving it overages and causing RCA to have underages. WU entered into solicitation practices for WUI in both gateways and hinterland, and WUI has a hinterland overage while RCA and ITT have deficits. ITT's position ignores its own cumulative overage, and it has failed to establish a cause and effect relationship for its contention. It has not been inhibited by the Formula. With regard to Schedule B, it was neither a gift to RCA nor a price for unanimity on the Formula submitted to the Commission. ITT did not oppose it in 1943, and RCA does not take a single unrouted message from ITT. Since RCA has a substantial deficit under Schedule B, it cannot be said to have been compensated for the inequalities intended to be removed by Schedule B. In summary, ITT's approach is an arbitrary one, and reflects none of the public interest considerations recognized as important by the Commission in 1943. RCA, with the heaviest deficit, would be the chief victim. The basic problem is one of not having a method to liquidate deficiencies, and any revision must recognize and account for them. ITT has failed to make a *prima facie* case.

WUI.—In the interest of expedition, any possible Formula revisions should be explored preliminarily by the interested carriers, using Section XI of the Formula, which provides for an International Formula Committee, as a vehicle. Such course could eliminate or minimize tedious formal hearings. WUI will not comment at this time on ITT's proposals, since it is preferable to explore them in the Committee, and, moreover, they are lacking in detail, and there is a question as to whether the showing made is adequate to warrant a Section 222 proceeding. In any event, such issues as free direct access and gateway city charges should be first resolved.

French Cable.—As French is not a party to the formula, it made no comment either on ITT's allegations or on its recommendations. However, it did indicate its desire to participate in the resolution of the conflict.

TRT.—This company supports the ITT view that the Formula requires revision. It proposes the following changes:

1. that existing "overages" and "deficiencies" be eliminated;
2. that any carrier handling routed traffic to a foreign or overseas destination be eligible to handle unrouted traffic;
3. that each carrier be allocated a percentage of unrouted traffic tolls to each country or overseas destination in proportion to that carrier's share of the total routed traffic tolls to that country or overseas destination:
4. that in determining each carrier's share of the total routed traffic tolls only those tolls which are derived from messages originating outside the gateways be included;
5. that the percentages for each carrier and each country or overseas destination be determined annually for the latest complete year;
6. that the carriers report to the FCC the number and the tolls of all routed and unrouted messages to each country or overseas destination;
7. that the computation of the percentages and the verification of the reporting be the responsibility of the FCC;
8. that the IQB be dissolved.

TRT states that: The suggestion above that the unrouted traffic be allocated by country or overseas destination in proportion to the routed traffic for each carrier which is derived from messages originating outside the gateways would serve as an incentive for each carrier to maintain service quality and to be responsive to customer's requirements. Competition would be encouraged, and successes in innovation and providing more attractive service to the using public would be rewarded by increases in both routed and unrouted traffic. (Under the present quota system, increases in routed traffic have *negative* effects on unrouted traffic.) However, it is essential that tolls generated from messages originating within the gateways be excluded in calculating the amount of total routed traffic for each carrier so as to avoid undue preferences to the three larger U.S. international record carriers resulting from their favored gateway status. The suggested manner of handling unrouted outbound traffic has the advantages of simplicity and equity. It also provides for automatic updating of the percentage distributions annually. Furthermore, this method would not be affected by any changes in gateways, or hinterland direct access that the Commission might make in the future.

CPL.—CPL opposes the ITT proposal with respect to unrouted traffic distributed to Canadian carriers, arguing that it would violate Section 222(e)(1) in that CPL had an exclusive contract with Postal Telegraph, assumed by WU after merger, under which CPL received unrouted traffic to Australasia and the British West Indies, and, in return, transferred to Postal all inbound traffic from these areas to routes served by Postal. It states that the Commission, in adopting the Formula, agreed that WU should continue to transfer to CPL sufficient outbound traffic to these areas to maintain its percentage share in total routed and unrouted traffic to these points. The memorandum of understanding adopting the contract is still in existence, having been periodically renewed, so that CPL's pre-existing contract rights prevent the ITT proposed change. Moreover, equity could militate against a change, since CPL transfers traffic to WU. In addition, statements made by the Commission in its decision in the Formula in 1943, support continuance of the quotas.

CVR.—This Canadian company also opposes the ITT proposal and takes exception to the statement that any pre-merger contract with WU or Postal Telegraph can be now deemed to have been fulfilled. It believes the contractual obligations of WU are subsisting in law, and that its right to a quota continues

subject to the same protection as those of other international carriers. In the alternative, it suggests that if the present Formula requires revision, any new Formula should not liquidate deficiencies without some compensatory equitable provision being made in favor of the carriers in a deficiency position.

9. In response to the more recent comments, ITT points out that the Commission has never reviewed the Formula, and asserts that none of the commenting carriers has pointed out a good reason for delay. It states that, although it had suggested specific remedies, it does not contend that no other remedy would serve the public interest. It questions the feasibility of the WU suggestion that all traffic be routed, (though it states that this is an ultimate objective or a reasonable objective), in view of the effort required to educate the public, and the tendency of WU employees to treat a specification of "WU" as a routing via WUI. It believes that TRT's proposal is more viable, insofar as it suggests that unrouted traffic be allocated in proportion to routed traffic. It characterizes the responses of others as obstructionist or dilatory. ITT says that the CPL–WU memorandum of understanding was extended without consideration by the Commission; that the overages and deficiencies referred to by RCA illustrate the need for a new Formula and do not represent commitments or obligations of any carrier; and that the WUI suggestion, that free direct access and additional gateways require prior resolution, is without merit.

DISCUSSION

10. The formula presently in effect was prescribed by us in 1943. While we believed at that time that the formula reasonably fulfilled the Section 222(e)(1) requirements, we have recognized that it might become outmoded with the passage of time. In fact, at the time we approved the divestment proposal of WU and American Securities Corp. we noted that

> [d]uring the period since [the merger], it has always been at least implicit in our administration of the formula that, in addition to being a device for an equitable distribution of outbound traffic, handled by [WU], among the international carriers, the formula as now written is an interim document designed to provide protection to the other international carriers against any favoritism on behalf of [WU's] cable system so long as such system is part of Western Union. 30 F.C.C. 323, 373–4 (1961).

In that proceeding we did approve amendments to the formula to reflect the fact that thereafter WUI (the divested WU cables division) would be an independent IRC with no connection to WU. However, since we noted that we had not been asked to overhaul the basic structure of the formula, we left that question to an appropriate proceeding. The matters set out in the instant petition and responses thereto, raise a substantial question as to whether the formula has kept pace with the developments in the industry since 1943. We agree that it is time, some 30 years later, to re-evaluate that structure in light of present realities. While we included this subject in Docket No. 19660, to be considered along with other matters, it appears that, at this time, a more intensive analysis should be given to the formula and possible revisions. Accordingly, we are instituting a special investigation into this matter.

se of other international carriers. In the esent Formula requires revision, any new cies without some compensatory equitable rriers in a deficiency position.

11. While we agree that the formula needs to be re-examined. we think that our inquiry should be broader than that requested in the ITT petition. Both TRT and WU have made alternative proposals which appear to us equally worthy of further consideration. Other interested parties, in view of our desire thoroughly to explore the question of formula revision, may wish to offer other proposals for our consideration at this time. So that the resulting revisions may best serve the public interest, we believe that, consistent with an expeditious resolution of this matter, we should consider all relevant views. We intend, therefore, that the investigation ordered herein should explore the whole matter without being tied to the proposals and views of any one party.

12. We note that ITT has acknowledged that its own views are not necessarily the only ones which will serve the public interest. ITT may well wish to review further its announced position in view of the alternatives advanced by the other parties. Some of the parties herein withheld comment on the merits of the ITT petition pending further formal action. Moreover, the parties have not commented on the WU or TRT proposals, which were submitted in response to the letter of May 25, 1973, from the Chief, Common Carrier Bureau.

13. Under these circumstances, the most expeditious course is to have the interested parties submit detailed and explicit written positions setting out the facts and other considerations (legal, policy, etc.) which are relevant to a decision on the several issues presented by the pleadings. We shall provide for responses thereto and replies. We believe that this proceeding is an appropriate one for the application of this approach. To the extent that an oral hearing is necessary or desirable, upon review of the submissions indicated above, we shall, of course, consider an appropriate request by any party, or take action on our own motion.

14. We have referred above (paragraph 11) to the possibility that other parties may wish to propose changes in addition to those suggested by ITT, TRT, and WU. Should this be so, any such party may, to the extent it believes our order herein otherwise precludes such submission, request an appropriate amendment of such order.

15. Accordingly, IT IS ORDERED, pursuant to Sections 4(i), 4(j), 201, 222, and 403 of the Communications Act of 1934, That an investigation is hereby instituted to determine whether the distribution of telegraph message traffic under the formula prescribed pursuant to Section 222(e)(1) of the Communications Act for the distribution of outbound international message traffic handled by The Western Union Telegraph Co. is unjust, unreasonable, or inequitable or not in the public interest and, if so, the nature of the amendments which the Commission should make thereto;

16. IT IS FURTHER ORDERED, that the investigation ordered herein shall include inquiry into the following issues:

(1) The exact manner in which the distribution of traffic is presently being made, broken down by carrier, category of traffic, and areas and sub-areas.

(2) The nature, extent and reason for the existing overages and deficiencies in assigned quotas. In this connection, each carrier shall present full data with respect to its overages or deficiencies, by area and sub-areas, as of each year-end for the ten (10) years ending December 31, 1972, and an estimate for the year

104-018—74——14

ending December 31, 1973; as well as the totals, by area and sub-area, since distribution began under the formula.

(3) The present defects in the formula, pointing out with specificity the effect of each claimed defect not only on the respondent, but also on other international record carriers and on the quality of service provided to and the rates charged the using public.

(4) The specific amendments which should be made to the formula to remove each such defect, the effect each such amendment will have on respondent, other international record carriers, and on the quality of service provided to and the rates charged the using public.

In answering issues (3) and (4), attention should be directed to the proposals of ITT, WU, and TRT. Responses and replies will, of course, also be directed to any new matter which may be raised in the initial statements filed pursuant hereto.[13]

17. IT IS FURTHER ORDERED, That, to the extent provided for herein, the petition for rulemaking filed by ITT World Communications Inc. IS GRANTED and is otherwise DENIED in all respects;

18. IT IS FURTHER ORDERED, That ITT World Communications Inc., RCA Global Communications, Inc., Western Union International, Inc., TRT Telecommunications Corp., The French Telegraph Cable Co., The Western Union Telegraph Co., Canadian National Railway Co., Canadian Pacific, Ltd., and United States-Liberia Radio Corporation are hereby made parties respondent to the investigation instituted herein;

19. IT IS FURTHER ORDERED, That the International Formula Committee, including its staff the International Quota Bureau, is hereby made a party respondent for the purpose of furnishing such information that it may have within its possession or knowledge concerning the operation of the formula that may be required by the Commission for the resolution of this matter;

20. IT IS FURTHER ORDERED, That the following procedures will be followed in this investigation:

(1) Respondents shall file, and other interested persons may file, within sixty (60) days of the release of this Order, statements of fact and memorandums of law relative to the issues set out herein;

(2) Responses to initial statements shall be filed thirty (30) days after the statements are due, and replies to such responses shall be filed within fifteen (15) days after the filing of responses;

(3) All statements filed by a respondent, or other interested persons, shall be served upon all other respondents and all further pleadings shall be served on those respondents and all other persons filing statements herein;

21. IT IS FURTHER ORDERED, That the Commission will make such further orders herein as are necessary or desirable.

FEDERAL COMMUNICATIONS COMMISSION,
VINCENT J. MULLINS, *Secretary.*

[13] We do not, however, think that a resolution of the issue raised by ITT with respect to redefining gateway concepts is a prerequisite to revision of the formula and do not propose to address it in this proceeding.

FCC 74-565

BEFORE THE

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON, D.C. 20554

In the Matter of INTERNATIONAL RECORD CARRIERS' SCOPE OF OPERATIONS IN THE CONTINENTAL UNITED STATES, INCLUDING POSSIBLE REVISIONS TO THE FORMULA PRESCRIBED UNDER SECTION 222 OF THE COMMUNICATIONS ACT	Docket No. 19660 RM-690

MEMORANDUM OPINION AND ORDER

(Adopted May 30, 1974; Released June 10, 1974)

BY THE COMMISSION: COMMISSIONER QUELLO NOT PARTICIPATING.

1. By Memorandum Opinion and Order (Order) in the above-captioned matter released November 26, 1973, 43 F.C.C. 2d 1174, we instituted an investigation to determine whether the distribution by The Western Union Telegraph Co. (WU) to the international record carriers (IRC's) of outbound international message telegraph traffic under the formula prescribed pursuant to Section 222(e)(1) of the Communications Act is unjust, unreasonable, or inequitable or not in the public interest and whether the Commission should prescribe any amendments to such formula. The Commission has before it for consideration letters, all dated March 11, 1974, from RCA Global Communications, Inc. (RCA), Western Union International, Inc. (WUI), TRT Telecommunications Corp. (TRT), and ITT World Communications Inc. (ITT) which seeks an interpretation of our November 26 Order. RCA replied to the ITT letter on March 27, 1974.

2. In the above Order, we designated for investigation the following issues:

(1) The exact manner in which the distributi of traffic is presently being made, broken down by carrier, category of traffic, and areas and sub-areas.

(2) The nature, extent and reason for the existing overages and deficiencies in assigned quotas. In this connection, each carrier shall present full data with respect to its overages or deficiencies, by area and sub-area, as of each year-end for the ten (10) years ending December 31, 1972, and an estimate for the year ending December 31, 1973; as well as the totals, by area and sub-area, since distribution began under the formula.

(3) The present defects in the formula, pointing out with specificity the effect of each defect, not only on the respondent, but also on other international record carriers and on the quality of service provided to and rates charged the using public.

(4) The specific amendments which should be made to the formula to remove each such defect, the effect each such amend-

ment will have on respondent, other international record carriers, and on the quality of service provided to and the rates charged the using public.

We also directed the parties to file with us, within 60 days of the release of the Order, statements of fact and memorandums of law relative to the designated issues, which would set forth their respective positions on the defects in the formula, if any, the need for amendment, and any recommended changes.

3. The present request arises from a series of meetings between the IRC's, WU, and the staff which were convened at RCA's request to discuss RCA's contention that certain statistical data called for by the issues were unavailable.[1] After discussion, the parties appear to have agreed upon a plan whereby WU would collect the desired data and the participating IRC's would bear equitably the costs of the study. Some parties, most notably ITT, object to the delay in filing carrier comments which the proposed study will entail. By letter of April 11, 1974, WU stated that it can develop the computer program needed for the study in about two months and will be prepared to begin collecting data on July 1. ITT stated that while the data in question would be helpful, it did not believe they were necessary to respond to the issues and that the delay would therefore be unjustified.

4. Both RCA and WUI urge the necessity of the proposed study before the parties can respond to the issues. They argue that the issues require a statistical analysis of the manner in which international message traffic is presently distributed under the formula, broken down by carrier, area, and sub-area. The carriers say they lack the data to make these analyses because the data supplied by the International Quota Bureau (IQB)[2] are incomplete, in that they do not include any figures for messages transferred by WU to an IRC who is entitled under the formula to all unrouted traffic to a particular point. Further, they contend that the IQB data which do exist are distorted and thus unreliable. In support of this contention, RCA cites WU's practice of treating messages filed with a WU central telephone bureau as hinterland traffic even though the originating customer is located in a gateway city. Also, WU does not differentiate between routed and unrouted messages filed in those WU public offices which, under the formula, constitute WUI public offices. Finally, RCA notes that there is a discrepancy between the IQB figures and the totals the IRC's report in the annual reports filed under Section 43.61 of the Commission's Rules. The proposed study is necessary, they say, to provide accurate data from which to determine the effects on a given carrier of proposed changes in the formula. They contend that because of the hearing requirement in Section 222(e)(3)

[1] ITT, RCA, WUI, and TRT were the IRC's who participated, while the others, who had no objection to the meetings, chose not to participate.

[2] The IQB is the operating arm of the International Formula Committee (IFC) and oversees the administration of the Formula. The IFC is a body composed of representatives of the IRC's entitled to quotas under the formula and was given the responsibility for administering the formula (subject to review by the Commission). The IFC, including the IQB, was made a party to this proceeding for the purpose of providing data within its files. Copies of the information supplied to the IRC's have been filed with the Commission and are part of the record in this proceeding.

nd was given the responsibility for
e Commission). The IFC, including
he purpose of providing data within
C's have been filed with the Commis-

of the Act, the Commission cannot lawfully change the formula without information on such effects.[3]

5. ITT and TRT, on the other hand, take the position that the data which would result from the proposed study are unnecessary to respond to the issues and therefore object to the substantial delay which would be occasioned thereby. ITT contends that the issues do not require statistical analyses and that a qualitative approach would equally be appropriate. ITT does not contend that the Commission should ignore the quantitative effect of proposed amendments, but that such a determination is not a pre-requisite to carrier responses. If the Commission wants the data on quantitative effects for its own consideration of the formula question, ITT believes it should direct the parties to conduct the study but it contends that the Commission, rather than the parties, should perform the analysis. The study could thus be conducted parallel in time with the preparation of the carrier responses and substantial delay would be avoided.

DISCUSSION

6. The dispute considered herein arises from language in the designated issues which requires the parties to include certain statistical information with their comments. In framing the issues, we had assumed that an ample data base was readily available and that there would, therefore, be no problem in providing the requested information. Apparently, we were in error.

7. Our purpose was to elicit specific details of present and past distribution of traffic under the existing formula, or anticipated distribution under a revised formula, to assist us in a quantitative, as distinguished from a qualitative, evaluation of the present formula and of any proposed revisions. While it may be that such quantitative evaluation is not essential under Section 222(e)(3), it could be helpful, at least, to our understanding of the degree to which problems existed in the present formula, and the extent to which any revisions would result in a redistribution of traffic.

8. We think, however, that the proceeding can move ahead at this time on the basic qualitative questions, without prejudice to any respondent, and that the proposed WU study can proceed concurrently. As we stated in our November 26 Order, the gravaman of the ITT petition is that the quota system basic to the formula has been overtaken by events since 1943, so that present institutional and policy considerations require that the formula be revised. The others interested in the matter have previously commented in a vein which did not rest on precise quantitative analysis. We think that it would be most efficient for the parties now to address the issues using such statistical documentation as may be available from the IQB data as well as such additional data they may have in their possession.

[3] WU also filed a letter, but it did not advance an adversary position since the overall formula question does not directly affect any WU interest. Rather, the stated purpose of this letter was to comment on two factual assertions in the RCA letter. First, WU does not agree to change its procedures to give IRC's the data they requested. Second, WU disagrees with RCA's statement that it had said the study would take "at least three months."

In the meantime, we believe that WU should proceed promptly with the study and present the results at the earliest possible time.[4]

9. We shall therefore require the parties to file, within three weeks of the release of this order, the statements and memorandums of law called for in our prior Order. Since the parties have been on notice of this inquiry for some time, this should allow sufficient time for preparation of the comments. We shall also order the parties, in view of the progress made in defining a statistical sampling procedure to supply data to complete that already available, to proceed immediately with the proposed statistical study, and to submit it to us promptly upon its completion. We shall thereupon make provision for the parties to file any necessary further comments, both on the study and to supplement the comments filed in accordance with this Order.

10. Accordingly, IT IS ORDERED, that the statements of fact and memorandums of law with respect to the issues designated in the above-captioned proceeding shall be filed with the Commission by all parties respondent within three (3) weeks of the release of this Order.

11. IT IS FURTHER ORDERED, that the parties filing the initial statements may file responsive comments within thirty (30) days after the statements are due and replies to such responses may be filed within fifteen (15) days thereafter;

12. IT IS FURTHER ORDERED, that The Western Union Telegraph Company shall conduct a study of outbound international message traffic, covering three consecutive one-week periods, according to the plan agreed upon by the parties at the meetings referred to herein and shall file such study with the Commission and the parties upon its completion;

13. IT IS FURTHER ORDERED, that ITT World Communications Inc., RCA Global Communications, Inc., Western Union International, Inc. and TRT Telecommunications Corp. shall bear the costs of the above study according to agreement between the carriers; and

14. IT IS FURTHER ORDERED, that upon filing of the completed study, we will take such further action and issue such further orders as will then appear appropriate.

FEDERAL COMMUNICATIONS COMMISSION,
VINCENT J. MULLINS, *Secretary.*

---

[4] The position of RCA and WUI, if followed to its logical conclusion would preclude any revision of the formula from ever taking place if detailed data on past distribution were not available. Under Section XI of the Formula, the IQB is the responsibility of the several carriers participating in the Formula and, in view of the long pendency of the ITT petition, it appears that there was ample time for such carriers to have required that such data, now considered essential, be collected.

RCA Global Communications, Inc | 2030 M Street, NW | Washington, DC 20036 | Telephone (703) 558-[illegible]15

83

Mr. Vincent J. Mullins
Secretary
Federal Communications Commission
Washington, D. C. 20554

[illegible]

Dear Mr. Mullins:

January 15, 1974

angelosi
nsel
, D.C.

On November 21, 1973 the Commission adopted a Memorandum Opinion and Order (FCC 73-1203) instituting an investigation to determine whether the International Formula for the distribution of outbound international message traffic handled by The Western Union Telegraph Company is unjust, unreasonable, inequitable or not in the public interest, and if so, what changes may be required. The Commission stated that the most expeditious course to follow procedurally was to have the interested parties submit detailed and explicit written positions setting out the relevant facts and other considerations. Responses and replies to the written positions were also provided for. The Commission further stated that "to the extent that an oral hearing is necessary or desirable, upon review of the submission indicated above, we shall, of course, consider an appropriate request by any party, or take action on our own motion."

RCA Global Communications, Inc. believes that the paper rulemaking procedure being used by the Commission for the determination of the lawfulness of the existing International Formula is contrary to the statutory requirement in Section 222(e)(3) that such determinations be made only after a "full hearing." As we have shown in previous briefs and during oral argument on the question of the Commission's ability to grant Western Union an interim increase in the division of revenues for the domestic handling of international message telegrams, the requirement for a "full hearing" in Section 222 is only satisfied by means of an oral, evidentiary hearing and not by a paper rulemaking proceeding.

However, while we believe the procedure instituted by the Commission to be unlawful, Section 1.106 of the Commission's Rules and Regulations provides that petitions for reconsideration of an interlocutory ruling will not be entertained. Since our objection appears to go to an interlocutory matter, we will not, in this case, file a petition for reconsideration but will only inform the Commission that we will seek to protect our interest to procedural due process at the appropriate times and in accordance with the Commission's Rules.

Very truly yours,

Carl J. Campbell

In the Matter of	)	
	)	
International Record Carriers' Scope of Operations in the Continental United States, Including Possible Revisions to the Formula Prescribed under Section 222 of the Communications Act.	)	Docket No. 19660 RM-690

To: The Commission

COMMENTS OF RCA GLOBAL COMMUNICATIONS, INC.

RCA Global Communications, Inc. (RCA Globcom) hereby provides its comments in response to the Commission's Memorandum Opinion and Order, (Order), 43 F.C.C. 2d 1174, on the basic question of whether the existing formula under which distribution of outbound international message telegrams is made is unjust, unreasonable, and inequitable, or not in the public interest and, if so, what changes in the formula should be made.* In furtherance of this general question, the Commission specified that the investigation should also include inquiry into the following issues:

---

* The comments provided herein are without prejudice to our position that the requirement for a full hearing contained in Section 222(e)(3) can only be satisfied by an oral, evidentiary hearing and not by a paper rulemaking one.

(1) The exact manner in which the distribution of traffic is presently being made, broken down by carrier, category of traffic, and areas and sub-areas.

(2) The nature, extent and reason for the existing overages and deficiencies in assigned quotas. In this connection, each carrier shall present full data with respect to its overages or deficiencies, by area and sub-area, as of each year-end for the ten (10) years ending December 31, 1972, and an estimate for the year ending December 31, 1973; as well as the totals, by area and sub-area, since distribution began under the formula.

(3) The present defects in the formula, pointing out with specificity the effect of each defect, not only on the respondent, but also on other international record carriers and on the quality of service provided to and rates charged the using public.

(4) The specific amendments which should be made to the formula to remove each such defect, the effect each such amendment will have on respondent, other international record carriers, and on the quality of service provided to and the rates charged the using public.

Preliminary Statement

RCA Globcom does not believe that it is necessary to recount the various provisions of the formula or the general manner in which they operate. This background information has been provided in the Commission's Order and various pleadings already filed and there is no need to repeat it. Likewise, it is not necessary to detail the history of this proceeding other than as it relates to our ability to fully respond to the issues of inquiry set out by the Commission.

In this respect, it should be noted that RCA Globcom is unable to answer issues (1) and (2) insofar as they require the production of information on the actual distribution being made under the formula today or issues (3) and (4) as they relate to forecasting effects on individual carriers of changes in the formula. As the Commission recognized in its Memorandum Opinion and Order released June 10, 1974 (FCC 74-565), the data base needed to answer these questions is not in existence. For that reason the Commission has required that special studies utilizing statistical sampling procedures be done so that the needed information can be accumulated. The design format of these studies has been submitted by The Western Union Telegraph Company (Western Union) and is now being reviewed by RCA Globcom. After the design of the studies has been approved and the studies themselves completed, RCA Globcom will be in a position to accurately comment on these issues and will do so.

As to the general issue on the lawfulness of the formula, RCA Globcom believes that the Commission's determination in the Western Union Merger Proceeding, 10 F.C.C. 184 (1943) is still valid. In that decision the Commission found that the existing formula to be just, reasonable, equitable, and in the public interest and that it would effectuate the purposes of Section 222(e) of the Communications Act. The passage of time has not invalidated that determination. Specifically, we will show the following in the detailed comments below:

- A carrier seeking a change in the formula must first carry the burden of proving that the present formula is unjust, unreasonable, and inequitable, or not in the public interest.

- The need for change in the formula must be evaluated in terms of the public interest and not solely whether an individual carrier will benefit from the change.

- A change in the formula that would increase sales expenses of the carriers or arbitrarily redistribute existing traffic would not serve the public interest.

- If a change in the formula is found to be in the public interest, the accumulated overages and deficiencies must be recognized.

The Order Appears To Improperly Shift The Burden Of Showing The Unlawfulness Of The Existing Formula From ITT To The Other International Record Carriers

After discussing the various petitions before it, the Commission stated that the question to be decided in this proceeding is whether the existing formula is outmoded and needs to be changed. It then asserted that "the ITT petition and associated pleadings make a prima facie showing that the current formula is or will be unjust, unreasonable, or inequitable and thus not in the public interest." We submit that this assertion by the Commission is improper and totally without support. If followed by the Commission, it would act to improperly shift the initial burden of showing the unlawfulness of the existing formula from ITT to the other international carriers that believe the formula operates in the

public interest in accordance with the Commission's findings in 1943. Such a shift in the burden of proof, not only is contrary to the express provision of the Communications Act, but it also violates the Administrative Procedure Act, and is at odds with the established law that Commission orders have the presumption of validity. In fact, it must rest on the legally unacceptable principle that time alone will render a valid decision unlawful.

Section 222(e)(3) states that whenever the Commission finds that the existing method of distributing telegraph traffic "is or will be unjust, unreasonable, or inequitable, or not in the public interest," the Commission will prescribe a change in the formula so that it will conform to the statutory standard. In accordance with the statute, the Commission's duty is twofold. It must find the existing method of distribution to be contrary to the public interest and only then may it undertake to prescribe a different formula.

In the past the Commission has always followed this two-step procedure when dealing with the formula. In its decision in the Western Union Divestment Case, 30 F.C.C. 323 (1961), the Commission stated clearly

> there are two questions to be resolved. The first relates to the propriety of providing for changes in the formula in the agreement [for the divestment] and the second relates to whether we can make the finding required by section 222(e)(3) that the present formula is now or, if the plan before us is consummated will be unjust, unreasonable, inequitable, or not in the public interest. Id. at 371.

The Commission then went on to evaluate the specific proposals before it "in light of the obligations imposed . . . by subsection 222(e)(3)." Id. at 372.

The apparent attempt to discard the first phase of the two-step process would immediately and improperly cast the burden of proving that the existing formula is lawful upon RCA Globcom and the other carriers opposing a change would be also contrary to the Administrative Procedure Act. Thus Section 556(e) provides that the proponent of a rule or order has the burden of proof unless otherwise provided by statute or rule.* ITT, as proponent of a change in the formula, is required to carry the burden of showing the existing method of distribution found by the Commission to be in the public interest is, in fact, not in the public interest.

The language in the recent Order is at odds with the normal presumption given to Commission orders. It must be remembered that the formula is not a mere agreement of the parties. It was prescribed by the Commission as being in the public interest. If the question as to its validity were raised in a court, there would be no doubt that its orders would be entitled to a presumption of validity. See Florida Citrus

---

*Section 556 is applicable to this proceeding since Section 222 is a proceeding that can only be decided "after a full hearing". As we stated to the Commission in our letter of January 15, 1974, and showed in brief in Docket No. 19660, the Western Union Landlines Case, Section 222 is only satisfied by means of an oral, evidentiary hearing and not by a paper rulemaking proceeding.

Commission v. United States, 144 F. Supp. 517 (1956). Therefore, the Commission should in this proceeding accord the formula, which it prescribed as being in the public interest, the presumption of being still lawful and should not proceed with the prescription of a new formula unless the existing one has been conclusively shown to be contrary to the public interest.

The Notice gives the impression that the present formula is thought to be contrary to the public interest because it is "anachronistic", "outmoded" or just old. It is certainly not anachronistic and to upset it merely because it is 30 years old must as a legal concept be rejected outright. The age of a Commission order does not give a presumption of invalidity; if anything, the contrary must be the case since the formula has withstood the test of time. Thus in an analogous case, the Interstate Commerce Commission found that the age of an existing division of revenues between two rail carriers affords no presumption that it was unreasonable. New England Divisions Case, 62 I.C.C. 513, at 563. It is apparent that the acceptance of the opposite position would mean that every decision older than a certain limit, and certainly the Communications Act itself, would be anachronistic as well as prima facie unlawful.

It is also strange that the Commission could have been so quick to state that a prima facie case has been made that the formula is contrary to the public interest since the main

pleading under consideration by the Commission was filed in 1964.* Thus, it would seem implausible that a pleading could make a prima facie case in 1974 when it was insufficient to present such a case in 1964. Surely Commission inaction for the past ten years indicates either that it did not feel in 1964 or in the intervening years that the ITT petition possessed sufficient merit to justify a hearing or that the Commission for ten years tolerated a formula which a pleading before it demonstrated to be prima facie unjust and unreasonable. We do not believe that the latter situation would be permitted to exist, much less to continue, without attention for a decade. One must consider then that the Commission misspoke when it stated that ITT has already made a prima facie showing.

The Criteria Used To Determine Whether The Existing Formula Is Lawful Is The Public Interest And Not Solely The Private Interest of ITT

Section 222(e)(3) provides that whenever the Commission finds existing formula to be unjust, unreasonable, or inequitable, or not in the public interest, it shall by order prescribe a formula which will be just, reasonable, equitable,

*The additional comments filed by ITT on June 26, 1973 did not substantively add to their position or present additional facts indicating that a revision was desirable or necessary to meet the statutory standard.

and in the public interest. It is quite clear that this statutory standard cannot be satisfied by merely examining the benefits to be received by a single carrier from a change in the formula. Rather the change must be examined in the context of its effect on all of the carriers and most particularly on the public interest. The Commission has expressed the statutory obligation in the following manner:

> In arriving at a formula which is just, reasonable, equitable, and in the public interest, consideration should not be limited to a single factor which may favor one particular set of interests or another. Weight should be given to the equities as between the various carriers, and to the interest of the public in maintaining the strength and service of all carriers which are in a position to render efficient economical service, or, in the terms of section 1 of the Communications Act of 1934, to the development of "a rapid, efficient,*** and worldwide wire and radio communications service with adequate facilities at reasonable charges for the purpose of the national defense," and for other designated purposes. Western Union Merger Proceeding, at 189.

At this point, ITT has completely failed to meet the standard just described. Its original complaint filed in 1964 and the supplementing letter filed on July 11, 1973 are limited to a exposition of why the formula will benefit ITT. The effects on the other carriers are completely ignored.

In its complaint, ITT devotes approximately half of the document to a recitation of the manner in which the formula operates. Thereafter it discusses several provisions of the

formula which cause it in some instances to receive less traffic than it desires. It appears that the main thrust of ITT's complaint is that the formula is structured in such a manner that it, in some way, inhibits competition. ITT states that under the quota system, "the harder a given international carrier works to have messages routed over its facilities by sender's "Via" the less likely it is to receive a share of the unrouted traffic which, whatever the quantity thereof, will always be available from the WU landlines pool." Complaint, page 8.

We assume that the ITT position must rest on the dubious assumption that the more the carriers spend on selling activities for the static and declining amount of international message telegrams the more the public interest is served. Such spending cannot automatically be equated with the public interest.*

In Federal Communications Commission v. RCA Communications, Inc. 346 U.S. 86 (1953), the Supreme Court stated that the existence of a regulatory structure under Congressionally devised public interest standards meant that the Commission could not equate competition with the public interest unless it could be shown to be beneficial.

---

*ITT's position in the instant proceeding is at odds with the position it so strongly, and correctly stated in requesting reconsideration of the grant of authority to TRT to serve the United Kingdom. There it stated that a carrier seeking Section 214 authorization must show that the public interest will be served and not only that of the individual carrier applying for facilities to a new point.

This position has recently been reaffirmed by the Court of Appeals when it stated:

> Looming large in the Commission's rationale, indeed, undeniably the key factor in its decision, is competition. Competition as a factor might have some relevance to the FCC decision, if competition had been shown to be of benefit to the public on the communication routes in question. Yet it is all too embarrassingly apparent that the Commission has been thinking about competition, not in terms primarily as to its benefit to the public, but specifically with the objective of equalizing competition among competitors.
>
> This is not the objective or role assigned by law to the Federal Communications Commission. As a result of focusing first on competitors, next on competition, and then on the public interest, the FCC has given scant attention to the question of public convenience and necessity, and therefore has not met its statutorily imposed duty. Hawaiian Telephone Company v. Federal Communications Commission, Case No. 73-1018, _____ F. 2d _____ (D.C. Cir., decided May 3, 1974).

Therefore, until such time as the burden imposed by the statute can be met, the Commission cannot change the formula.

A Change In The Formula Which Would Increase Selling Costs Or Arbitrarily Redistribute The Existing Traffic Would Be Contrary To The Public Interest

To properly understand why increased selling costs will not benefit the public through reduced rates or other means, it is first necessary to look at the nature of international message telegram service. Its most significant aspect, whether domestic or international, is that it is, in some

respects, an obsolescent method of communications. The pure function of communicating between two points can be accomplished in most cases more quickly and/or less expensively by other services such as telex.

A second important consideration is the fact that message telegram service is the most labor-intensive telecommunications service offered today. Manpower is required at many steps in the handling process whether it be the reception over the counter at a public office or delivery by a telephone center designed to handle large quantities of messages.* The implication of this aspect is that message telegram costs will likely continue to increase. By its very nature, it is improbable that technological innovation, such as less costly cables or satellites, will have a significant stabilizing effect on telegram costs.

The first of these two factors can be seen in the decline in outbound message volume handled by the total international record industry. The statistics prepared by the International Quota Bureau for the years 1963 through 1973 show the following trend:

---

*RCA Globcom has, of course, made as much use as possible of computers to automatically handle international telegrams. But it is impossible to reduce the manpower required to the level used in telex or private line services.

Industry Outbound International Telegram Traffic
Originating In The Continental United States

	Number of Messages
1963	8,959,373
1964	9,266,979
1965	9,578,080
1966	9,819,131
1967	9,765,603
1968	10,076,172
1969	10,356,548
1970	9,976,768
1971	8,521,885
1972	8,191,540
1973	8,482,066

As can be seen, the message volume today is approximately 6% lower than it was in 1963. Further the highest volume year, 1969, was only approximately 16% greater than 1963. When compared with other services, such as telex and switched telephone,* these figures show a complete absence of significant growth over even part of the period.

An examination of the volumes of domestic message telegrams can also be informative. If it is assumed that the domestic experience reflects the longer term trend for the international market, then it can be seen that only decreases in volume can be expected.

---

*For example, the interantional record carriers' total telex revenue in 1963 was $13.7 million as compared to $114.4 in 1973. And, of course, the growth in terms of the number of calls is considerably greater since numerous rate reductions have been made since 1963.

Western Union Domestic Telegram Traffic

	Number of Messages (Millions)
1963	92.9
1964	86.8
1965	83.3
1966	81.7
1967	77.9
1968	74.4
1969	65.5
1970	57.9
1971	34.9
1972	30.5
1973	22.1

The second of the factors mentioned above, i.e. increasing costs due to the labor intensive feature of the service, means that there is no possibility that rate reductions will be made in an inflating economy. Rather every possible cost-saving measure must be implemented merely to maintain the existing level of rates.

These two factors completely distinguish the instant situation from those in which the Commission has found that increased competition would be useful as an aid to regulation and would bring benefits to the public. In the specialized common carrier field, the Commission explicitly recognized that it was authorizing entry into "a new, relatively untouched market in a field where even present demand is growing at a very rapid rate." Notice of Inquiry to Formulate Policy, 24 F.C.C. 2d 318 (1970), paragraph 34. It was only

after finding, among other things, that the potential market would support new carriers that the Commission decided that the public would benefit from their entry. Likewise, in the domestic satellite field, the Commission was presented with a new technological tool and was trying to ensure the provision of existing and new specialized services more economically and efficiently than through terrestrial facilities. Second Report and Order, 35 F.C.C. 2d 844 (1972). Neither of these considerations found to favor increased domestic competition are present with international message telegram service.

It should be emphasized that the Commission has already recognized that the formula services the public interest through restraining increasing selling costs and the deleterious effects thereof. It stated in the Western Union Merger Proceeding that the combination of routes, unrouted, and self-originated traffic

> diminishes the incentive of the international carriers to expend effort and revenues in attempts to divert traffic from each other by solicitation efforts which may not improve quality of service; and it also diminishes the necessity for these carriers to build up additional facilities for the collection of their own traffic, in duplication of existing facilities of the merged company. These savings should contribute to a more efficiently and economically operated international telegraph system. Id. at page 191.

These considerations are as sound today as when written in 1943.

A revision in the formula which would create an incentive for the carriers to greatly increase their sales and related expenses would not increase the quality of the service one whit or even the quantity of messages in any significant way. To date, no indication has been received that the international record carriers have failed to implement beneficial changes in the method of providing message telegrams. ITT, in its original complaint, recognized that carriers have introduced new services and brought about the application of improved operating techniques under the existing formula. Complaint, page 3. Rather, we believe whatever benefits are to be derived from competition are already being realized. Likewise, we have seen no suggestion by ITT that a revision in the formula will allow it to make rate reductions for the service. As already stated, ITT's proposal is not directed at the consuming public but rather only at its private interests in receiving a larger portion of the market.

Other suggestions for revising the formula would have a similar effect. Thus it has been suggested that each of the international carriers receive 1/3 of the pool of outbound message telegrams. This type of arbitrary realignment serves no purpose and would fail to reflect that the carriers have geared their plant capacity, other facilities, and personnel requirements to the size of the existing and forecasted

market. If, for example, the quantity of traffic we handle were arbitrarily reduced by a significant percentage, then excess capacity would be created. Yet RCA Globcom would have the same total costs of providing a smaller amount of traffic. Obviously the financial picture of providing message telegrams would be even worse than it is today. And exactly the opposite would happen to any carrier that received a substantial increase as a result of an arbitrary change in the formula. Its plant would be insufficient to properly handle the load of traffic forcing it to expand. This additional cost would have to be borne by the customers of the service. Yet the end result is that the same quantity of traffic would be handled but with less efficiency, greater cost to the carriers, and presumably an eventual increase in rates to the customers. Surely, there is no public interest in this type of result.

We, therefore, return to the basic question which the Commission must address: What is the basic fault with the existing formula? It provides a method of distributing the existing traffic; it does provide for direct routing when desired by the customer; it does use the competitive efforts of the carriers within limits which are recognized to yield public benefits; and it does give a stability to the industry which might otherwise not exist. In particular, the existence of the formula over several decades has shaped and sized the facilities maintained by each carrier. In return, each carrier

has certain provisions which uniquely benefit it. Thus, ITT receives all of the unrouted traffic to certain areas of the world. WUI has special benefits as a result of certain Western Union offices being considered as WUI's for the purpose of making the distribution under the formula. The total effect of these compromises is a method of distribution which serves the public interest.

Any Change In The Formula Must Recognize
The Accumulated Overages And Deficiencies

Even though RCA Globcom believes that public interest requires that the existing formula remain unchanged, the Commission must recognize, assuming for purposes of argument a change is made, that the accumulated overages and deficiencies represent a lawful obligation which may not equitably or legally be voided without the consent of all parties.

As was explained in the Order, an overage is the amount by which a carrier has exceeded its quota for any category of traffic to a subarea and a deficiency occurs when the routed and unrouted traffic turned over to a carrier is insufficient to satisfy the quota. ITT's accumulated overage as of December 1973 was $24.6 million meaning that it had received that much in excess of the quota specified in the formula. On the other hand, RCA Globcom had an accumulated deficiency of $49.8 million as of the same date.

To understand the significance and legal effect of these dollar amounts, it must be understood that the formula is not the same as a carrier-filed rate or an intercarrier contract which has not met the scrutiny of the Commission. Rather the overages and deficiencies result from a Commission prescribed formula which has the same force and effect as Section 222(e)(3) itself. Once having determined that the formula which gives rise to these amounts is in the public interest, the Commission cannot then go back and state that their accumulation is contrary to the public interest and should be voided. A Commission order to this effect would surely be beyond the Commission's authority. And aside from the Commission's legal obligation to recognize these accumulations, there exists RCA Globcom's equitable claim for recognition that it has in good faith complied with the formula under the assumption that the continuing obligations as reflected by the overages and deficiencies would be honored. Thus, if a change in the formula is to be made, the change must reflect the accumulated overages and deficiencies or be the result of a compromise solution under which the parties would have voluntarily relinquished their right under the formula in return for other benefits such carriers find compensatory.

Conclusion

In view of the foregoing, RCA Globcom requests that the Commission again find that the formula continues to operate in the public interest.

Respectfully submitted,

RCA GLOBAL COMMUNICATIONS, Inc.

In the Matter of	)	
	)	
International Record Carriers' Scope of Operations in the Continental United States, Including Possible Revisions to the Formula prescribed under Section 222 of the Communications Act	)	Docket No. 19660 RM-690

COMMENTS OF ITT WORLD COMMUNICATIONS INC.

ITT World Communications Inc. (ITT Worldcom) hereby submits its position and responses respecting the issues raised in the investigation instituted by the Commission's Memorandum Opinion and Order (Order), released November 26, 1973, 1/ in the above captioned docket. The overall issue to which the Commission has directed the responses of the parties to this investigation is the question of whether the formula for distribution of unrouted outbound international telegraphic message traffic (formula), currently in use, is unjust, unreasonable, inequitable or not in the public interest.

1/ 43 FCC 2d 1174

Statement of Position

The formula presently in use was prescribed by the Commission on September 27, 1943. At that time the Commission and most, if not all, of the interested carriers recognized that many of its terms and conditions were dictated by exigencies of the period, principally the concurrence of World War II, and a concern that the merged domestic carrier would tend to favor its international operations. While divestment of such international operations had been ordered, the timing of the divestment was uncertain. It is clear therefore that the formula was expected to undergo an early revision, at least by the time the required divestment was completed. Nevertheless, that basic formula is still in use in 1974, over thirty years later.

The continued use of this formula, with its fixed quotas tied to traffic distribution from a base period, over thirty years past, has resulted in an increasingly arbitrary and inequitable distribution of unrouted traffic. This formula does not serve the public interest; it must be revised. ITT Worldcom believes that a formula which encourages rather than discourages competitive enterprise will best serve the public interest and that such a formula, as proposed hereafter, will provide a just, reasonable and equitable distribution of the unrouted

traffic.

In brief, ITT Worldcom urges the Commission to revise the existing formula as follows:

(1) The fixed quotas, encompassing both routed and unrouted traffic, should be replaced by distributive system that allocates, on a current basis, unrouted traffic to each overseas point in direct proportion to the routed traffic carried to each such country by each carrier authorized to render direct telegraph message services to such country.

(2) The accumulated overages and deficiencies, which represent nothing more than a statistical measure of the unworkable nature of the existing quota system, should be eliminated along with the quota system.

(3) Schedule B should be recognized as an anachronistic market sharing agreement which should be terminated.

(4) The designation of certain Western Union Telegraph Company offices, located in international gateway cities, as offices of Western Union International, Inc. should be eliminated.

Formula Background

I. Establishment of quotas

Due to the merger in 1943 of The Western Union Telegraph Company (Western Union) and Postal Telegraph, Inc. (Postal) leaving only a single domestic telegraph carrier, a distributive formula was required for allocating unrouted outbound international telegraph message traffic, which originated with the domestic carrier, among the international record carriers (IRCs).[2/] After the interested IRCs failed to agree upon such a formula, the Commission prescribed the formula which is presently in use, by its Separate Report on Formulas For the Distribution of International Traffic, in Docket No. 6517, decided September 27, 1943 (10 FCC 184).

Pursuant to the 1943 formula, quotas were established for international telegraph message traffic to all international destinations from the U.S. gateway cities (New York, Washington, and San Francisco) and from the U.S. hinterland. Those international destinations were categorized and subdivided into three major Areas and approximately 50 Sub-areas. The Atlantic area was designated Area A, the Latin

---

2/ Such a formula was specifically authorized and required by Section 222(e) of the Communications Act. That Section provides, inter alia, that the interested carriers shall agree upon, or failing agreement, the Commission shall prescribe a "just, reasonable, and equitable formula, in the public interest" for distribution among the international carriers of outbound international telegraphic traffic by the domestic carrier.

American area was designated Area B, and the Pacific area was designated Area C. With one notable exception,[3/] each international carrier serving a particular sub-area was assigned a quota of the total outbound traffic from each of the three principal U.S. gateways to the various sub-areas, and from the U.S. hinterland to the various sub-areas. These quotas were also separated by classification of telegraph message traffic (e.g., "Ordinary" and "Night Letter").

A carrier's quota for each category of traffic and between the U.S. gateways or hinterland and each destination sub-area was fixed as the percentage which that carrier's traffic bore to the total traffic carried by all carriers during the base period. The base period used, which still remains the same, is the calendar year 1942 for all sub-areas where normal operations were being conducted during that year. For those sub-areas where operations were suspended or otherwise abnormal during 1942 (due to the war in progress), the base period was chosen as the most recent twelve month period prior to 1942 when normal operations were occurring. Although the quotas for each carrier are defined in terms of proportionate participation in total traffic in a market, in application, the quotas are expressed as an

---

3/ RCA Global Communications, Inc. elected not to receive a quota from any of its gateways to any of the sub-areas of Areas A and B.

equivalent percentage of gross international tolls. The term "gross international tolls" can be defined, for practical purposes, as to the tolls payable to an IRC for an international message, less the amount normally retained by Western Union for landline haul. Thus a given IRC would be allocated as its quota, a percentage of the gross international tolls for a particular sub-area and category of traffic equal to the percentage established by its base period traffic.

As already noted, RCA Global Communications, Inc. (RCA Globcom) chose not to receive quotas from the U.S. gateways to any of the sub-areas of Areas A and B. That decision on the part of RCA Globcom, while possible fortuitous, was to provide enormously beneficial to that carrier in future operations under the formula, as will be explained hereafter. In those markets where RCA Globcom had chosen not to accept a quota, the quotas of the other carriers were determined as the percentage which each such carrier's traffic bore to the sum of the traffic carried by <u>those carriers receiving quotas</u> for the base period in question.

II. <u>Distribution of traffic</u>

In distributing international traffic among the international carriers, Western Union was required by the terms of the formula to adhere to the following instructions:

(1) Routed traffic was to be turned over to the carrier of

the sender's choice. The sender's "via" was to be honored in all cases.

(2) Unrouted traffic was to be distributed in such a manner as to maintain as nearly as practicable for each carrier having a quota, its proportionate share of gross international tolls pursuant to such quotas.

Since both routed and unrouted traffic received by a carrier is charged against its quotas, the operation of this formula tends to maintain constant market shares, between carriers, at the base period proportions. However, the proviso that all specifically routed traffic be distributed in accordance with the sender's routing has often produced a substantially skewed distribution of unrouted traffic in order to maintain quota balance. A carrier which, because of increased user preference, received routed traffic in excess of its historical share would be denied unrouted traffic of the same category and to the same sub-area, toward the goal of achieving quota balance. Correspondingly, a carrier which received a lower percentage of routed traffic than it had in the base year would have its "deficit" reduced by increased amounts of unrouted traffic.

Another balancing feature was inserted in this formula as a hedge against Western Union favoring its Cables Division prior to divestment. That provision requires that a carrier which receives

routed traffic in excess of its quota for a given sub-area and category of traffic not only be denied any unrouted traffic for that category of traffic but to complete the "balance" must also give up unrouted traffic, to which it would otherwise have been entitled, for other categories of traffic to the same sub-area. Moreover, as an administrative measure the International Quota Bureau (IQB) has interpreted this offset provision such that a carrier which has an "overage" to a particular sub-area from a gateway, for example, will lose unrouted hinterland traffic to that sub-area, to which it would otherwise be entitled, and vice versa.

III. Accumulation of "overages" and "deficiencies"

The IOB has also determined, as administrator of the formula, to accumulate the statistical "overages" and "deficiencies" which are not neutralized in a given year through the balancing provisions of the formula. These accumulated statistical "overages" and "deficiencies" have then been treated as current during any given period of operation under the formula and an effort made again to neutralize them by balancing against current unrouted traffic. For reasons to be explained hereafter, these accumulations of the statistical "overages" and "deficiencies", rather than being reduced in subsequent years, have grown even larger, reaching the point now that there can be no realistic hope of ever neutralizing them through normal operation of the formula.

IV. Complaint of ITT Worldcom

On November 25, 1964, ITT Worldcom filed a Complaint with the Commission showing that this formula, tied as it was to quotas based upon 1943, or earlier, traffic distribution, had ceased to function in the public interest, operated to discourage competitive enterprise, and was causing highly unjust and inequitable distributions of unrouted traffic. The Commission was therefore urged to exert its continuing jurisdiction over the formula and to prescribe a new formula which would conform to the statutory mandate that the formula be just, reasonable and equitable and in the public interest.

On December 13, 1972 the Commission adopted a Notice of Inquiry and Proposed Rulemaking, in Docket No. 19660, (38 FCC 2d 543), wherein it proposed to institute a general inquiry of several related matters pertaining to the domestic handling of international record traffic, including the ITT Worldcom complaint against this formula. On May 25, 1973, the Chief of the Common Carrier Bureau requested all interested parties to update their 1964 comments to ITT Worldcom's Formula Complaint. Finally, by its Order, released November 26, 1973 the Commission explicitly set the formula for investigation.

In January of 1974, several carriers which were party to the investigation sought a delay in the proceeding for the purpose of

devising and conducting a study of unrouted traffic presently received by each carrier. After discussions among the participating carriers and failure to reach agreement as to the necessity of such a study, the Commission was asked to resolve the matter. By its Memorandum Opinion and Order, released June 10, 1974, the Commission determined that a traffic study should be conducted, but parallel to the carrier responses so as not to further delay the investigation.

Support For Position

I. The present formula is unjust, unreasonable, inequitable, not in the public interest and must be substantially revised.

A. The quotas prescribed in the 1943 formula are obsolete and conceptually unsound.

A formula for the distribution of unrouted international telegraph message traffic was prescribed by the Commission in September of 1943. The distribution of traffic pursuant to that formula was based on quotas assigned each international record carrier. Those quotas, which include all traffic transferred by Western Union (routed and unrouted) and all traffic filed directly with the international record carriers, were derived from the proportional amount of total outbound traffic which each carrier had received for a given destination and category of traffic during a base period year, which was 1942, or earlier. Almost 31 years later, in July 1974 that same formula is still being used and the quotas based on 1942, or earlier, relative traffic distributions are still in effect. For so dynamic and competitive a field as international record communications, the mere use over almost a third of a century of a formula in which distribution is keyed to traffic statistics from a single year at the beginning of that period provides a clear and pressing argument for the immediate replacement of this formula with one established to serve the

present and prospective requisites of international record communications and the public interest.

An even more serious flaw in the 1943 formula lies in the conceptual manner in which the quotas are applied. The quotas were established based on each carrier's proportionate share of the total outbound traffic from a U.S. origin (hinterland or gateway) to a given destination sub-area. When these quotas were used in the distributive formula, they were again applied to all traffic received by a given carrier (i.e., routed and unrouted traffic) and with balancing provisions in the formula which attempt to fulfill each carrier's quota. This application of quotas in the distributive formula to all traffic rather than to only unrouted traffic (the only traffic for which a distributive formula is actually necessary) will to the extent quotas can be met, require that relative traffic distribution for each succeeding year duplicate the base period proportionate distribution. Thus, rather than being a means for distributing unrouted traffic in accordance with some historical pattern, the formula became instead a device for attempted[4/] maintenance of each carrier's market share at the same proportionate level as its share in the base period.

4/ The attempt was not entirely successful because each carrier was permitted to keep all routed traffic sent to it regardless of quotas, and thus could exceed its base period traffic level with only routed traffic.

A formula for distributing unrouted international telegraph message traffic which operates to preserve the market shares of the international record carriers from a base period of 1942 or earlier cannot be found to serve the public interest in 1974. The existing formula with its archaic quotas should be given a long overdue retirement and replaced by a formula which is keyed to present market conditions, has provision for maintaining currency with a changing market and which encourages, not stifles, competitive enterprise.

B. The quota balancing provisions of the present formula are inequitable and operate to frustrate the public interest and Commission policy

Because the quotas for the 1943 formula encompassed both routed and unrouted traffic, and because the formula provided for no discretion with respect to the distribution of specifically routed traffic (it was always to be distributed to the carrier chosen by the sender), provisions were built into the formula to shift unrouted traffic in such a manner as to offset increases or decreases in the proportionate amount of routed traffic which a given carrier received, and thus to maintain its total traffic at or close to its quota. This balancing mechanism basically took place in two distinct steps. Initially, a carrier was allocated unrouted traffic for a given category of traffic [5/] in such amount

---

5/ Throughout this discussion, unless the contrary is specifically stated, reference to traffic or quotas for a particular category of traffic implies a traffic movement from a specific U.S. origin(hinterland or gateway) to a particular destination sub-area.

as, when added to the total routed traffic (i.e. direct pickups as well as Western Union transfers) received by that carrier for the same category of traffic, would equal its quota for that category of traffic. As can be seen, a carrier which improved its services to the user, thereby increasing its share of specifically routed traffic through increasing customer loyalty to its service, would find its apparent reward for improved service largely nullified by the operation of the formula. The balancing provisions of the formula would take away unrouted traffic, on a one for one basis, up to the level of a carrier's quota, for increases in routed traffic. Similarly, a carrier whose quality of service deteriorated would apparently have little reason to take remedial action, since the formula would provide increased unrouted traffic to bring that carrier back near its quota level.

That there have not been substantial degradations of service during the life of this formula must be attributed largely to the propensity of most carriers to place a value on customer satisfaction and good will beyond the mere dollars and cents involved, and the expectation that this formula would soon be revised to eliminate these disincentives. If this formula is permitted to remain in effect for very much longer, however, rising costs for telegraph service (possibly higher landline divisions, general inflation, etc.) may well swing the balance away from a primary disposition to maintain customer

good will, so that, with the disincentives of the formula, there exists little motivation for maintaining service quality.

A secondary balancing provision operates when a carrier receives routed traffic for a particular category of traffic which exceeds that carrier's quota for that category of traffic. Then, the formula requires that unrouted traffic from that carrier's quota for another category of traffic, but for the same U.S. origin and destination sub-area, be taken away from that carrier and given to carriers deficient in quota for the first category of traffic. This provision was apparently included in the formula solely as a hedge against the possibility that Western Union might tend to favor its Cables Division (whose divestment was required but not yet effected), as by influencing customers to route messages via its Cables Division. Whether or not there actually existed a need in 1943 for this proviso, such a need of requirement certainly ended in 1962 when divestment of its Cables Division was finally accomplished by Western Union.

Because quota imbalances were not always corrected by offsets between categories of traffic, the IQB has "interpreted" the formula to extend the quota offset concept so as to offset quota imbalances against unrouted traffic from other domestic points of origin.[6/] Whereas the

---

6/ This "interpretation" was opposed by ITT Worldcom, a position it has continued to maintain.

formula provides for quota balancing by shifting unrouted traffic between categories for the same traffic routing, the IQB interpretation expanded this concept to permit unrouted traffic received at a gateway to be used to offset quota imbalances in hinterland traffic received by a particular carrier for the same destination sub-area, and vice versa.

These quota balancing provisions just described constantly seek to maintain or restore the same relative traffic distribution among the IRCs as existed in the base period year (1942 or earlier). Such a concept of preserving fixed market shares, ad infinitum, is both contrary to the Commission's policies encouraging competitive enterprise and is demonstrably not in the public interest which benefits from healthy competition.

Many factors undoubtedly influence the nature and quality of communications services provided to users, but one very important factor is the belief or expectation that a given carrier's relative share of the traffic in a market will be rather closely related to the quality of its service in that market - i.e., improvements in service quality generally produce increases in market share. Use of the existing formula, however, tends to frustrate this expectation, through its rather artificial redistribution of traffic. Any traffic gain from improved service, or loss from poor quality service, will tend to be

neutralized by operation of the formula. Unrouted traffic will be reduced for a carrier gaining other traffic and increased for a carrier losing other traffic.

Fortunately, the international record carriers have not succumbed to the formula disincentives and the formula era has, by and large, been marked by healthy and often vigorous competition among the IRCs, despite these disincentives to such competition. As earlier explained, this fact can be largely attributed to the overriding disposition of most carriers to provide high quality service in the interest of favorable customer relations, particularly since many of those telegraph customers will also be customers for other services offered by a carrier. In addition, because of limitations in the amount of unrouted traffic available, the balancing provisions of the formula have not been entirely successful in either negating gains or compensating for losses from the base period traffic proportions. In some instances, too, a carrier may attempt to secure routed traffic based on the probability that any return message would also be routed via it; this factor would, however, also apply to any unrouted traffic actually received.

Although competitive enterprise seems to have survived the disincentives of the formula, it is quite within the bounds of reason to believe that the public might well have been even better served in a competitive environment free of these disincentives. Equally important,

while the competitive spirit may have remained intact, the fruits of such competition under this formula are gross distortions and serious inequities in the distribution of unrouted traffic, as described more fully in the next section. Relative market shares have often changed dramatically since the formula's inception in 1943, due to the existence of this competitive spirit. Yet the formula, rather than reflecting these changed market conditions, continues, after over thirty years, its efforts to restore the same relative traffic distributions existing in the base period year of 1942 or earlier. The net result of course, is that those carriers who have served the public well and improved their market share are in effect penalized for their successes by being largely denied any unrouted traffic.

C. Traffic distributions based on statistical "overages" and "deficiencies" accumulated from year to year result in serious inequities and a wholly arbitrary allocation of unrouted traffic between carriers

The failure of the 1943 formula to acheive its apparent goal of maintaining traffic for each carrier proportionally constant at the base period can be principally attributed to the following factors. First, each carrier was permitted under the formula to keep all traffic specifically routed to it, regardless of quota; and second, competitive enterprise among the carrier's, while perhaps somewhat stifled by

the formula, was certainly not eliminated. As a result of a continuing competitive spirit, various carriers in various markets attempted, often successfully, to improve their relative market shares, in spite of the disincentives to such which were built into the formula. These successful market improvement efforts caused the correlative effects of increasing the amount of routed traffic which must be offset by shifts in unrouted traffic towards the goal of quota balance, and at the same time reducing the total pool of unrouted traffic available for such balancing offsets (i.e., much of the traffic gain by specific carriers resulted from conversion of formerly unrouted traffic to specifically routed traffic). It did not take long for instances to occur where, even with all of the balancing provisions built into the formula, a carrier would accrue a sufficient excess of specifically routed traffic that an offsetting adjustment for quota balancing simply could not be made because of lack of comparable unrouted traffic in sufficient quantity. A quota imbalance was then created for which no neutralizing means existed under the formula.

Responding to the dilemma, the IQB produced yet another administrative "interpretation" of the formula. A quota imbalance (generally called an "overage" where traffic received exceeds quota, and a "deficiency" where less traffic is received than quota), which could not be neutralized in the year of occurrence would be carried over

to the next year in an attempt to neutralize it with unrouted traffic from the new year. Whatever the merit or lack thereof in this effort to thwart the will of the market place in order to maintain the base period market shares, the particular means adopted to this end must be judged a colossal failure. Moreover, this result was, or should have been, fairly expectable.

The root cause of the developing overages and deficiencies, as already explained, lay in traffic shifts resulting from competition between carriers and a shrinking pool of unrouted traffic with which to offset those shifts. Therefore the Bureau's decision to carry over these imbalances into a new year must have been predicated on the assumption, perhaps only a hope, that the future would bring either an increase in the unrouted traffic pool or a natural reversal of the shifts in routed traffic which had been occurring. In retrospect, at least, the former was clearly unrealistic. While perhaps experiencing some leveling off, there has been no reversal of the trend of unrouted traffic to decrease as a percentage of total traffic. Secondly, the traffic shifts contributing to these imbalances largely resulted from inroads made by carriers having a minority position in a market, into the traffic share of heavily dominant carriers. Short of unlawful predatory action on the part of such dominant carrier, there would be little reason to expect these shifts to be reversed. Nevertheless, these carry-overs were continued

and the rest is history.[7/] As these imbalances were carried over year after year, seldom was there any reduction, but instead they frequently grew larger as new imbalances developed in a current year had to be added onto those carried over from previous years.

Finally, with the accumulated quota imbalances growing ever larger, what little remaining rationality existed in the distribution mechanism of the formula was ~~effectively~~ eviscerated in an apparent last ditch effort, on the part of the IOB, to restore an orderly traffic distribution. In all markets where a carried forward (hereafter "cumulative") quota imbalance existed (which were becoming increasingly numerous), unrouted traffic was thereafter to be distributed in accordance with a net imbalance between hinterland and gateways for traffic to a given sub-area. Under this concept, a carrier, for example, with a cumulative overage from the hinterland to a particular sub-area (i.e., well over its quota to that sub-area) may still be given unrouted traffic to that sub-area if its has a gateway deficiency to that sub-area greater than its hinterland overage, a net deficiency. Of course, it will also be receiving unrouted traffic from the gateway. Correspondingly, the carrier or carriers with a gateway overage to that same sub-area and a hinterland deficiency, netting to an overage, will receive no unrouted traffic to that sub-area from either hinterland or gateway. Thus

---

7/ See discussion under Specific Response to Commission Issue 2, Appendix Issue (2), p. 1-8.

no longer is traffic distribution even keyed to maintenance of some historic traffic pattern, but rather the formula administration has evolved into a distribution based solely on a series of statistical abstractions that, for most sub-areas, allocates all unrouted traffic to a single carrier; moreover, those statistical abstractions, even in their most meaningful context evince little more than the wholly unworkable concept underlying this formula. A more arbitrary approach to unrouted traffic distribution can hardly be imagined. And after thirty years of attempting unsuccessfully to make this formula workable, it is manifest that its further use can only result in increasingly arbitrary and inequitable distributions of traffic.

To sum up, for a carrier which exercises the "poor judgment" to offer a superior service which results in increased patronage for its specific service, an offsetting reduction in the unrouted traffic which it would otherwise receive, is excised by the balancing provisions of the formula. Moreover, with the existing administration of the formula, such a carrier will not only lose unrouted traffic in the year in which a traffic gain is made, but also for every year thereafter unless and until the newly acquired traffic is either lost or given up to another carrier. And the carrier that enjoys increasing traffic for more than a few years in succession will likely find all unrouted traffic taken away, with virtually no likelihood of regaining any of it. The inequity of such a

system, which severely penalizes superior service by, and customer loyalty to a carrier, should not require further elaboration.

D. Schedule B of the formula is an anachronistic market sharing device inconsistent with the public interest and should be abolished

Schedule B of the formula provides for the transfer of approximately 60% of the messages in WUI's quota for sub-areas of Area A to be transferred to RCA Globcom in accordance with a special agreement between RCA and WUI which was incorporated into the formula. This agreement represents, more or less, a novation of a contract existing between RCA and Western Union (whose Cables Division became WUI) prior to the time the formula came into being, which provided for certain reciprocal exchanges of traffic between the two companies. Although ITT Worldcom has no direct interest in the traffic transferred pursuant to Schedule B, it believes that the public interest is generally ill served by market sharing agreements such as this, and absent strong countervailing considerations, the Commission should require cancellation of this agreement

It appears that the only basis for the agreement being entered into in 1943 derived from the unexpired traffic exchange agreement between RCA and Western Union prior to the formula. Certainly the use of Schedule B over the last thirty years has to be considered good

and sufficient consideration in satisfaction of whatever contractural obligation may have existed at the inception of the agreement in 1943. Schedule B thus encompasses an agreement for the allocation of market shares which negates competitive enterprise and is therefore contrary to the public interest and for which there exists no apparent offsetting justification. The Commission is therefore urged to exclude Schedule B or any like private, market-sharing agreement from the formula which it hereafter prescribes.

E. The designation of all international messages filed in certain offices of the Western Union Telegraph Company located in gateway cities, as specifically routed via Western Union International constitutes an unfair competitive advantage for WUI and should be ended.

In its decision approving the divestment by Western Union of its Cables Division, to become the independent carrier, WUI, the Commission determined that WUI should be given all traffic filed at Western Union offices south of 60th Street in Manhattan and at two Western Union offices in Washington and two such offices in San Francisco, as specifically routed via WUI (30 F.C.C. 323, 1961). This decision, which had the effect of permitting WUI to use those Western Union offices as its own gateway pickup facilities and thus be spared the burden of opening its own offices to compete with the other IRCs, was largely predicated on the Commission's belief that WUI required this advantage at the time to be competitively viable.

Over thirteen years have now passed since WUI first entered the international record communications arena. Whatever may have been its competitive limitations in 1961, WUI today is clearly a viable, aggressive competitor for the other IRCs. Consequently, its continued use of Western Union gateway offices as its own, results in an unfair and unnecessary competitive advantage vis a vis other IRCs. Not only does WUI avoid much of the expense of maintaining its own offices, but by receiving all international messages received at those Western Union gateway offices, WUI fosters confusion on the part of the public and some Western Union employees, as to the appropriate means of routing, or not routing, traffic via a particular international carrier.

ITT Worldcom submits that WUI has, in its 13 year existence become a strong and viable competitor in the international record field, and therefore that its special status should be ended and that it be required to open its own gateway offices and compete on equal terms with other international record carriers.

II. Attribution to the "accumulated overages and deficiencies" of any continuing or vested interest would require a strained and illogical construction of the 1943 formula and be completely contrary to the public interest.

Given the conceptual flaws leading to, and the arbitrary and inequitable distributions of traffic flowing from, the continuously accumulating quota imbalances in the existing formula, it is axiomatic in ITT Worldcom's view, that the formula prescribed by the Commission as a result of this proceeding will be designed to avoid any such continuing imbalances. As an example, the formula proposed hereafter by ITT Worldcom -- distribution of unrouted traffic in proportion to each carrier's routed traffic -- would provide for quotas applicable only to unrouted traffic and defined in such a manner that all unrouted traffic is precisely allocated with no possible shortfall or excess of the traffic "due" to a particular carrier.

Because of the near astronomical imbalances which today characterize the existing formula and the resulting badly skewed distributions of unrouted traffic which have evolved from the IQB's effort to reduce those imbalances, many instances exist where one or another carrier is heavily favored by the traffic distribution to various sub-areas. Some of these carriers, purely as a matter of self interest, can be expected to challenge any changes in the formula which affect their favored traffic distribution. Facing the strong likelihood that the Commission will

prescribe a new formula which abandons most, if not all, of the archaic and inequitable distributive aspects of the old formula, those carriers can be expected to urge as a fallback position, that a continuing or vested interest in those statistical imbalances inures to their benefit, which must either be "liquidated" or carried forward to the new formula. This hypothesis is patently absurd. These accumulated imbalances do not represent gained or lost traffic for which a liability or a chose in action is created by the formula. Rather they are nothing more than a statistical representation of the failure of a concept underlying the 1943 formula, that of maintaining proportional market shares constant over a long period of time for a dynamic, competitive industry. As such a historical measure of the unworkable nature of that formula, these statistical abstractions should, like all other out-moded characteristics of that formula, be simply relegated to history, upon the prescription of a new formula by the Commission.

In order to establish any credibility for a thesis that the accumulated quota imbalances, which now characterize the formula, represent vested interests for the carriers to which they are attributed, it would be necessary to show that the Commission, in prescribing the formula in 1943, intended that the quotas therein established be, not merely a goal toward which the unrouted traffic would be distributed in such a manner as to approach as nearly and often as possible, but rather would

operate as an absolute guarantee to each carrier of receiving its quota share of traffic at all times and under all conditions. At this point, suffice it to say that, aside from the fact that a prescription of fixed market shares is the antithesis of competitive enterprise, which the Commission has long championed, such an argument is belied by both the actual content of the formula and by the Commission's statements and actions in prescribing the formula.

It is significant that the formula establishes quotas based upon total traffic received by a carrier but only permits unrouted traffic to be shifted in pursuit of those quotas. When all specifically routed traffic was to be given the carrier so chosen, it cannot have been unexpected that on some occasions the specifically routed traffic might exceed quota. The very existence of the balancing provisions suggests the same likelihood. However, if the Commission had intended that the formula operate to fix absolutely and interminably each carrier's proportionate market share, it would not likely have chosen a method which could be foreseen to be so highly inefficient, as opposed to simply shifting all traffic as required to maintain the fixed shares; and given such an intent, the Commission could not be expected to have held any compunction toward taking away specifically routed traffic from any particular carrier. That this was not the Commission's intent is further illustrated by the long period which the formula has been in use with ever increasing quota im-

balances. If the Commission had intended the maintenance of proportionate market shares at the base period level, it would never have permitted these proportions to reach such a severe imbalance.

Moreover, in its order prescribing the formula, the Commission evinced some concern that the public might lose some of the benefits which competition has historically brought, but concluded that "[while] overall competition may be lessened as a result of the organized distribution of traffic, ...we intend to maintain careful surveillance over the operations of the international telegraph carriers to assure that progress in providing efficient and economical service in the field will continue" (10 F.C.C. 195, emphasis added). If a fixed market share had been guaranteed each carrier by operation of the formula, with legal rights and obligations attaching to such shares, then competition, rather than being merely lessened as concerned the Commission, would instead have been completely eliminated. In addition, given the Commission's expressed intent to closely monitor the formula, it would defy credulity to believe that the Commission could dispassionately watch for over thirty years the ever mounting quota imbalances, without giving notice to the various carriers who were in overage positions that they must be prepared to "give back" all extra traffic accrued since 1943, if such had been the Commission's intent.

It is worthy of note also, that in rate proceedings over the years it was never suggested that a carrier's "creditor" or "debtor" status, as the case may be, in relationship to formula imbalances, was a factor for consideration in determining revenue requirements. And such imbalances were never recorded in carrier accounting systems as a deferred receivable or contingent liability.

A construction of the existing formula which ascribed a legal or vested interest in the accumulated quota imbalances would, as shown hereafter, severely frustrate the public interest. A carrier which, even inadvertently, had provided a better service and attracted additional traffic would have acted at its peril, incurring a legal liability to make whole other carriers who had attracted proportionally less traffic; hence an immense disincentive would exist against any form of competitive enterprise - the carrier would be in a position of nothing to gain, all to lose. Secondly, the large imbalances which have accumulated since 1943 cannot realistically be "liquidated." An overage carrier could not simply give back traffic to a deficiency carrier; and a lump sum settlement, even assuming legitimacy, would at a minimum require an exhaustive analysis to determine net amounts for every occurrence of a quota overage. Additionally, any attempt to engraft the existing quota imbalances onto a new formula would, at best, result in an

indefinite continuation of the wholly arbitrary distribution of unrouted traffic, which those imbalances have already produced in the existing formula; conceivably such an engrafting would irreversibly bias a new formula away from a just, reasonable and equitable distribution of traffic.

Finally, it is important to recognize that both the accumulated imbalances themselves and unknown biases contained in these statistics owe their existence largely to the fact that, contrary to universal expectations, the formula did not undergo revision within a few years after its inception. Two of the formula provisions are especially notable in this regard. The quota balancing offset placed in the formula to discourage Western Union from favoring its Cables Division, and which largely accounts for the existence of the "overage" and "deficiency" concept, was expected to be eliminated as soon as divestment occurred. Of course, divestment was expected to take place shortly after the merger in 1943. The other provision, the absence of quotas for RCA Globcom from its gateways to Areas A and B, which eliminates RCA Globcom traffic in the gateways from being counted, one way or the other, in determining overage and deficiency positions and thus introduces an unknown bias into those statistics, was similarly expected to be revised or eliminated within a short period of time, as experience was gained under the formula and competitive positions became somewhat more balanced. Were the Commission to now create vested interests from these

statistical imbalances, it would not only dramatically multiply the already existing inequities in this formula, but would also amount to a repudiation of the expectations of the Commission and the carriers in 1943 that this formula would be changed as soon as the wartime conditions had stabilized, or as soon as industry conditions changed.

For both the conceptual reasons and practical considerations, the Commission is respectfully urged to find that the use of these statistics to establish any sort of vested interest or handicap in the future distribution of outbound unrouted traffic would be unjust, unreasonable, inequitable and contrary to the public interest.

III. The existing quota system should be replaced by a formula that allocates unrouted international telegraph message service in proportion to routed traffic received by each carrier.

In its 1964 Complaint, ITT Worldcom urged that the existing formula be replaced by one which eliminates "quotas" as such and distributes unrouted traffic equally among all carriers having authority to directly serve a given international destination. While this basis for distributing unrouted traffic has the virtue of simplicity of administration, allocation of unrouted traffic in proportion to specifically routed traffic as recently urged by TRT Telecommunications Corporation (TRT) may provide a more logical basis for distributing the unrouted traffic and appears more in keeping with the Commission's emphasis on the encouragement of competition among carriers. This approach, distributing unrouted in proportion to routed traffic, would largely reverse the competitive disincentives of the old formula. Such an allocation of unrouted traffic would give due recognition to the competitive results achieved by the carriers and would promote competition relating to the quality of services. To the extent that customers of telegraph message services 'vote' for a given carrier by using its services, that carrier would benefit from an appropriate share of the revenues for routed and unrouted traffic.

The TRT proposal, as understood by ITT Worldcom, would allocate unrouted traffic in proportion to routed traffic by carrier and by destination country - i.e., unrouted outbound traffic to a given country would be distributed to the carriers serving that country in proportion to the routed traffic which they each carried to the given country. TRT has also urged that routed traffic from the gateway cities should be excluded from the totals used to allocate unrouted traffic, in the belief that inclusion of the gateway routed traffic would unfairly bias the unrouted traffic distribution against smaller carriers, such as TRT, who lack the "favored gateway status" of the larger international carriers.

ITT Worldcom supports the TRT proposal that the unrouted traffic allocation be made in proportion to routed traffic, and urges that such distribution ~~be on a country-by~~-country basis among carriers authorized to provide direct services to such countries. Distribution by country should assure that the competitive stimulus and public benefits upon which this allocation is premised are available and applicable to all markets and users. To do otherwise, i.e., distribute <u>total</u> unrouted traffic to <u>all</u> foreign destinations in proportion to the total routed traffic to all foreign destinations would create a strong incentive for a carrier to

concentrate traffic development efforts and corresponding service improvements in a few high density markets which could be expected to produce a volume of routed traffic equal to or greater than that obtained by spreading traffic developmental efforts over the whole spectrum of markets and users, and at less total expenditure of resources. This would appear to result in undue preference to the high density markets and unreasonable prejudice against the smaller markets. In addition, allocations on an overall basis would likely result in a skewed traffic distribution, not unlike that presently existing, by operation of the IQB. Rather than attempting to apportion unrouted traffic for a given country among carriers authorized to serve that country, it might well, as a matter of administrative convenience, assign all traffic for a country to one carrier, all traffic for another country to a second carrier, and so on, just being sure that, overall, each carrier received its proportionate amount of total traffic. Given that the cost to revenue ratio for a message will vary somewhat between countries and that traffic returns are more likely from some countries than others, such an arbitrary allocation methodology would carry forward much of the inequity existing in the present formula.

While no allocative system may be said to guarantee absolute equality of treatment for all users and all markets, ITT Worldcom suggests that a proportional allocation of unrouted to routed traffic at the individual market level is considerably more likely to provide such equality than is

one which practically invites a carrier to concentrate its resources in a few large, dense markets or the IQB to administratively slip back to a distribution containing many of the inequities of the existing formula.

The proposal by TRT that gateway routed traffic should be excluded from the routed traffic total for purposes of allocating unrouted traffic should not be adopted. Such an exclusion would produce at least as great a bias against the IRCs who have significant operations in the gateways as is allegedly created in favor of those carriers by the inclusion of the gateway routed traffic in the total. In the interest of compromise, however, ITT Worldcom would be prepared to accept a modification of the TRT position to exclude self generated traffic (i.e., traffic filed at the IRC offices) in the gateways (including TRT gateways), but not routed traffic from Western Union. With this modification unrouted traffic to each destination country would be allocated between carriers in proportion to all routed traffic filed with Western Union for each such destination.

Turning to the administrative aspects of the proposed formula, the allocation of unrouted traffic in proportion to routed traffic probably cannot be done on a "real time" basis. Therefore, some historical period of routed traffic must serve as a basis for allocating present unrouted traffic. However, to avoid the gross distortions of the competitive

realities of the market place, as has been observed through the use of the existing formula, and to assure the competitive stimulus which should characterize the new formula, it is essential that the historical "base" for unrouted traffic distribution be periodically updated to keep the unrouted traffic distribution in step with changing market conditions. To provide for this necessary updating and to also allow some time lag for the administrative computation of allocation percentages, ITT Worldcom suggests that new unrouted traffic allocations be established every six months beginning January 1 and July 1 of each year, and using as a base period the parallel six month period for the previous calendar year. Thus, for example, the unrouted traffic to a given destination for the period January - June 1975 would be allocated to the various carriers authorized to directly serve that destination in direct proportion to the percentage of routed traffic which each carrier received during the period January - June 1974. As can be seen, this methodology not only keeps the allocation of unrouted traffic closely responsive to changes in routed traffic but also provides a reasonable period (six months) between the closing of a given base period and the start of the period during which that data will be used for unrouted traffic allocation, so that data compilation, computation of allocation percentages for each carrier, reproduction, and other necessary administrative tasks can be carried out.

SUMMARY

That the Commission prescribed a formula in 1943 which effectively carved out market shares and essentially eliminated competitive stimulus to new traffic development can be attributed largely to uncertainties associated with the concurrence of World War II. Because there was no way of knowing at that time just what course the war might take or what communications exigencies might be brought to the fore, the Commission seemingly adopted the position that the status quo should not be disturbed, but that an early revision was likely because of changed conditions following the ending of the war. That this was the Commission's view is supported by its opinion approving the 1943 formula (10 FCC 184) where it said, at 196:

"We have considered a proposal made by RCAC, in which the other carriers do not concur, that the basic formula set forth in exhibit 306A should be adjusted in the future to reflect future changes in the relative amounts of in-bound overseas traffic handled by each of the carriers...The proposal appears to be directed principally to traffic with occupied Europe and Pacific areas controlled by the enemy, since future over-all increases in such traffic are most likely, as communications with these areas is again established. In essence, then the RCAC proposal seeks to determine now the policy and principles which will be applied at some time in the future under a changed factual situation, the nature of which cannot now be determined. International communications conditions are unsettled during this global war. As the war progresses, the concentration of communications will shift from area to area. We cannot undertake to determine now the desirability of an adjustment in the distribution formula which by its nature cannot take effect until a time when the entire world communications picture may be profoundly altered. If the provisions already embodied in the formula for distribution of reestablished traffic are not adequate to deal with the problem when it arises, we

will review the matter in the light of all the facts, which are now unknown and will then be available. The end of the war may require a major revision of the formula which we have approved, and we do not desire to prejudge the issues which may then arise, by premature action at this time."

The Commission's action in 1943, in prescribing a formula which seemed to establish, as a goal, the maintenance of fixed market shares among the international record carriers and the consequent elimination of competitive effort, even though expressing concern about lessened competition, occured because:

(1) there was general agreement among the affected carriers on the major provisions of the formula;

(2) the country, and its communications facilities were involved in a period of great national stress; and

(3) the Commission and the carriers expected an early revision of the formula to reflect changed and changing conditions.

Even if the Commission had concluded, as a matter of policy in 1943, that a formula which so stifled competitive effort was required to satisfy the statutory criteria that the formula be just, reasonable, equitable and in the public interest, it had clearly become of the opposite view in 1961 when it approved the divestment by Western Union of its Cables Division, which was to become WUI. In its opinion there (30 FCC 323, 382) the Commission said:

"WU International will have its interest in certainty and lack of argument satisfied. Its fears that its share of traffic will be adversely affected by divestment will be allayed and its starting revenue position protected. What will happen in the future will, of course, depend on the competitive efforts and effectiveness of the

carriers, That, however, will be the natural and proper results of operating in a competitive society". (emphasis added)

See also the Commission's endorsement, in 1955, of competition among the international radio-telegraph carriers in Mackay Radio and Telegraph Co. 19 FCC 1321, 1349-50 (1955) (Conclusion of Three Circuits Case). And even a casual observer of the Commission's actions in recent years would have to conclude that the Commission's current policy strongly favors competitive enterprise among various communications carriers. See for example, the Commission's opinions in American Telephone and Telegraph Co. (TAT-4), 37 FCC 1151 (1964); Use of the Carterphone Device in Message Toll Telephone Service, 13 FCC 2d 420 (1968); Specialized Common Carrier Services Inquiry, 29 FCC 2d 870 (1971); Establishment of Domestic Communications-Satellite Facilities by Non-governmental Entities, 35 FCC 2d 844 (1972); Tropical Radio Telegraph Co. (Service to Italy), 35 FCC 2d 950 (1972).

Nevertheless, a formula for distributing unrouted international telegraph message traffic, prescribed in 1943, which was clearly intended be revised within a few years remains in use today. Moreover, the quota system established by that formula is completely contrary to the Commission's regulatory policies toward the encouragement of competitive enterprise, and produces severe inequities in the distribution of traffic among the participating carriers. That formula must be excised

as a control of international record communications market shares.

The Commission is urged to prescribe a new formula which provides reasonable incentives for competitive enterprise, is protected against stagnation due to the use of out of date bases for distributing traffic, is unencumbered by any ghosts from the past, and is otherwise just, reasonable, equitable and in the public interest. ITT Worldcom suggests that these goals will be achieved by a simple formula which distributes unrouted traffic to each overseas point to carriers authorized to provide direct services to such points, in proportion to the outbound routed traffic handled by each such carrier, based on traffic statistics used for determining allocations which are updated semi-annually.

Washington, D. C. 20554

In the Matter of	)	
	)	
International Record Carriers' Scope of Operations in the Continental United States, Including Possible Revisions to the Formula prescribed under Section 222 of the Communications Act.	)	Docket No. 19660

To: The Commission

COMMENTS OF WESTERN UNION INTERNATIONAL, INC.

Western Union International, Inc. (WUI) hereby submits its Comments and Memorandum of Law in response to the Commission's Memorandum, Opinion and Order released June 10, 1974, which requested the parties to this proceeding to comment upon the proposed revisions to the International Formula for distribution of outbound international cablegrams filed with the domestic telegraph carrier.

The present proceeding is an important and far reaching investigation. It will affect the distribution and handling of approximately four million messages per year, and potentially could affect the viability and economic well being of all of the international record carriers for years to come. It is of vital importance therefore that all proposed revisions to the International Formula be examined with the greatest of care. Changes made in the Formula could have more extensive and long-lasting effects upon these carriers than any of the

Commission's recent actions in the international field.

The principal factor to be considered in connection with the proposed revisions is that the Formula has operated successfully for many years. Having withstood the test of time, it should not be changed without a strong showing that the public interest is being significantly harmed by its current operation. In order to make its statutorily required finding that the Formula has now become "unjust, unreasonable or inequitable, or not in the public interest (§222(e)(3)", the Commission must have positive proof of significant, lasting damage to the public interest.

No carrier proposing revisions has come forward with the necessary proof that the public is being hurt. All carriers operating under the Formula are successfully and efficiently transmitting the traffic: the Western Union Telegraph Company (WUTelCo)procedures for distributing unrouted messages are operating satisfactorily and without undue delay in most instances; and the staff of the International Quota Bureau are impartial, experienced, and skilled in the administration of the Formula. In the face of all the indications that it is operating smoothly, the Commission should be hesitant indeed before tinkering with it.

The only substantive allegation that the Formula is defective relates to the fact that "overages" and "deficiencies" have built up over the years to paper

sums of many millions of dollars. However, this is an illusory problem. These paper amounts derive from the fact that the Formula requires that each carrier should receive a certain percentage (based on 1942 traffic distributions) of the total traffic to each sub-area, including routed and unrouted transfer traffic, and carrier pickups. Since all routings by subscribers must be honored, in order to preserve the right of choice, unrouted traffic subject to distribution pursuant to formula is sometimes insufficient in some sub-areas to enable each carrier to obtain its prescribed quota, resulting in "deficiencies" for those sub-areas.

The dollar amounts of the "deficiencies" have no real significance, except that, taken sub-area by sub-area, they provide an indication to the International Quota Bureau of which carrier should be receiving unrouted traffic in order to make up its quota. The "overages" are simply the arithmetical converse of the "deficiencies". Neither represents money owed by one carrier to another but merely reflect the operation of two of the features of the Formula, the "quota", and the requirement of respecting the customer's routing. Consquently, the grand totals of net "overages" or "deficiencies" are meaningless. Certainly they do not justify interfering with an operation that has proved satisfactory over the years.

The Commission must consider the deleterious effects that the proposed changes may have on the industry.

Each carrier receiving traffic pursuant to the Formula has invested many millions of dollars in equipment designed to process and transmit international cables. Expensive, sophisticated computers and other electronic equipment designed to handle this traffic has been installed. The long-range decisions to purchase this equipment were based upon the expectation of certain minimum amounts of traffic, which in turn depend upon the assumption that no drastic changes would be made in the distribution of traffic pursuant to the Formula. These plant and transmission facilities are designed to handle the volume of traffic resulting from the present Formula distribution. No abrupt change in this distribution could be made over the short term without resulting in the carriers burdened by such a change having excess capacity standing idle. Each carrier involved is entitled to amortize its investment in this equipment over its expected lifespan, and thus must receive the traffic that formed the basis of the decision to make such investments.

As WUI has pointed out in its earlier comments, and as the Commission has recognized in its Order released June 10, 1974, the statistical information necessary to determine the effects of any proposed change is lacking, and will not be available until WUTelCo completes its study. Accordingly, no analysis of these proposals is appropriate at this time

The Commission's Memorandum Opinion and Order herein, released November 26, 1973, instituting this investigation into the International Formula, does not specify the procedure which the Commission intends to follow, beyond the present round of statements of fact and memoranda of law, and responses thereto. Since the WUTelCo study of international transfer traffic will not be completed until after responses to the present round of pleadings have been filed, it will be necessary for the Commission to order further procedural steps in order to resolve the questions raised in this docket. Before the Commission can issue any order prescribing any change in the International Formula, it is required by statute to hold a full hearing into all aspects of the question.

Section 222(e)(3) reads as follows:

> "Whenever, upon a complaint or upon its own initiative, and after a full hearing, the Commission finds that any such distribution of telegraph traffic among telegraph carriers, or any such division of charges for such traffic, which is being made, or which is proposed to be made, is or will be unjust, unreasonable, or inequitable, or not in the public interest, the

> Commission shall by order prescribe the distribution of such telegraph traffic, or the division of charges therefor, which will be just, reasonable, equitable, and in the public interest, and will be, so far as is consistent with the public interest, in accordance with the existing contractual rights of the carriers". (Emphasis supplied).

The "full hearing" requirements of Section 222(e)(3) cannot be satisfied by any procedure other than a full oral hearing at which all disputed issues are thoroughly aired. The requirement of a full hearing specified in this statute brings into play the provisions of Section 7 of the Administrative Procedure Act (5 USC Section 556), including, among other matters, the requirement that

> "a party is entitled to present his case or defense by oral or documentary evidence, to submit rebuttal evidence, and to conduct such cross-examination as may be required for a full and true disclosure of the facts.

Case law as well as statutory law indicates that a full oral hearing is required. In the Morgan I case, Morgan v. U.S., 298 U.S. 468 (1938) the Supreme Court held an order of the Secretary of Agriculture to

be void because he failed to allow the "full hearing" required by the Packers and Stockyard Act. In a subsequent case, Morgan vs. U.S., 304 U.S. 1 (1938), the Supreme Court described the requirement of a hearing as "essential alike to the legal validity of the administrative regulation and to the maintenance of public confidence in the value and soundness of this important governmental process". 304 U.S. at 14.

In interpreting Section 309 of the Communications Act, which also calls for a "full hearing", the Supreme Court stated that it

> "agrees that a 'full hearing' under Section 309 means that every party shall have the right to present his case or defense by oral or documentary evidence, to submit rebuttal evidence, and to conduct such cross-examination as may be required for a full and true disclosure of the facts.... Such a hearing is essential for the wise and just application of the authority of administrative boards and agencies." U.S. v. Storer Broadcasting Co., 351 U.S. 192, 202 (1956)

Similarly, the Court of Appeals for the District of Columbia, interpreting Section 7(c) of the Adminsitrative Procedure Act, stated:

> "no sanction shall be imposed or rule or order be issued except upon consideration of the whole record.... Every party shall have the right to present his case or defense by oral or documentary evidence, to submit rebuttal evidence, and to conduct such cross-examination as may be required for a full and true disclosure of the facts." Wirtz v. Baldor Electric Co., 337 F.2d 518 (D.C. Cir., 1964).

In another phase of this very docket, the Commission ordered oral hearings, with their full panoply of procedural rights, in accordance with the "full hearing" requirement of § 222(e)(3), thus rejecting a vigorously urged argument that the Commission should grant an "interim" increase in divisions of tolls pursuant to this section without a hearing. International Record Carriers' Scope of Operations, 43 FCC 2d 661 (1973).

Furthermore, in the same proceeding, the Commission's Review Board has pointed out the value to the Commission of the "full hearing" requirement of § 222(e)(3), stating that:

> "[T]he requirement of a full evidentiary inquiry serves to facilitate a comprehensive, accurate and efficient disposition of the object of the proceeding. [Citation omitted]. Under Section 222(e)(3) of the Communications Act, Congress has simply provided for the same procedural safeguards in rule making as in adjudicatory proceedings." 29 RR 2d 507, 510 (1974).

In the final paragraph of the Commission's MO&O released November 26, 1973, the Commission stated that it "will make such further orders herein as are necessary or desirable". 43 FCC 2d 1174, 1182 (1973). WUI assumes that in view of the statutory prescriptions of the Communications Act and the Administrative Procedure Act, and precedents of the U.S. Supreme Court and other courts, and of the Commission itself, the Commission will deem it

to be both "necessary" and "desirable" to require that a full oral hearing be conducted prior to any determination of the appropriate revisions, if any, to the International Formula.

When the data is available, WUI expects to put forward proposals for the Commission's consideration, and proper examination at a full hearing. In the meantime, WUI urges the Commission not to take any action without the full information that will be generated by the WUTelCo study and the "full hearing" required by law.

In the Matter of	)	
	)	
International Record Carriers' Scope of Operations in the Continental United States, Including Possible Revisions to the Formula prescribed under Section 222 of the Communications Act	)	Docket No. 19660 RM-690

COMMENTS OF TRT TELECOMMUNICATIONS CORPORATION

By Memorandum Opinion and Order, released November 26, 1973, in Docket 19660, the Commission ordered an investigation to determine whether the distribution of telegraph message traffic under the Formula prescribed pursuant to Section 222(e) (1) of the Communications Act for the distribution of outbound international message traffic handled by The Western Union Telegraph Company (WU) is unjust, unreasonable, or inequitable. The Commission further ordered that the investigation should include the following issues:

(1) The exact manner in which the distribution of traffic is presently being made, broken down by carrier, category of traffic, and areas and sub-areas.

(2) The nature, extent and reason for the existing overages and deficiencies in assigned quotas. Each carrier is to present full data with respect to its overages or deficiencies, by area and sub-area, as of each year-end for the ten years ending December 31, 1972, and an estimate for the year ending December 31, 1973; as well as totals, by area and sub-area, since distribution began under the Formula.

(3) The present defects in the Formula, pointing out with specificity the effect of each claimed defect not only on the respondent, but also on other international record carriers and on the quality of service provided to and the rates charged the using public.

(4) The specific amendments which should be made to the Formula to remove each such defect, the effect each such amendment will have on respondent, other international record carriers, and on the quality of service provided to and the rates charged the using public.

With regard to the first issue, the Commission, by Memorandum Opinion and Order, released June 10, 1974, in Docket 19660 ordered that WU conduct a quantitative study of outbound international message traffic to determine the exact manner in which the distribution of such traffic is being made. Concerning the data required to meet the objectives discussed in the second issue, this data has been submitted to all parties and the Commission, except that actual data rather that estimates have been provided for the year ending December 31, 1973.

Below TRT discusses the manner in which the distribution of international message traffic is made as prescribed by the Formula; the nature, extent and reason for the existing overages and deficiencies in assigned quotas; and the present defects of the Formula and their effects on the international record carriers and the using public. TRT concludes:

(1) that the International Formula for the distribution of outbound international message traffic handled by the Western

Union Telegraph Company is grossly inequitable and illogical; and,

(2) that the International Formula should be revised to establish a methodology for the distribution of unrouted message traffic which will be equitable and logical, will properly reflect today's industry structure, and will readily adjust to tomorrow's industry changes.

TRT also sets forth a fair and logical method for the distribution among all eligible carriers of U.S. outbound unrouted message traffic. TRT believes this to be immediately adaptable to industry changes and enhanced technology, and one which functions automatically.

A. Background

The International Formula states that

"The traffic for which distribution is provided herein is alltelegraph traffic, ...specifically routed and unrouted, handled by the [Western Union Telegraph Company (WU)] originating in the continental United States and destined to points outside the continental United States, Canada, and Mexico;..."[1/]

For the distribution of traffic handled by WU, the Formula provides that "(i) specifically routed messages shall be transferred to the international carrier indicated by such

---

1/"Formula, Pursuant to Section 222(e) (1) of the Communications Act of 1934, for the Distribution of Outbound International Traffic Handled by The Western Union Telegraph Company Following Merger with Postal Telegraph Co., Inc.," prescribed by the Commission. 10 FCC 184 (1943), amended 25 FCC 532 (1958), 30 FCC 323 (1961) and 30 FCC 951 (1961); page 1.

routing; and

(ii) unrouted messages in each category shall be distributed....so that each international carrier entitled to a quota in such category will receive a volume of such unrouted messages which, together with [specfically routed messages and messages picked up directly by each international carrier], will give it a percentage, equal to its quota in such category, of the gross international tolls on all messages in such category."[2/]

The term "Quota", as employed, is defined generally as the ratio of the number of outbound messages, whether picked up directly by each international carrier or transferred to it by [WU], handled by each international carrier during the base year 1942 (or as adjusted) to the total number of outbound messages in the base year. Separate quotas by carrier were established for each defined destination sub-area by origin of the gateways of New York, Washington and San Francisco, and the hinterland; and within each origin location by category of message. Consequently, an international carrier may have a distinct quota for each category of message for each origin-to-destination movement.

1. "Overages" and "Deficiencies", and the Maintenance of Base-Year Quotas

The International Formula also provides that "The supervision of the operations of this formula shall be under a committee of representatives of each of the interested

---

[2/] Ibid; Page 8.

international carriers..., the staff of which committee may function at the distribution offices of [WU],...."[3/] The International Formula Committee (as the committee of carrier representatives is called) created a staff, the International Quota Bureau (IQB), to administer the operation of the Formula.

To enable the IQB to function, the Formula requires that "Each international carrier entitled to share in such distribution shall furnish to the joint distribution offices any information necessary to enable such distribution of unrouted messages to be effected in accordance with this formula."[4/]

The "information necessary to enable such distribution" was from the outset provided by the international carriers to the IQB. The data included the number of messages, words and the gross international tolls (GIT's) for both routed and unrouted messages combined; and totals were accumulated for each destination sub-area according to the defined gateways or hinterland origin and the category of message. The IQB then calculated the percentages of participation for each carrier for the month reported, and compared these against each carrier's quotas. Where a carrier received more than its quota, the IQB recorded an "overage" in GIT's equal to the difference between the GIT's reported and the calculated GIT's allowable based on the quota. This also meant that a total "deficiency"

3/ Ibid, Pages 12-13.

4/ Ibid, Page 8.

of an equal yet negative amount was recorded for another carrier or other carriers.

Whenever "overages" and "deficiencies" occur, the Formula provides "If the [unrouted] messages so distributed fail in any month to give to any international carrier its quota of gross international tolls from such category, the distribution of [unrouted] messages shall be modified as soon as is practicable after the ascertainment of such deficiency in such manner as to compensate for such deficiency and to assure to such carrier thereafter its quota of gross international tolls from such category of traffic."5/ To comply with the Formula, the IQB, when "overages" and "deficiencies" first began to occur, issued instructions to [WU] to adjust the proportionment of unrouted messages for specific message categories for the coming month(s) to eliminate both the GIT's "overage" of the advantaged carrier(s) and the GIT's "deficiency" of the disadvantaged carrier(s).

However, it soon became apparent that it would be largely impossible to maintain the quotas established for each carrier. Although the Formula specified "The traffic for which distribution is provided herein is all telegraph traffic... handled by [WU] originating in the United States..."6/ (emphasis added), the mechanics for administering this distribution included the measurement not only of traffic handled by [WU], but also of traffic picked up directly by the international carriers. Furthermore, the Formula stated that "The right to receive a

---

5/Ibid, Page 8.

6/Ibid, Page 1.

quota under this formula shall not purport in any manner whatsoever to limit or to restrict a carrier's scope of future operations; and although a carrier may not qualify for a quota, it shall always be entitled to receive its specifically routed traffic to all destination areas...".[7/] With the GIT's for traffic picked up directly by the international carriers added, and as a result of the industriousness of some carriers in acquiring "picked up" traffic, the accumulated "overages" and "deficiencies" became so large that even when all unrouted traffic was adjusted from the carrier(s) with "overages" to the carrier(s) with "deficiencies", there was insufficient unrouted traffic to overcome the imbalances. Also, as the Formula safeguards the right to retain all specifically routed traffic, the IQB could not instruct [WU] to reroute any specifically routed traffic to eliminate quota discrepancies. For those destination sub-areas where, for whatever reason, a carrier had no quota, it was immediately impossible to maintain the established quotas from the point where that carrier began handling specifically routed traffic to those destination sub-areas. All GIT's collected by the carrier without quotas were recorded by the IQB as "overages", and there was some mix of "deficiencies" recorded for the carriers with quotas, the sum of these "deficiencies" equalling the amount of the "overage". Following the Formula's guidelines, the IQB was required to attempt to eliminate the discrepancies. However, as the carrier with the "overage" had no quota and, therefore, no

---

7/ Ibid, Page 3.

unrouted traffic, and since no specifically routed traffic could be taken from that carrier, the IQB was left with adjusting the unrouted traffic among the carriers with quotas in a futile attempt to erase the quota discrepancies.

What has resulted from the operation of the Formula can be seen in the statistics for 1962-1973 presented by the IQB to the parties in this investigation, and to the Commission. "Overages" and "deficiencies" amounting to millions of dollars have accumulated, with no possible method of eliminating them. Nevertheless, the important issues are what these "overages" and "deficiencies" mean in relation to today's industry structure, what the impact of the Formula's defects has been on the participating carriers as well as the using public, and what changes should be made.

2. "Overage" and "Deficiency" - Their True Meanings

It is essential to realize that the accumulated GIT overages and deficiencies of the international carriers indicate only the relative standings of the international carriers today with respect to what were their relative standings in the base year; and that they do not, therefore, indicate that a carrier with an overage is in an advantaged position, while a carrier with a deficiency is in a disadvantaged position. This relationship is determined only by comparing the actual distribution of unrouted and routed traffic which results from the Formula's operation with the current operating arrangements between the international carriers and WU; and only from this perspective will the true inequities which exist, and have existed for

many years, become apparent.

While there were reasons for the special protections and unique traffic distribution methods of the Formula at its inception in 1943, principally concerning the variations in operating arrangements between each international carrier and WU, those reasons are certainly not valid in today's environment where the operating arrangements between each international carrier and WU are essentially identical. Hence, today's distribution of unrouted traffic to a specific carrier must, by the very nature of an unrouted message, be considered an award -- an advantage. Furthermore, as the Formula withholds unrouted traffic from the carrier with "overages" and awards this traffic to the carrier with "deficiencies", "overages" and "deficiencies" should today generally imply disadvantage and advantage, respectively.

Proof of this inverse relationship is found in the latest Chart of Merged Company Distribution Percentages issued by the IQB, dated April 30, 1974, and presented in Appendix A. The Chart illustrates in capsule form the instructions issued by the IQB to WU, which are in effect today, as to the proportionment among the eligible international carriers of all unrouted traffic. By comparing this Chart to the statistics on cumulative overages and deficiencies provided by the IQB,[8/] the correlation between deficiencies and the award of substantial amounts or the whole of unrouted traffic to an international carrier for each destination sub-area is straightforward.

8/ Statistics for each carrier reporting under the International Formul the gross international tolls dollars overages or deficiencies for each of the ten years 1963-1972; presented by the IQB, dated January 7 and January 14, 1974.

It is especially interesting to note the extreme right hand column of the Chart which contains the date of the last issuance of a change in the instructions by WU as to how unrouted traffic should be proportioned to each destination sub-area. Several instructions are more than 20 years old, and the later dates apply generally only to hinterland origin allocations. For the gateway origins, there have effectively been no changes for many years in the instructions allocating all unrouted traffic to one carrier for each destination.

B. Specific Formula Defects, and the Resultant Inequities

1. Formula's Operation Acts as a Disincentive to Better Service

TRT considers the most serious overall defect of the Formula to be the negative effect of its operation. From the Formula's beginning, where an IRC has handled more specifically routed traffic (both transferred by WU and picked up directly in its own gateways) than its calculated quotas, a right protected even by the Formula, that carrier has been penalized by having some or, more usually, all unrouted traffic withheld and given to another IRC. The disadvantaged carrier has, consequently, been frustrated, and has recognized the futility of the expense and effort to obtain more routed traffic; for to the extent that it issuccessful in developing a greater percentage of routed traffic, an equal amount of unrouted traffic is withheld and awarded to another carrier.

On the other hand, the advantaged carrier, which by no effort of its own has received huge volumes of unrouted traffic,

loses its incentive to improve service. Certainly there is no incentive to obtain routed traffic beyond a calculable amount, except in the few instances where a carrier's quotas are extremely high, since to do so would mean to exceed one's quotas and risk the loss of unrouted traffic of an amount equal to the amount of the gain in routed traffic.

The consequence of this is to dampen the initiative to compete through improvements in the service offered to and the rates charged the using public.

2. Formula Arbitrarily Denies Quotas

If for any reason a carrier had no traffic to a destination during the base year 1942 (or as adjusted), except where operations had been temporarily halted, that carrier has not been allowed a quota to that destination. TRT is particularly disadvantaged because of this provision, since TRT serves many more destination sub-areas, even in Area B, than it has quotas for. Not only does this preclude TRT's participating in any unrouted traffic to most of the destination sub-areas it serves, the denial of quotas adds further injury to TRT through a loss of potential return traffic from its foreign correspondents.

3. Inequities Are Doubled

The operating arrangements between the IRC's and their foreign correspondents generally provide for a proportionate amount of return traffic. Proportionate return traffic is given for both routed and unrouted traffic. Hence, where a carrier has been handling all of the unrouted to a destination sub-area,

or has enjoyed a quota advantage, that carrier has been twice rewarded. The consequence of this arrangement has been an arbitrary, unjustifiable advantage enjoyed by one carrier over another. The advantage is particularly inequitable where, as is TRT's case to most destination sub-areas, some carriers are not even allowed a quota.

4. The Formula's Method is Inconsistent with Its Objective

The Formula specifies that the traffic for which distribution is to be made is all routed and unrouted traffic handled by WU, originating in the continental U.S., and destined to points outside the continental U.S., Canada and Mexico. Yet the method of distribution includes the GIT measurements not only of traffic handled by WU, but of traffic picked up by the IRC's as well. As TRT has illustrated above, this has caused tremendous amounts of unrouted traffic to be awarded on an inequitable basis to RCA and WUI.

Furthermore, as TRT points out below, this method has allowed non-uniform methods of grouping and reporting data to the IQB. Some IRC's have been able to use this to their advantage, and have as a consequence received more unrouted traffic than they would have normally been entitled to receive even under the Formula. Since there have been neither controls over nor effective checks into the data reported by the carriers to the IQB, as evidenced by the inconsistencies between IQB annual totals by carrier and the carrier totals found in FCC data published annually, and even in IQB data, there appears to have been a juggling of reportable data according to what result will

prove the most advantageous to some IRC's.

5. Advantages Enjoyed by RCA

Referring again to the Chart of Merged Company Distribution Percentages presented in Appendix A, it is immediately apparent that RCA is a prime benefactor of the inequities of the Formula. RCA in effect enjoys all of the unrouted traffic to Area C, the Pacific, and has done so for many years. As long as the Formula continues in its present form, so will this inequity.

In accordance with Schedule B of the Formula, RCA receives 60.5 percent of WUI's quotas to the destination sub-areas of Continental Europe and Beyond the Continent (including Greenland and Iceland, but excluding Liberia), except for press, government and fixed text traffic. As also indicated by the Chart there is insufficient unrouted traffic to accord RCA its share; hence, RCA has since August 31, 1966, been receiving all of this traffic. In view of today's industry structure that special provision of the Formula must be considered an unfair advantage to RCA.

To Areas A and B, except for the provisions of Schedule B, RCA has no gateway quotas; only hinterland quotas. However, this has been used by RCA to its advantage. Normally, tolls reported under gateways refer mostly to traffic picked up directly by an IRC, while tolls reported as hinterland refer to traffic transferred by WU. The ambiguity lies in whether to consider transferred traffic which originates in a gateway as gateway or hinterland. Except for traffic handled

by WU public offices in the gateway cities proper, WU treats this traffic as hinterland, as do ITT, TRT and WUI. RCA, on the other hand, recognizes that if they treat this gateway-originated transferred traffic as hinterland traffic, it would significantly reduce or possibly eliminate the unrouted traffic RCA receives against its hinterland quotas for Areas A and B. Since RCA's gateway GIT's have no effect on its quotas to Areas A and B, RCA has lumped all of this type of transferred traffic into its gateway GIT's.[9/] Consequently, RCA appears to enjoy more unrouted traffic to Areas A and B than it would otherwise be entitled to receive.

6. Advantages Enjoyed by WUI

The Formula also provides that "all of the offices of [WU] located in the area 60th Street and south thereof in the Borough of Manhatten, New York; the office of [WU] located at [Kennedy] International Airport; the main office of [WU] located in the central business section of San Francisco, and one other office of [WU] located in the central business section of San Francisco in the general vicinity of the offices operated by [ITT] and RCAC, to be designated by [WUI] ; and the main office of [WU] in Washington, D.C., shall be considered as offices of

---

9/ It is significant to note that when an IRC receives a message transferred by WU, reflecting an origin of New York, Washington or San Francisco, the IRC has no method for determining whether that message was originated at a WU PMS office inside the gateway proper, or elsewhere in the city. For a message called into a CTB from an originator located inside one of the gateway cities proper, again there is no method for determining this. Therefore, one must speculate as to how an IRC would consider such a message as having originated in the gateway proper.

[WUI] within the perview of this section."[10]

While the Commission may have desired to shelter WUI from the competition of the established gateway city offices of ITT and RCA at WUI's inception, surely WUI's special status is no longer justified. Indeed, WUI, unlike the other three IRC's, has received the gift of established gateway city offices at no expense to WUI, since WU operates and maintains these offices. Moreover, from these WU gateway offices, WUI has received all of the unrouted traffic, regardless of destination. This means that WUI handles unrouted traffic even for destinations for which WUI has no quotas!

As can be seen from the Chart in Appendix A, WUI enjoys almost exclusive handling of all unrouted traffic to Area A, which includes the heaviest traffic volume countries of the world. In fact, according to IQB data for the year ending December 31, 1972, [11] WUI handled at least half of all transferred traffic to Area A. The majority of this traffic appears to have been unrouted traffic. On the other hand, WUI handled only one-sixth of the total traffic picked up by the IRC's destined to Area A. When a carrier's unrouted traffic is substantially more than its routed traffic (both picked up and transferred) to any destination

---

[10] "Formula", Page 4.

[11] Statistics for each carrier reporting under the International Formula; the total number of messages reported by the carriers for each of the ten years 1963-1972; presented by the IQB, dated February 1, 1974; Page 2B.

or area, the inequities caused by the Formula are clear.

C. Formula Revisions Are Clearly Justified

TRT has set forth some of the gross inequities which exist and are being perpetuated by the Formula, and has demonstrated the long-overdue need to effect changes which will offer fair treatment of all carriers based on contemporary industry relationships, not those of the distant past.

In seeking an equitable, logical method for proportioning unrouted traffic among all IRC's, the two fundamental criteria should be simplicity and flexibility. The simplest method, and a fair method, would be to proportion unrouted traffic equally between all IRC's serving each destination without regard to message category or length. The next least complicated, and another equitable method is that recommended in TRT's June 26, 1973, letter to the Commission. The points of that letter are herein reiterated with supportive comments.

- All Existing Overages and Deficiencies Should Be Eliminated

As TRT has already demonstrated the overage and deficiency measurements maintained by the IQB indicate only the standings of the IRC's today relative to what their positions were in the base year. Consequently, whether a carrier has been in an advantaged or disadvantaged position can only be determined by viewing the actual distribution of unrouted traffic when compared to today's industry structure. From this perspective, TRT has shown that accumulated deficiencies have caused most, and usually all unrouted traffic to identified destination sub-areas to be awarded to the carriers with these deficiencies, and that "deficiency"

therefore, actually is synonymous with "advantage." Under these circumstances, RCA's assertion that any changes in the Formula should recognize and account for RCA's "deficiencies"[12/] is absurd. To allow such a measure to be enacted would only further exacerbate the already-gross inequities of the current Formula.

- Any Carrier Handling Routed Traffic to an Overseas Destination Should be Eligible to Handle Unrouted Traffic

Some IRC's are excluded from the handling of unrouted traffic to specified destinations because they have no base-year quotas for those destinations. This is most inequitable in TRT's case, where TRT is ineligible to receive unrouted traffic to most of the destinations it serves. Moreover, the negative effect on the Formula's operation preempts the handling of unrouted traffic by some carriers even when they are eligible to receive unrouted traffic. These exemptions have created and maintained the inequities which exist and which are compounded by the reward of undeserved return traffic.

- Each Carrier Should be Allocated a Percentage of Unrouted Traffic to Each Destination it Serves (Directly or Indirectly) in Proportion to That Carrier's Share of the Total Routed Traffic to Each Destination; and "Total Routed Traffic" Should be Defined as Only that Traffic Originating in the U.S. Outside the Gateways.

12/ RCA letter to the Chief of the Common Carrier Bureau dated June 26, 1973, relating to ITT's petition seeking amendment to the International Formula.

This is an equitable method of allocating unrouted traffic, one which rewards rather than penalizes a carrier for carrying specifically routed traffic, and one which provides an incentive rather than a disincentive to improve the services provided to and the rates charged the using public. Competition would be encouraged, and successes in innovation and providing more attractive service to the using public would be rewarded by increase in both routed and unrouted traffic. It is also a method in line with the original intent of the Formula, which was to provide a method for the distribution of all traffic handled by WU. Traffic picked up directly by the IRC's in their gateways is not traffic handled by WU; hence, this traffic should not apply to any method for distributing unrouted traffic. Furthermore, by excluding from consideration the traffic picked up in the gateways, the gateway advantages of some IRC's over others, which are now being contested before the Commission Under Docket 19660, would be negated. Since this method would operate independently of gateways, it would adapt immediately to the outcome of the gateway issue.

- The Percentages for Each Carrier and Each Country or Overseas Destination Should be Determined Annually for the Latest Complete Year.

- The Carriers Should Report to the FCC the number and Tolls of all Routed and Unrouted Messages to Each Country or Overseas Destination.

- The Computation of the Percentages and the Verification of the Reporting Should be the Responsibility of the FCC.

- The IQB Should be Dissolved.

These recommendations could be easily implemented, and would provide a method for satisfying WU's requirements. Once each carrier's percentage of the routed traffic outside the gateways is known for each destination, a table could be constructed which would indicate the proportion to be accorded to each eligible carrier. Such a look-up table could be incorporated into any automatic switching facility now employed or proposed by WU. Then, as WU processes unrouted traffic, WU would simply proportion this traffic as received, without regard to length, category or toll.[13] As both routed and unrouted traffic are processed, WU could amass totals for messages, words and tolls by carrier by destination, and could provide the carriers and the FCC with a periodic activity report. With the carriers' inputs for routed traffic from other than gateways, performance could be verified and updates to the allocation table made annually as recommended, or as appropriate.[14]

---

[13] TRT believes that if unrouted traffic were proportioned as received by WU, i.e., randomly, over the long run, tolls would be proportioned between the IRC's in relative amounts equal to the percentages of unrouted messages each IRC would receive. Therefore, no provisions need be made for message category, length or toll.

[14] As an alternative to the manual process for performance verification and updates, a program routine in WU's automatic switch could calculate the percentages of routed traffic handled by each IRC for each destination, and could automatically make periodic adjustments to the allocation table. This feedback process could then be monitored for accuracy by the FCC and/or the IRC's.

As already indicated by TRT, this method is flexible and adaptable to industry changes, ~~and it allows WU to eliminate~~ the special and manual processes and unusual expenses now required to enact Formula directives.

COMMENTS OF
THE WESTERN UNION TELEGRAPH COMPANY

Pursuant to the Commission's Memorandum Opinion and Order, 43 FCC 2d 1174, and Memorandum Opinion and Order, FCC 74-565, released June 10, 1974, with respect to the Complaint of ITT World Communications Inc. for revision of the Formula for the distribution of outbound international traffic, Western Union herein submits its comments.

1. Heretofore, as part of this proceeding, Western Union has submitted a Statement, dated February 19, 1965, and a Supplement to that Statement, dated June 26, 1973, setting forth its views with regard to ITT's Complaint. We have reviewed those two filings and conclude that they remain generally applicable. Accordingly, Western Union reiterates its previous position, updated in light of current conditions.

2. ITT Worldcom's Complaint is divisible into two parts. First, it requests revision of the present Formula

quotas under which traffic is distributed among the international record carriers. Second, it requests revision of the Formula to permit the establishment of additional gateway cities by the international carriers.

3. With respect to ITT Worldcom's second request, dealing with the gateway cities, we assume that any revision to the Formula, adopted by the Commission, will be consistent with any modification in the industry structure which might result from Docket No. 19660. We, therefore, do not believe that any comment on ITT Worldcom's gateway proposal is required at this time. We, of course, reserve our right to be heard on the specific applications and proposals to expand the international carriers' operations beyond the present gateway cities which are now pending or may be advanced in Docket No. 19660.

4. In our prior comments we indicated that difficulties in implementing the present Formula and uncertainties in its interpretation have impeded the establishment of improved procedures and methods in Western Union's operations. In this regard, Western Union continues to be confronted with complaints from one carrier or another, to the effect that it is not complying with the prescribed instructions for the handling of unrouted cablegrams or that it is favoring one carrier to the detriment of the others. Such complaints cover the entire scope of our public message system, the centralized telephone bureaus, Greensboro, gateway city offices and the hinterland public

offices. Western Union continues to be placed in the unfortunate position of the initial arbitrator of disputes between the international record carriers. In this regard, although it has no interest in the proportion of traffic accruing to each international carrier and receives no benefits from its activities in implementing the Formula, it has been required to contend with threats of lawsuits and delays in its service improvement plans resulting from the opposition of one or more of the international carriers.

5. Also, we find that the existing Formula is becoming increasingly incompatible with requirements of the modern handling and processing of international telegrams. The implementation of the Formula distribution provision impeded somewhat the efficient handling of international telegrams even in the past, when such handling was done manually. The problems of implementing the Formula in the context of Western Union's computerized switching system present much greater problems. In this regard, it is estimated that the capital cost of programming the Company's computers to provide the current distribution would be approximately $150,000. Substantial additional programming cost would be incurred each time changes in the existing distribution would be made pursuant to the Formula quota provisions to reflect changing traffic patterns.

6. Although Section XI of the present Formula provides that all of the costs incurred by Western Union in the

distribution of traffic under the Formula shall be equitably shared by the international carriers, Western Union's experience has been that, as a practical matter, it has not been able to recover its full costs in providing this service. In this regard, the Company has experienced difficulties in obtaining the agreement of the international carriers to the amount of its costs and the equitable distribution thereof and has been forced to accept less than full compensation to secure settlement with the carriers.

7. In view of the foregoing, Western Union requests that the Commission consider the feasibility of eliminating the Formula quota system entirely and, in lieu thereof, requiring that all cablegrams be specifically routed by the sender.

8. If this is not found feasible, Western Union requests that the Commission revise the Formula to transfer the responsibility for the distribution of unrouted traffic from Western Union to the International Quota Bureau (IQB) or some other instrument of the international carriers. Under this approach Western Union would transfer unrouted cablegrams to the IQB, who would then pass the traffic to the international carriers in accordance with the revised Formula. Western Union would be agreeable to leasing operating space to the IQB at a suitable Western Union location. Western Union would provide no services for unrouted cablegrams other than those provided for routed cablegrams. Such an arrangement would relieve

Western Union of a source of continuous complaint and place the responsibility for performing this operation where it rightfully belongs, with an instrumentality of the international carriers.

9. If the Commission should determine that the public interest requires that Western Union continue its role in distributing unrouted cablegram traffic, we urge the Commission, as a minimum, to revise the Formula in a manner to ease the burden now incurred by the Company in providing this service.

10. In this regard, the Formula should be simplified to allow for an efficient mechanized handling. The Commission should consider the feasibility of revising the quota system so that all the unrouted traffic destined to each different overseas point is accorded to only one carrier. Most importantly, the Formula should be designed to preclude frequent changes in distribution requiring additional programming of the Company's computers. Since the operations of Western Union and the international record carriers are automated, frequent changes in the Formula would result in inordinate costs and possible delays.

11. As discussed in our prior filings, the language of the revised Formula should be precise and complete to reduce as much as possible the areas open to interpretation and subsequent conflict. Moreover, procedures should be established

to provide for the prompt resolution of any disputes which might arise in the light of changes in the operations of Western Union or the international carriers, new services and carriers, etc. The revised Formula should make clear that Western Union would incur no liability for any errors which it might make in its good faith efforts to distribute traffic among the carriers in accordance with the Formula.

12. The revised Formula should also make clear that all costs, including any capital costs incurred by Western Union to mechanize the quota distribution, will be borne by the international carriers. These costs would include the day-to-day expenses of the quota distribution operation, including distribution of traffic in accordance with IQB instructions, any facility costs that are associated with the unrouted traffic distribution, and any costs incurred by Western Union due to special handling required by a particular carrier. We also urge that under the revised Formula Western Union should be entitled to a reasonable profit for the services it provides in distributing the unrouted traffic. Western Union should no longer be responsible for the allocation of its traffic distribution costs among the international carriers. Rather, Western Union should be permitted merely to bill the IQB monthly for the total costs for the service it renders. The IQB would be responsible for the allocation of such costs among the international carriers.

WHEREFORE, Western Union respectfully requests that the Formula be revised in accordance with the comments set forth hereinabove and in Western Union's prior Statement filed on February 19, 1965, and its Supplement, filed on April 26, 1973.

Respectfully submitted,

THE WESTERN UNION TELEGRAPH COMPANY

In the Matter of	)	
	)	
International Record Carriers' Scope of Operations in the Continental United States, Including Possible Revisions to the Formula Prescribed under Section 222 of the Communications Act.	)	Docket No. 19660 RM-690

To: The Commission

REPLY COMMENTS OF RCA GLOBAL COMMUNICATIONS, INC.

On July 8, 1974 RCA Global Communications, Inc. (RCA Globcom) provided its comments on the question of whether the existing formula under which distribution of outbound international telegrams is made is unjust, unreasonable, and inequitable, or not in the public interest, and, if so, what changes in the formula should be made. We demonstrated in those comments that neither the carriers nor the Commission were able to cite any changes in the industry which would render invalid the Commission's decision in the Western Union Merger Proceeding, 10 F.C.C. 184 (1943) and thus the formula continues to be just, reasonable, equitable and in the public interest. In furtherance of our position, the following points were made:

- In its 1943 decision, the Commission prescribed the formula after finding that its terms were just, reasonable, equitable and in the public interest.

- A carrier seeking a change in the formula must carry the burden of proving clearly and specifically how the present formula is unjust, unreasonable, and inequitable, or not in the public interest.

- The need for change in the formula must be evaluated in terms of the public interest and not solely whether an individual carrier will benefit from the change.

- A change in the formula that would encourage greatly increased sales expenses and capital costs of the carriers or arbitrarily redistribute existing traffic would not serve the public interest.

- If a change in the formula is found to be in the public interest, the accumulated overages and deficiencies must be recognized.

The comments filed by ITT World Communications Inc. (ITT) and TRT Telecommunications Corporation (TRT), the only carriers opposing the existing formula on substantive grounds,* did not demonstrate in any specific way how the existing formula fails to meet the statutory standard contained in Section 222(e) of the Communications Act. Rather, it was apparent that no public interest would be served through the changes they proposed but instead only that revenues would be transferred to one carrier at the expense of another carrier. Therefore, it is only

---

* While The Western Union Telegraph Company (Western Union) requested a change in the formula, its comments were actually directed at the very limited issue of the administration of the formula. This point will be addressed in our comments below. Comsat General Corporation also filed comments to the effect that the distribution of maritime service telegraph traffic requires consideration separate and apart from the instant proceeding. It requested the Commission to defer any consideration of the maritime situation until a future time. We agree with this approach and accordingly will not reply to Comsat General in this proceeding.

necesary to supplement our comments in the several limited areas discussed below. But we would initially like to dispel the statement by ITT that the Commission originally prescribed the formula with the intention that it would be revised in very short order. See ITT Comments, Statement of Position, and p. 28. Actually, the Commission merely said:

> We cannot undertake to determine now the desirability of an adjustment in the distribution formula which by its nature cannot take effect until a time when the entire world communications picture may be profoundly altered. If the provisions already embodied in the formula for distribution of re-established traffic are not adequate to deal with the problem when it arises, we will review the matter in the light of all the facts, which are now unknown and will then be available. The end of the war may require a major revision of the formula which we have approved, and we do not desire to prejudge the issues which may then arise, by premature action at this time. Western Union Merger Proceeding, 10 F.C.C. 184 (1963) at 196.

Thus the Commission only recognized that the formula might not be adequate at some future time in a future set of circumstances. This is significant since from 1943 to 1964 there were no requests to the Commission for a change in the formula. Obviously during this twenty-year period the formula was operating in a satisfactory manner and was serving not only the private interests of ITT but also the public interest. It was only after twenty years that ITT first made its complaint that the formula prescribed in 1943 should be changed. If ITT found the formula satisfactory in the first twenty years, it should be able to state definitively the differences in

circumstances that changed a formula which it did not oppose to one it now terms anachronistic and outmoded. Significantly, its comments do not address this point and the only conclusion left is that ITT has now decided that it can obtain more revenues through a change in the formula and that a change should be made for that reason. We submit that this type of support for a change in the formula is totally inadequate and could not form the basis for finding the existing formula contrary to the public interest.

I. ITT And TRT Have Failed The Burden Of Proving The The Existing Formula Is Unjust, Unreasonable, And Inequitable, Or Not In The Public Interest

As already noted, the comments of ITT and TRT do not give any reasons why a change in the formula would be in the public interest. We submit that unless it can be shown that a change in the formula will have a real benefit to the public or, at least, that there be ground for reasonable expectation of such a benefit, then the carriers requesting a revision in the formula have failed to meet the burden imposed by Section 222(e) of the Communications Act.

A. The Service Rendered By RCA Globcom Is Of The Highest Quality

ITT might have tried to claim that the quality of service provided by one or all of the international carriers is deficient and that there is some causal connection with the formula as it

exists today in an attempt to give substance to its claim that the formula is unreasonable. However, such a claim is impossible; ITT consistently recognizes that the quality of international message telegram service is good. Thus it stated:

> That there have not been substantial degradations of service during the life of the formula must be attributed largely to the propensity of most carriers to place a value on customer satisfaction and good will beyond the mere dollar and cents involved . . . . ITT Comments, p. 11.

and

> Fortunately, the international record carriers have not succumbed to the formula disincentives and the formula era has, by and large, been marked by healthy and often vigorous competition. . . . [T]his fact can be largely attributed to the over-riding disposition of most carriers to provide high quality service in the interest of favorable customer relations, particularly since many of those telegraph customers will also be customers for other services offered by a carrier. ITT Comments, p. 14.

TRT, on the other hand, states that the formula's operation acts as a disincentive since the advantaged carrier loses its incentive to improve service. This statement is completely without support. TRT has offered no studies which would show that the quality of service of RCA Globcom is less than excellent. There is no assertion that RCA Globcom, or other carriers, have failed to introduce technologically advanced methods of handling international telegrams. The reason for the lack of hard facts in the TRT statement is because just the oppositive is true--for example, RCA Globcom has consistently been a leader in improving the method of providing international telegram service

so that a quicker, more cost effective, and generally better quality service is provided to the customer. While a list of all improvements in the method of providing international telegram service would be too extensive to include here, the following are the major changes that have been made by RCA Globcom:

- May 1964-- The first fully automatic commercial computer telegram switching system (CTS) in the world became operational permitting the elimination of the manual torn-tape system of handling telegraph traffic in the New York City central telegraph office with a resulting improvement in the speed and quality of telegram service.

- July 1969-- An automatic retrieval computer (ARC) system enabled RCA Globcom to eliminate most of the delays involved with the processing of telegrams rejected by the CTS caused by, among other things, format irregularities, invalid destination codes, and unrecognized registered addresses. It also provides for the automatic routing of addressed telegrams and generates data for examination and other purposes.

- April 1970-- A domestic automatic telegram system, an adjunct to the ARC computer system, became operational. It converts the format of Western Union originated telegrams to the C.C.I.T.T. F. 31 international format. This system eliminates the delays of manual processing of over 6,000 Western Union telegrams daily thereby providing quicker service to the customer.

- June 1971-- A computer clerical system served to speed the handling of telegrams by streamlining the clerical work connected with the examination of telegram traffic.

- July 1971-- An adjunct to the ARC system automated the delivery of telegrams to RCA Globcom subscribers in the New York City gateway.

- April 1972-- The automatic dial-out computer system was extended to Washington, D.C. subscribers.
- July 1972-- The San Francisco telegram system provided computer switching of certain telegrams to Pacific points previously manually handled by the SF gateway.
- November 1972-- The New York CTO telephone room was modernized with the installation of an automatic call distributor telephone system. As a result, there was a considerable improvement in the acceptance and delivery of telegrams by telephone.
- September 1973-- The automatic dial-out feature of the automatic retrieval computer system was extended to San Francisco subscribers.
- June 1974-- The automatic rerun and monitor computer system provided the CTS with an expanded capability for automatic reruns of telegram traffic.

B. A Change In The Formula As Requested By ITT and TRT Would Not Allow A Reduction In Rates To The Public

ITT or TRT theoretically might have tried to attack the formula by showing that a change in the formula would allow rates to the public to be reduced. Yet neither carrier made such an assertion since they both must realize that the rates are not above a reasonable level and that decreases would not be appropriate at this time.

As with the quality of service, the international carriers have served the public interest, in this case through a number of significant rate decreases since the inception of the formula. For example, in 1943 the rate per full rate word for a telegram to Australia was 60 cents as compared with 28 cents today.

Similarly, the rate to South Africa was 50 cents and is now 28 cents. Many other areas also show such significant decreases. And even those areas where the rates have gone up, the percentage must be deemed insignificant when viewed in the context of the many fold increase in the rates charged by Western Union domestically for a message telegram of equivalent length. Thus the history of telegram rates shows that the public has been served.

As was stated in RCA Globcom's initial comments, the formula has been a positive factor in helping to restrain the cost push associated with the provision of international telegram service. By diminishing the incentive of the carriers to expend excessive amounts on solicitation of directly routed traffic and wasteful duplication of existing facilities, the formula has successfully met the objectives of the Commission and thereby furthered the public interest.

The only manner in which ITT does address the rate question is to state that

> . . . since ITT Worldcom can expect some increase in unrouted traffic when the competitive "penalties" from the existing formula are removed, it believes that it may be able to offset at least in part any need for revenues increases, which may occur if the Commission should award Western Union an increased division of charges for the landline haul of international telegraph messages in the companion proceeding in this docket. ITT Comments, Appendix 1, Issue 4, p. 2.

But all this means is that if ITT were able to divert a large amount of revenue from the other carriers, it would be able to offset some increases in the landlines division. Unstated, of course, is that the other carriers would be in a much worse

position to absorb any such increase. The total effect would be to weaken the competing carriers and thus to defeat the very purpose for which ITT claims that the formula should be changed, i.e. to increase competition.

II. The Formula Permits And Encourages Reasonable Competition

In our comments, it was shown that the Commission recognized that the formula it was prescribing would limit certain undesirable consequences of competition. It did this, as noted above, so as to curtail excessive expenditures by carriers for solicitation of traffic and the duplication of existing facilities both of which have an adverse impact on the rates users pay. Far from using competition for competition's sake, the Commission presented a reasoned explanation of why certain consequences of competition should be restrained to benefit the public.

As ITT's comments recognize, the formula gives the international carriers some incentive to actively solicit traffic. ITT states that "[a]s a result of continuing competitive spirit, various carriers. . . attempted. . . to improve their relative market shares", ITT Comments, p. 16; that the alleged problem with overages and deficiencies lies "in traffic shifts resulting from competition between carriers", ITT Comments, p. 17; and that "[i]ndeed, the continued growth of competition can, at least in part, be attributed to this very formula which was apparently designed to restrain competition." ITT Comments, Appendix 1,

Issue 2, p. 7. All of these statements support the proposition that the formula does permit the competitive efforts of the carriers to be rewarded with increased revenues. The fact that there are some restraints, while not satisfactory to ITT in its pursuit of increased corporate revenues, has not and can not be shown to be adverse to the public interest.

The attempt to attack the restraint intentionally encouraged by the Commission under the formula as being contrary to the alleged policy that competition is good per se or that the Commission has a general policy of always favoring competition* must fail. As we pointed out in our comments, the Supreme Court has stated that the existence of a regulatory structure under congressionally devised public interest standards mandates that the Commission can not equate competition with the public interest unless it could be shown to be beneficial. See Federal Communications Commission v. RCA Communications, Inc., 346 U.S. 86 (1953). The Commission must, therefore, be careful to support its use of competition as a regulatory tool with findings that benefit, or at least the strong possibility of benefit, will accrue to the public. In the instant case, it has been shown in RCA Globcom's original comments and reinforced above that the only result from the change in the formula proposed by ITT will be to increase ITT's revenues which can hardly be automatically equated with

---

* See ITT Comments, pp. 13, 25, and 37.

public benefit.

III. The Effects Of A Change In The Formula Cannot Be Forecast Because There Are No Facts On The Exact Distribution Under The Formula

In accordance with the Commission's Memorandum Opinion and Order, 43 F.C.C. 2d 1174, the parties were required to address the following question:

> The specific amendments which should be made to the formula to remove each such defect, the effect each such amendment will have on respondent, other international record carriers, and on the quality of service provided to and the rates charged the using public. (Emphasis added).

RCA Globcom stated in the initial comments that it was unable to respond to the underlined portion of this issue because the necessary data base was not in existence. We went on to note that the Commission had required that a special study utilizing statistical sampling procedures be done so that the needed information could be accumulated. This study has now been authorized by all of the international record carriers and its completion is expected approximately in January, 1975.

ITT, however, urges that there is no necessity for waiting until the completion of this study and that instead the Commission should proceed and revise the formula on the basis of existing information. Such a procedure would not only be illogical but undoubtedly unlawful. The Commission cannot take action without first knowing the effect on the international record carriers and

this cannot be done without the factual foundation the Western Union study will develop.

In our letter of March 11, 1974, RCA Globcom showed that the International Quota Bureau (IQB) did not have any information regarding the number of unrouted messages transferred by Western Union in those situations where a single carrier receives all of the unrouted traffic. We further related that the IQB had acknowledged that the analysis it was preparing on the routed and unrouted to countries where porportional distribution is made apparently contained a considerable distortion. In a further letter dated March 27, 1974 RCA Globcom demonstrated that it was not possible to make accurate estimates of the effect of changes in the formula in view of the inaccurate data now available as to the manner in which the actual distribution of unrouted traffic is being made.

The Commission agreed with the position we expressed and in its Memorandum Opinion and Order of May 30, 1974 (FCC 74-565) stated that in framing the issues in the proceeding it "had assumed that an ample data base was readily available and that there would, therefore, be no problem in providing the requested information. Apparently we were in error."

It should also be stressed that ITT did not respond to the issue quoted above other than to state that "[t]he effect which the proposed formula will have upon rates is difficult

to predict with precision at this junction and ITT Worldcom, of course, cannot speak for any other carrier." ITT Comments, Appendix, Issue 4, p.2. As a result, the Commission can not make any findings nor reach any conclusions on the desirability of the changes in the formula requested by ITT or TRT except on a most arbitrary basis.

This problem concerning the lack of data was also the major factor why RCA Globcom is still insisting on an oral, evidentiary hearing, as is required by Section 222(e)(3) of the Communications Act, rather than a paper rulemaking one. While we have no doubt that an oral, evidentiary hearing could be insisted upon as a matter of right, especially in light of the Commission's statement concerning the absence of facts in this proceeding, the completion of the Western Union statistical study with the opportunity to file further comments after evaluating the study results, and before the Commission issues its decision, would almost, if not entirely, eliminate our concerns in this respect.

IV. Administration Of The Formula Does Not Require It To Be Changed

Western Union has commented that a change in the formula is necessary because it is becoming "increasingly incompatible with the requirements of the modern handling and processing of international telegrams." Western Union Comments, p.3. While the present method utilized by Western Union to make the distribution

may be less than desirable, it is also probable that the distribution could be computerized in a way as to eliminate the need for most, if not all, of the manual attention now required without altering the formula's fundamental basis. RCA Globcom would be willing to share in the costs needed to explore computer programming for this task.

However, it is clear that the revisions suggested by ITT would give Western Union the same administrative problems as the existing formula. Under each of their plans, the distribution of the unrouted traffic would have to be revised as the market share of each carrier changed. Since these changes could be expected to occur frequently, its proposals could actually necessitate Western Union changing the program more often than if the existing formula were maintained.

Western Union also complains that it has experienced difficulties in obtaining the agreement of the international record carriers on the amount of its costs and the equitable sharing thereof for its distribution services under the formula. The only disagreement we are aware of relates to the fact that Western Union has in the past sought to charge the international carriers for functions not involved in the distribution of unrouted traffic, i.e. costs which are supposed to be covered in the regular division of tolls. We do agree that the full costs of identifying which international carrier is to receive what unrouted traffic should be borne by the international

RESPONSE OF ITT WORLD COMMUNICATIONS INC.

ITT World Communications Inc. (ITT Worldcom) hereby responds to the comments filed on July 8, 1974 [1/] in the above referenced matter respecting revision of the International Formula. Initial comments were filed by RCA Global Communications, Inc. (RCA Globcom), Western Union International, Inc. (WUI), TRT Telecommunications, Inc. (TRT), Canadian Pacific Limited (CPL), Comsat General Corporation (Comsat General), Western Union Telegraph Co. (Western Union), and ITT Worldcom. ITT Worldcom, TRT, Western Union and Comsat General all urge that revision of the existing Formula is necessary. CPL seeks only to preserve its Australasia quota in any revision of the Formula. RCA Globcom and WUI, however, urge that nothing is basically wrong with this Formula, whose

---

1/ The comments of Canadian Pacific Limited were filed on January 23, 1974.

quotas, in 1974, are still keyed to 1943 market shares, and that no changes should be made.

ITT Worldcom's responses to specific positions urged by other carriers here follows.

I. The Commission properly found that an investigation of possible revisions to the International Formula was required

RCA Globcom, possibly sensing the substantive bankruptcy of its position, argues at some length that the Commission has erred in its determination that the ITT Worldcom Complaint and associated pleadings make a prima facie showing that the existing Formula is unlawful. This RCA argument, though obscure as to actual direction or import, appears directed to the propriety and lawfulness of the Commission's action in ordering that the Formula be investigated.[2/] The proposition is cited by RCA that the Commission's 1943 order prescribing the Formula would be entitled to a presumption of validity by a court in which the order had been questioned. From this, it infers that the Commission, itself, may not question the continuing lawfulness of the Formula nor review its 1943 order prescribing the Formula absent this Formula having been "conclusively

---

2/ As a procedural matter, this RCA argument would seem nothing more than a very late filed petition for reconsideration. ITT Worldcom will not however, pursue this procedural flaw since, as will be shown, the RCA argument is also without substantive merit.

shown to be contrary to the public interest". Moreover RCA suggests that the sole basis for the Commission's determination to review the Formula was the length of the period (thirty years) that the Formula has remained unchanged, a criterion which RCA urges is not a valid measure of the public interest.

The Commission clearly has descretion to exercise its investigatory authority greater than that urged by RCA, a point hardly worthy of serious argument. The whole weight of the Commission's history and the precedents established thereunder suggest a very broad descretion 3/. Moreover, the logical extension of the RCA argument would require that the Commission possess the very information which an investigation was undertaken to produce, before it could order that such an investigation be conducted. The resultant total paralysis of the administrative process is obvious.

Equally erroneous is the RCA position that the Commission's determination to order this investigation was predicated solely on the age of the Formula. While the Commission itself knows best the full basis for its determination, it is clear that the record before the Commission at the time showed many more specific ills besetting the Formula than simply

---

3/ See, for example, FCC v. Pottsville Broadcasting Co., 309 U.S. 134 (1940) and U.S. v. Southwestern Cable Co., 392 U.S. 157 (1968).

old age. That record showed that the distribution of unrouted traffic pursuant to this Formula produced serious inequities among competing carriers; that such inequities had been continuing for a number of years; and that the inequities would get worse if the Formula were not soon revised.

Even if the RCA position were found to have some merit to the extent that it urged that the order of investigation should not operate to shift the burden of proof, this argument and the issue were mooted by the July 8 comments of carriers urging revision of the Formula. Those comments are replete with conceptual description, and factual example, which show clearly that the existing Formula is unjust, unreasonable, inequitable and not in the public interest. Since the Commission has these comments before it, no useful purpose would be served by reiteration.

II. The present Formula is not in the public interest; it must be revised

In their efforts to preserve the status quo, both RCA and WUI argue that the Commission must affirmatively find that the existing Formula is not in the public interest before it can prescribe any revision to the Formula. RCA then argues that the ITT Worldcom Complaint focused largely on problems with, and suggested revisions of, the Formula

which reflected a self interest perspective rather than that of the public interest. WUI argues that positive harm to the public interest must be shown before a new Formula may be prescribed. In arguing that no such harm exists, WUI urges that the Formula operation has been and continues to be "successful", with traffic being smoothly and efficiently transmitted by Western Union. Thus, it argues, the public interest is clearly served.

Both RCA and WUI attempt to mold the public interest to suit their own private interests. RCA's arguments that ITT Worldcom's self interest is not an appropriate measure of the public interest conveniently ignores the corrollary proposition that RCA's interest in preserving the status quo is equally inappropriate to define the public interest. Similarly the WUI position that the Formula has worked "successfully" and thus operates in the public interest requires an extraordinarily narrow scope for the public interest. In WUI's view the Formula is "successful" because it mechanically works - all international messages delivered to Western Union are transferred to an IRC for foreign transmission. Such a mechanistic definition of success would make equally successful a purely random selection by Western Union of the IRC to whom an unrouted message is transferred, or for that matter, the transferral of all unrouted messages to a single IRC, assuming capability of the IRC to handle the volume.

Such a criteria for judging a given Formula hardly comports with the statutory mandate that the formula be just, reasonable, equitable and in the public interest.

Moreover, while the burden of proving unlawfulness of the existing Formula may lie initially with the carrier or carriers seeking revision of the Formula, this burden certainly has been met by the abundant documentation as to the unlawfulness of this Formula presented by the ITT Worldcom Complaint and associated pleadings and the initial comments of the numerous parties supporting revision of the Formula. Shown beyond dispute is that this Formula effects severe inequities in the distribution of unrouted traffic among competing carriers, inequities which derive solely from the original goal of preserving 1942 market shares, a goal, itself, inconsistent with the public interest in 1974. Concomitantly that Formula necessarily reduces to some degree a carrier's motivation to provide its customers with the best possible product at the lowest reasonable charge. In addition this Formula operates to frustrate, at least to some extent, the Commission's policies and determinations that the public should receive the benefits of healthy competition between the international record carriers. Clearly this Formula cannot be found to be consistent with the public interest, especially given the broad perspective the Commission has consistently used to measure the public interest.

Finally, both RCA and WUI appear to take the position that the Formula can only be found unlawful upon a showing that it is not in the public interest, notwithstanding a clear showing that it is unjust, unreasonable and inequitable. While the point is largely academic since the existing Formula is quite clearly not in the public interest, this position confuses the standard required by Section 222 of the Act for approving or prescribing a new or revised Formula and that for determining unlawfulness of an existing Formula, and needs to be refuted. In determining pursuant to Section 222, whether a proposed Formula will be lawful, the Commission must find that the Formula is just, reasonable, equitable and in the public interest. However, when reviewing an existing Formula the Commission is required to find such Formula to be unlawful and prescribe a new and lawful Formula if the existing Formula fails to meet any of the standards for lawfulness -- i.e. if the existing Formula is unjust or unreasonable or inequitable or not in the public interest it is unlawful and must be revised.

Even if the Commission were unable to find that the existing Formula was per se not in the public interest, there remains a clear basis for it to find that the distribution of traffic caused by the Formula is unjust and inequitable. Thus the Commission has been correct in its determination that the Formula should be investigated; and in the end the Commission must prescribe a revised Formula which will be just,

reasonable, equitable and in the public interest. The Formula revisions heretofore suggested by ITT Worldcom would satisfy those standards.

III. Alleged investment in physical plant premised on expectations of unchanging formula traffic is not a public interest criterion

RCA and WUI each offer the position that the existing Formula should not be changed because it would cause underutilization of physical plant for a carrier losing unrouted traffic, idled capacity which each claims was installed upon the expectation that the Formula distribution would remain unchanged indefinitely. This position is untenable both from the standpoint of the public interest and the specious basis which it finds in fact.

The ITT Worldcom complaint against the Formula has been a matter of public record for almost ten years. Given the flaws in the Formula which are apparent even on its face, its early revision should reasonably have been foreseen. 4/ Thus it would have been highly imprudent for any carrier management to scale its investment in

---

4/ By letter dated February 4, 1966, the Chief of the Common Carrier Bureau advised ITT Worldcom that action on the Complaint, which had been anticipated by that point, had been delayed due to other urgent matters, but that such action would be taken "at the earliest practicable date".

physical plant to a significant degree upon expectations that unrouted traffic distribution would not be revised. This degree of fiscal imprudence, if in fact it occurred, cannot be excused merely by urging that the public interest favors the avoidance of excess capacity in the industry. The Commission has never construed the public interest as requiring it to shape its policies so as to salvage the profits of an imprudent management.

On a more practical level, the positions taken by RCA and WUI are simply contrary to the realities of the plant necessary to the distribution of international telegraph messages. The physical plant under consideration is comprised largely of switching facilities and the outgoing lines to various foreign destinations. In the switching facility, which is usually a computer, a very large proportion of the total equipment required is largely independent of the volume to be switched, within fairly wide limits. The computer logic, its programming and much of its memory are generally established at somewhat irreducible minimums which can handle a rather large range of instantaneous volumes. The incremental portion of unrouted traffic for any given carrier which might be shifted to another carrier upon revision of the Formula could not, realistically, have been significant in influencing that carriers total investment in switching facilities. The non-relevance of this incremental unrouted traffic to

plant investment is even more apparent with respect to the outgoing circuits. As the Commission can easily determine from its own records (input data to the Commission's consolidated industry circuit status report for IRCs), there exist only limited instances where a carrier requires more than one 50 baud channel per country for telegraph message traffic. This irreducible minimum single channel will be required whether message volume is one or one thousand. Thus the incremental volume created by unrouted traffic should have no significant effect on plant investment as respects outgoing channels.

RCA has also argued that the international telegraph message market is declining and that therefore the Commission's policies supporting competition are not relevant to the instant inquiry. This argument is not relevant to the issue of whether the Formula should be revised even if the premise is true. Although in that connection the statistics cited by RCA to show that the market is declining could equally well be interpreted to show that the market, except for a brief spurt in the late sixties, has remained fairly constant. What RCA is basically arguing is that the Commission should not authorize any new competition in the international telegraph market, which begs the question before the Commission. Competition in the international telegraph message market has long been authorized by the Commission and presumably nothing in this proceeding

will change this fact. The question at issue is whether all competitors will get an equal opportunity to compete rather than, as today, some being hampered, others advantaged, by a clearly artificial restraint aimed at preserving market shares from an era 30 years remote in time and light years away in communications technology, services, and requirements. ITT Worldcom submits that Section 222 of the Act prohibits such an arbitrary and inequitable distribution of traffic and requires a formula which basically treats all competitors on an equal basis.

IV. The existing overages and deficiencies must be eliminated

RCA argues that the Commission is legally bound to provide for compensation to RCA for the accumulated deficiencies associated with its position in the Formula; RCA also urges that it is equitably entitled to such compensation because of its good faith compliance with the Formula. This position was anticipated and largely answered in ITT Worldcom's initial comments, and those arguments will not be here repeated. The RCA position that the Commission is legally bound to provide it compensation for accumulated deficiencies is premised on the prescription of the Formula by the Commission. Aside from the conceptual fallacies in this position addressed in the initial comments,

the argument also rests on the highly dubious proposition that the Commission's order prescribing the 1943 Formula operated as a warranty that each carrier would always receive exactly the proportion of the traffic which would be calculated pursuant to the Formula. Obviously this was not the Commission's intent or purpose; rather the Commission approved in principle an effort to distribute traffic, over the near short-term, so that the then existing market shares would be maintained. Since the Formula required that all specific routings of traffic be honored, the Commission must have foreseen the possibility that routed traffic handled by a carrier might exceed such carrier's quota for all traffic. It is inconceivable therefore that the Commission prescribed a Formula with a propensity for being unbalanced, with no effective machinery for redressing unbalances, if it intended to create compensable balances and rigid market sharing arrangements among the interested carriers.

Equally intenable is RCA's claim of an equitable right to be compensated for the accumulated deficiencies because of its good faith compliance with the Formula. The Formula is directed to Western Union and it therefore is the only carrier from which an affirmative "compliance" is required. That RCA has provided required data on its own traffic to the International Quota Bureau, paid its share of the Bureau's costs and generally accepted the Formula distribution without complaint during a period when

RCA was reaping substantial benefits under the Formula, simply shows that the carrier acts in its own obvious self interest.

Moreover, as an equitable matter, RCA has not been deprived by the Formula of any traffic which it has rightfully earned; instead it simply found itself unable to maintain in a competitive marketplace the large share of traffic it had enjoyed in 1942, even with a strong bias from the formula which shifted large numbersof unrouted messages to it for replacement of lost routed traffic.

V. Preservation, in a revised Formula, of artificial provisions for the distribution of Australasia traffic would be contrary to the public interest

CPL has urged that any revision of the Formula must preserve its existing quota of unrouted traffic to Australasia, which it claims to be the subject of a contract between itself and Western Union. For the same reasons earlier urged for eliminating Schedule B from the revised Formula, ITT Worldcom respectfully suggests that arbitrary traffic sharing or routing provisions based simply on 1943 traffic distributions have no place in a 1974 Formula and should be eliminated. And, as with Schedule B, the distribution of traffic to CPL for thirty years, pursuant to its agreement with Western Union has to be considered good and sufficient consideration in satisfaction of whatever obligation prompted the initial agreement. Moreover, even if still contracturally valid, the agreement between Western Union and CPL

cannot override the statutory obligation of the Commission to eliminate the striking inequities of the existing Formula.

VI. Only routings via authorized direct circuits should be used in determining proportionate unrouted traffic in a revised formula

In comments which largely parallel the position of ITT Worldcom, TRT urges that unrouted traffic be distributed in proportion to routed traffic, but would include in its allocation base, traffic via authorized direct circuits and via indirect routings. ITT Worldcom believes that inclusion of traffic via indirect routings in the allocation base would be unwise and has previously urged the Commission to use only traffic via authorized direct circuits in the Formula base. This position is based upon the following considerations. To distribute unrouted traffic in proportion to indirect routings would tend to circumvent and frustrate Commission determination as to the degree of competition among IRCs which is reasonable and in the public interest; it would deprive a carrier of traffic to points which the Commission had authorized it to directly serve, while at the same time rewarding, with unrouted traffic, another carrier which the Commission had not certified for service directly to such point. Indirect service necessarily results in a lower proportion of the message toll for the U.S. carrier than via direct service because of the toll share which must be paid to the indirect carriers'

intermediate correspondent. Thus, requiring that unrouted messages be sent via an indirect service would produce, by FCC fiat, an unnecessary impact upon-the U.S. balance of payments. This impact would be compounded by return messages received, at least in some cases, via the same indirect routings. Finally, as the Commission has previously recognized, the using public receives better service via the direct circuits. The chance for outage or message error is reduced; faster service is also likely due to the elimination of handling and potential congestion at the intermediate switching point. 5/

In its comments, TRT also urges that gateway traffic be excluded from the traffic base for the revised Formula. The context of its comments suggests, however, that it only wishes to exclude traffic directly picked up by the IRC's in the gateway, not Western Union transfers which were filed in the gateways. The latter position is consistent with the position suggested by ITT Worldcom. Accordingly, ITT Worldcom will reserve comment on this aspect of the TRT proposal in the hope that TRT will clarify the point in its responsive comments.

VII. Revision of the Maritime Formula is also required by the public interest

Comsat General has suggested that the Maritime Formula, which is an appendix to the International Formula, has also been rendered obsolete by changing events, particularly maritime communications via

---

5/ See, for example, ITT World Communications Inc. service to Korea, Memorandum Opinion, Order, Authorization and Certificate, File No. T-C-2038-4, released August 5, 1974.

satellite, and must be revised. ITT Worldcom is in basic agreement with the Comsat General position that a revision of the Maritime Formula is required. Indeed, most of the comments directed to the obsolete, inequitable and anachronistic nature of the International Formula are equally applicable to the Maritime Formula.

ITT Worldcom takes strong exception, however, to the Comsat General suggestion that a revised Maritime Formula should base unrouted traffic distribution in part on the relative capacity which each carrier has available in the market. A more irrelevant and arbitrary distribution criteria can hardly be imagined. This argument, which exactly parallels that of RCA and WUI in connection with the physical plant used for international telegraph message traffic, assumes that the unrouted traffic pool is to be used to subsidize a carrier which, for whatever reason, has acquired capacity in excess of that reasonably required to serve the market. The public interest does not embrace such a concept. As long as a carrier has sufficient capacity to accept offered traffic, the matter of available capacity should have no bearing on the distribution of unrouted traffic in any distribution Formula.

While ITT Worldcom agrees with Comsat General that a decisional mechanism must be provided in the Maritime Formula to separate unrouted traffic to be sent via satellite or via the hf/mf systems, this is a matter of primary concern for Western Union. Therefore ITT Worldcom will reserve

comment in anticipation of Western Union's position being made known in its responsive comments.

VIII. Administrative simplification of the Formula as urged by Western Union is a desirable goal but specific approaches may be unattainable or undesirable

In its comments Western Union has urged that the Formula be revised and simplified. In offering detailed suggestions Western Union heads its list with the proposal that all cablegrams be required to be routed by the sender. As ITT Worldcom has previously stated in response to this suggestion, it presents a goal to be sought, but does not appear presently workable. If Western Union wishes to pursue this approach it should offer specific methodology for implementing it, including means for assuring that routing selection by customers would be made on a basis which is fair to all carriers; for example, the basis should be such as to avoid the possibility of the customers routing being influenced by the name similarity between WUI and Western Union.

If it is to continue making the unrouted distribution itself, Western Union seeks a simplification of the procedures, perhaps by setting up exclusive countries for each carrier. ITT Worldcom agrees in principle with a simplification of procedures, but strongly opposes the idea of setting up exclusive countries. This approach contains the same flaws as pointed out by ITT Worldcom in its initial comments with respect to a Formula based on worldwide traffic as opposed to individual countries, and the arguments

raised there are equally applicable here.

CONCLUSION

ITT Worldcom has shown beyond dispute that the existing International Formula is unjust, unreasonable, inequitable and not in the public interest. It must be revised. ITT Worldcom urges that the Formula be revised so as to distribute unrouted traffic in proportion to routed traffic via authorized direct circuits. Such a Formula will be just, reasonable, equitable and in the public interest.

Respectfully submitted,

ITT World Communications Inc.

In the Matter of	)	
	)	
International Record Carriers' Scope of Operations in the Continental United States, Including Possible Revisions to the Formula Prescribed under Section 222 of the Communications Act.	)	Docket No. 19660 RM-690

REPLY OF WESTERN UNION INTERNATIONAL, INC.

Pursuant to the Commission's Memorandum, Opinion and Order released June 10, 1974, Western Union International, Inc. (WUI) hereby submits its reply to the comments of ITT World Communications Inc. (ITT), RCA Global Communications, Inc. (RCA), TRT Telecommunications Corporation (TRT) and The Western Union Telegraph Company (WUTelCo).

The Formula Well Serves Its Purpose

In considering any proposal to change the international formula, one cardinal fact must be kept in mind and that is that the formula works, and has worked satisfactorily for many decades. It is well understood by those who administer it, and by those who are entitled to its benefits. It has withstood the test of time, and by surviving for thirty years, without significant change to its basic structure, has proved to have been soundly constructed. It is noteworthy that over the entire span of its existence, no complaint or objection has ever been lodged against the formula by any member of the

public. In fact, the only objections ever heard come from carriers who clearly believe that they stand to gain traffic from a change in formula. Although their objections are couched in terms of the public interest, none of the pleadings filed in this proceeding have given any valid reason why the current operation of the formula is inimical to the public interest.

Consequently, the question that is before the Commission in this proceeding is solely concerned with how the unrouted message pie shall be sliced; not whether or not the public will benefit from a change in the formula. Whatever the Commission decides, service to the public will not be improved in the least. In fact, an abrupt change in the pattern of distribution of unrouted traffic may well impair service to the public, if as a result some carriers receive more traffic than they are set up to handle and other carriers have capacity which becomes idle.

An additional factor to keep in focus is that the Commission is required by Section 222(e)(3) of the Communications Act of 1934, as amended, to make a positive finding that the current formula "is or will be unjust, unreasonable, or inequitable, or not in the public interest". Consequently it is necessary for any proponent of a change to show by clear and convincing proof that the current operation

of the formula is not in the public interest. As will be shown hereinafter, this has not been done.

During its existence, the formula, and the organizations set up to administer it, the International Formula Committee and its operating arm the International Quota Bureau, have efficiently and effectively provided a mechanism to distribute unrouted traffic. As a result, the carriers involved are thoroughly familiar with the system. The procedures are well adapted and honed through long use to be efficient. As a result of their long experience with the formula, each of the carriers receiving traffic have been able to adapt their plant and equipment to provide the most cost-effective configuration to handle the amount of traffic expected to be received.

One of the principal arguments by the proponents of change in the formula consist in the mere assertion that the passage of thirty years somehow renders the formula ipso facto, contrary to the public interest. This argument appears to assume that after prescribing the formula in 1943, the Commission thereafter completely ignored the formula. This is far from the case. The Commission has had it under consideration on several occasions, when it had opportunity to make revisions in the formula. When necessary, the FCC has in fact made any changes deemed necessary to conform to

current conditions, without changing the essential nature of the formula.* The principal case arose in connection with the divestment of Western Union Cables. The formula was examined in detail, and many substantial changes were made to accomodate the fact that Western Union Cables was about to become an independent common carrier. Despite the fact that these changes occupied a great deal of the Commission's time and attention, and despite the passage of some 17 years since the adoption of the formula, the Commission then found no reason why the basic concept of the formula was detrimental to the public interest, and did not order any fundamental changes. Had there been any basic flaws in the concept and operation of the formula, they would have been as apparent after 17 years of operation as after 30 years.

No Change is Warranted Unless Required by the Public Interest

Certainly there are good reasons for retaining the formula as is, in the absence of a strong showing of harm to the public interest. The international record communications industry functions best when there is reasonable stability in the conditions under which it operates. Changes in the

---

* See, e.g., RCA Communications, Inc., 19 FCC 1070 (1955); The Western Union Telegraph Co., 25 FCC 532 (1958); RCA Communications, Inc., 29 FCC 485 (1960); The Western Union Telegraph Co., 30 FCC 323 and 951 (1961); The Western Union Telegraph Co., 2 FCC 2d 7 (1965).

formula, which controls the distribution of approximately four million messages, should not be made lightly. The plans and arrangements of the carriers, based upon the current distribution method, would be disrupted with consequent inefficiencies and wastage.

The positive achievements of the formula strongly militate against any change without a compelling showing of need. The formula must be credited with preventing the waste of resources in fruitless sales solicitation efforts, and duplication of facilities which bring no public benefit. It has also permitted a reasonable allocation of unrouted messages without constant inter-carrier disputes or favoritism. It must also be credited with achieving one of its principal aims in 1943; that of assuring the continued viability of the public message services of the international carriers. Partly as a result of the operation of the formula, the international record carriers have succeeded in maintaining the same price level (except for a one cent pass-through of an increase in landline haul costs) since 1958, in the face of sharply rising costs and escalating domestic public message prices. At the same time, the formula has fostered keen competition between the international record carriers in quality of service, as evidenced by the fact that all carriers have conducted extensive modernization and computerization of their facilities.

The Formula Has Not Been Shown to be Unjust, Unreasonable, Inequitable or Not in the Public Interest

I. Age Alone Does Not Invalidate the Formula

It is argued since the formula is now thirty-one years old, it is automatically inequitable and hence invalid. This is of course nonsense. There are rules and regulations of the Commission which are older than the formula - does this mean they are also to be considered invalid? Mere repeated recitation of the date that the formula was prescribed does not provide a valid basis for disrupting the industry with large scale changes of the formula, and does not provide the positive showing of harm necessary before any change can be implemented. As shown above, the Commission has repeatedly declined to avail itself of opportunities to revise it.

II. The Formula Does Not Diminish Incentives to Provide Better Service

One of the chief arguments made by proponents of changes in the formula is that its operation provides "disincentives" to providing better service.* This argument is based upon one aspect of the formula, whereby the routed

---

* Significantly, no allegation has been made that the formula provides an incentive to poorer service.

traffic is counted together with the unrouted traffic towards fulfilling a carrier's quota. Thus it is argued that in specific subareas, an increase in routed and self-originated traffic will lead to a corresponding offset in unrouted traffic. This, it is said, leads to a "disincentive" to better service since an increase in routed traffic will not lead to an increase in total traffic.

This argument reveals a misconception of the nature of the record message industry. The international public message service is today highly computerized. By the very nature of computer operations, it is absolutely necessary for every carrier to treat all messages handled by it in as nearly uniform manner as possible. Thus as a practical matter it is impossible to provide a better grade of service for messages to one destination than messages to another destination. Each carrier is dependent on its <u>overall</u> grade of service to maintain or increase its share of the market, and cannot discriminate amongst destinations. Even if this "disincentive" were to exist for particular areas, for particular carriers, each carrier obtains most of its traffic from routed and pickup traffic, and areas for which this "disincentive" does not exist. Thus no carrier can afford to let its service decline in any area.

The existence of substantial "overages" in numerous areas is proof that no "disincentive" exists. Where a carrier

has fulfilled its entire quota through routed and self-originated traffic, each additional message that it picks up through increased solicitation or improved service results in a net gain to that carrier. It is only in the severely limited number of cases where a carrier has not fulfilled its quota through routed traffic that this "balancing" provision of the formula applies. Every carrier has areas where the balancing provision does not apply; and consequently every carrier has strong incentives to increase its grade of service as much as possible, so as to foster a net increase in traffic. ITT admits that "there have not been substantial degradations of service during the life of this formula" (ITT Comments, page 11). Indeed the entire history of the international record carrier industry reveals continuing efforts by all carriers to improve their service, and the present highly developed, computerized operation is evidence that the formula has not in any way limited the inducement to provide the best possible service to the public.

III. The Formula Does Not Operate To Maintain Market Shares

The formula has been accused of being a market-sharing device, since it allocates traffic on the basis of the ratios of traffic handled in the base year. However, the formula itself was designed so as to prevent its being a device to freeze market shares.

It was specifically provided in the formula that all routing by customers should be honored. Every carrier has the right to solicit as much traffic as it wants in the form of routed and self-originated traffic. The formula states that "in distributing unrouted traffic, the Merged Company shall preserve for each carrier and for each category, so far as practicable, the relative distribution...which prevailed during the base period". The framers of the formula therefore foresaw, and specifically made provision for, changes in market shares which will be caused by carriers exceeding their quota by routed and self-originated traffic. Indeed the formula specifically provides that "the right to receive a quota under this formula shall not purport in any manner whatsoever to limit or to restrict a carrier's scope of future operations".

Thus all carriers have been free at all times to increase their traffic and to develop new market areas. TRT in particular has been energetic in finding new areas for its expansion. ITT has admitted that the operation of the international formula has not been an effective device for maintenance of market shares since each carrier "could exceed its base period traffic level with only routed traffic" (ITT Comments page 9).

IV. Overages and Deficiencies Do Not Warrant Change in the Formula

Proponents of change in the formula have urged that the existence of "overages" and "deficiencies" is in itself a sign that the formula is inequitable and thus needs change. It should be realized however that these "overages" and "deficiencies" do not represent real dollars owed by one carrier to another. Rather, they constitute a mere book-keeping device useful solely in the context of decisions relating to allocation of traffic destined to particular subareas. They are of value solely to IQB personnel in their efforts to insure distribution of unrouted traffic in accordance with quotas, "so far as practicable".

In some subareas, the routed or self-originated traffic handled by certain carriers have consistently been greater than the quota allotment of such carriers, thus leading to mounting totals of "overages". This fact however does not justify any change in the quota. All that means is that the formula's provision respecting market quotas has proved to be of less quantitative significance than the equally valid provision of the formula that specific routings by the customer should be honored. The cumulative overages and deficiencies merely indicate the extent to which it has proved not to be "practicable" to provide the precise market share originally designed. There is no violation of the formula in this. Neither the public nor any carrier is harmed by the

fact that in some areas the cumulative overages and deficiencies keep increasing. They are merely a tallying mechanism of no more monetary significance than Monopoly money. Certainly the fact that growing numbers appear on the ledgers of the IQB should not be of concern to the Commission or the public, since the increasing size of these numbers has no practical effect.

WUI Does Not Have an Unfair Competitive Advantage in Gateway Cities

Both ITT and TRT urge that the fact that the formula provides for the designation of certain Western Union Telegraph Company offices in the gateway as WUI offices, for the purpose of administering the formula, somehow gives WUI an unfair advantage. TRT urges that this designation is a "gift", since WUTelCo operates and maintains these offices. These designated offices do not constitute any advantage to WUI. Both RCA and ITT have far more offices in the main gateway city than WUI. There are only three offices of Western Union in New York City which are designated as offices of WUI for purposes of the formula. In contrast, RCA maintains 14 offices and ITT maintains 10 offices in New York City.* WUI is prevented by its agreement with Western Union, pursuant to the formula under which it receives the "benefit"

---

* In Washington and San Francisco, RCA and ITT each have one office, and one WUTelCo office is designated as a WUI office.

of these offices, from opening its own public offices. Furthermore, WUI receives no gift. For each of the messages received by Western Union at the "designated offices", and subsequently transferred to WUI, WUI is required to pay the full landline haul charges to Western Union. Neither ITT nor RCA pay these charges for messages that are filed in their offices. It is noteworthy that neither ITT nor TRT suggest that all IRC offices in gateway cities be closed in conjunction with its suggestion that WUI be deprived of the designation of Western Union offices. Such a proposal would have the benefit of eliminating duplicate facilities and increasing Western Union's landline haul revenue.

The Proposed Revisions Have Not Been Shown to Confer Public Benefits.

By their ardent advocacy of revisions to the international formula, TRT and ITT have demonstrated that each considers that it would gain traffic by the proposed changes. Significantly lacking, however, is any showing whatsoever that the public would be benefitted. No improvement in service to the public whatsoever would result. No operating improvements will be made; no message will be transmitted faster; and there will be no reduction in charges. Despite the surface simplicity of the proposal,

in practice the proposed formula would be far more comple . For example, there are many nations throughout the world to which no carrier has a direct circuit. These are all low volume areas; but provision would somehow have to be made in the formula for these destinations, leading to added complexity.

The proposed use of customer routings to govern distribution of unrouted traffic would inevitably lead to preferred treatment for large-volume business customers to the detriment of small users. A strong incentive would be created for carriers to intensively solicit the large users for routed traffic, since these messages would cause additional outbound unrouted traffic to be received; which in turn would generate increased volumes of inbound traffic through the proportionate return mechanism. The multiplyer effect thus created would lead to distortion in normal business activities. It would become essential for each carrier to concentrate attention on the area where it is easiest to obtain the multiplyer effect - the large business traffic - and to let the small user's traffic slide.

The substitution of the ITT/TRT proposal would undoubtedly cause a change in the traffic flows; but

there is no way of knowing at the present just how these flows would be altered. Thus it cannot be ascertained how each carrier will be affected. Conceivably, if a change in the formula affects the utilization ratio of the plant of one or more carriers sufficiently, the increased cost may lead to a request for increased tariff charges. Certainly the Commission should not gamble on the unknown effect of this proposal in the absence of a stronger showing of a public need.

Conclusion

In deciding whether or not to discard a mechanism that has proved its value over the years, the Commission must consider the following facts: the present formula serves the public and the carriers well; no detriment to the public has been shown; no advantage to the public of the proposal has been demonstrated; and the effect on the carriers of the proposed formula is totally unknown.

The international formula has been with us for a long time. All carriers are thoroughly familiar with this and have adapted their operations to it. In the absence of any compelling argument that the formula has become unjust, inequitable or not in the public interest, no changes should be made.

Respectfully submitted,

Before the
FEDERAL COMMUNICATIONS COMMISSION
Washington, DC 20554

In the Matter of	)	
	)	
International Record Carriers' Scope of Operations in the Continental United States, Including Possible Revisions to the Formula Prescribed under Section 222 of the Communications Act.	)	Docket 19660 RM-690

RESPONSIVE COMMENTS OF
TRT TELECOMMUNICATIONS CORPORATION

By Memorandum, Opinion, and Order (Order) released November 26, 1973 in Docket 19660, the Commission ordered an investigation to determine whether the International Formula (the Formula) should be revised. In response to the Commission's Order, Comments were filed by Comsat General Corporation, ITT World Communications Inc (ITT), RCA Global Communications, Inc (RCA), Western Union International, Inc (WUI), the Western Union Telegraph Company (Western Union) and TRT Telecommunications Corporation (TRT). TRT herein responds to the Comments filed by RCA and WUI.

The Commission in its Order pointed out that ITT's 1964 petition and the responses to that petition

> "[R]aise a substantial question as to whether the formula has kept pace with the developments in the industry since 1943. We agree that it is time, some 30 years later, to re-evaluate that structure in light of present realities." (Par 11)

The Commission concluded that:

> "We believe that the ITT petition and associated pleadings make a prima facie showing that the current formula is or will be unjust, unreasonable, or inequitable and thus not in the public interest." (Par 2)

Both ITT and TRT filed lengthy Comments further demonstrating the fact that the International Formula, which was prescribed by the Commission in 1943 (and is based on 1942 relative traffic distribution), is completely outmoded in light of the current industry structure and that based on current relative routed traffic distribution results in substantial benefits to RCA and WUI at the expense of ITT and TRT. Neither RCA nor WUI refute this point. Nor do they dispute the merits of the position advanced by TRT in its June 26, 1973 letter to the Commission.

Instead RCA and WUI raise procedural issues. They take the position that ITT and TRT have the burden of proof that the Formula is not in the public interest. They further contend that a "full hearing" is required pursuant to Section 222(e)(3) of the Communications Act before the Commission can prescribe a revised Formula. Indeed, WUI goes so far as to state that "the Commission must have positive proof of significant, lasting damage to the public interest." (Comments of WUI, p 2) However, WUI gives no support for requiring such a high standard of proof.

In any event TRT believes that its Comments conclusively demonstrate that the Formula is unjust, unreasonable and inequitable, and not in the public interest. Indeed, in its Comments (pp 10-11) TRT explains how the Formula actually acts as a disincentive to the carriers to improve their message service.

Moreover--while both RCA and WUI attempt to minimize the importance of revising the Formula so as to make the distribution of unrouted messages more equitable among the competing international record carriers--the very passage which RCA quotes from the Western Union Merger Proceeding at page 9 of its Comments undermines its position. In that passage the FCC states that, in arriving at a Formula which is in the public interest, "weight should be given to the equities as between the various carriers, and to the interests of the public in maintaining the strength and service of all carriers. . . ."

Turning to the issue of whether a "hearing" procedure is required, TRT is aware that Section 222(e)(3) of the Communications Act specifically refers to a "full hearing." However, since no facts material to the resolution of this proceeding have been controverted, it would appear that under these peculiar circumstances, a hearing procedure would be meaningless and hence unnecessary. Nevertheless, if despite these circumstances, the Commission is of the view that Section 222(e)(3) requires a hearing to be held, TRT submits that such a hearing

should be expeditiously held so as not to further delay the outcome of this proceeding.

Finally, TRT reaffirms its position (as indicated on page 16 of its Comments) that the simplest method, and a fair method, for proportioning unrouted traffic among the US international record carriers (IRCs) would be to divide unrouted traffic to each and every destination equally among all IRCs tariffed to serve that destination. An alternative, but more complicated method, would be to allocate unrouted traffic in proportion to the amount of routed traffic generated to each and every tariffed point.*

CONCLUSION

In view of the foregoing and TRT's Comments filed July 8, 1974, TRT submits that the Formula should be revised in accordance with the suggestions advanced by TRT.

Respectfully submitted,

TRT TELECOMMUNICATIONS CORPORATION

RESPONSE OF
THE WESTERN UNION TELEGRAPH COMPANY

The Western Union Telegraph Company (Western Union) herein submits its response to the comments of ITT World Communications Inc., RCA Global Communications, Inc., Western Union International, Inc., and TRT Telecommunications Corporation (collectively referred to herein as International Record Carriers) in the above-referenced proceeding.

1. Before commenting on the specific suggestions of the International Record Carriers, Western Union reiterates its principle position as stated in its comments that if the quota distribution system cannot be eliminated, that Western Union be permitted to withdraw from the handling and distributing of unrouted cablegram traffic. There is no need that Western Union take part in the distribution of unrouted

traffic. Western Union continues to find itself placed in the unwanted (and unnecessary) positions of being subject to various International Record Carriers' complaints, of having to expend its own financial and manpower resources on a matter essentially unrelated to a revenue producing activity, and of failing to fully recover its cost of the quota distribution operation. To further complicate the latter problem, any increase in cost to be borne by the International Carriers must be negotiated and agreed to by all the International Record Carriers, resulting in considerable time being spent by Western Union personnel in the negotiating process and an increase in cost, at least initially must be borne by Western Union. Certainly, the handling of unrouted cablegram traffic and the responsibility for performing this operation should be handled by separate instrumentality of the International Carriers formed specifically for this purpose.

2. Of the Carriers filing comments, only ITT World Communications, Inc. (ITT) and TRT Telecommunications Corporation (TRT) made specific suggestions as to the manner in which the formula should be revised. Briefly, ITT argues for an approach which would eliminate quotas as such and distribute unrouted traffic equally among all carriers for authority to serve a given destination. Unrouted traffic would be distributed in proportion to routed traffic by carrier and by destination country. Western Union

suggests that if this proposal is adopted by the Commission, and if Western Union is to be a part of the quota distribution operation, the Commission fully consider how any new formula will effect the efficiency of Western Union's automatic operations, and whether it will be compatible with Western Union's existing programs.

3. TRT suggests that the Quota Bureau be dissolved; that the percentages for each carrier and for each country or overseas destination be determined annually for the latest complete year; that the carriers report to the FCC the number and the tolls of all routed and unrouted messages to each country or overseas destination; and that the computation of the percentages and the verification of the reporting be the responsibility of the FCC. TRT also urges that Western Union be substituted for the Quota Bureau, arguing that a "look-up table" could be easily incorporated into any automatic switching facility now employed or proposed by Western Union and that Western Union would simply proportion all traffic as received. In other words, TRT advocates that by incorporating the Formula into Western Union's software programs, our requirements with regard to ease of operation would be satisfied. However, such is simply not the case. The altering of our software programs is not necessarily an easy task, manual processing would continue to be necessary,

and the periodic reports on messages and tolls suggested by TRT, in which presumably Western Union would have to participate, would be an extensive and time-consuming operation, resulting in further programming and operational difficulties. Again, the International Carriers can handle these problems by themselves, with Western Union simply turning over all unrouted messages (assuming our "all routed" recommendation is not adopted by the Commission) to an instrumentality of the International Carriers established specifically for that purpose.

To: The Commission

FURTHER COMMENTS OF RCA GLOBAL COMMUNICATIONS, INC.

RCA Global Communications, Inc. (RCA Globcom) hereby submits further comments on the question of whether the existing formula under which distribution of outbound international telegrams is made is unjust, unreasonable, and inequitable, or not in the public interest. In the comments filed on July 8, 1974 and the reply comments filed on August 16, 1974 RCA Globcom demonstrated that the formula is lawful and accordingly should not be changed. ITT World Communications Inc. (ITT), on the other hand, continued to argue in its August 16 filing that the formula is contrary to the public interest and also inequitable to the carriers.

In view of the extensive filings already submitted, RCA Globcom believes that only the following points need to be emphasized at this time. First, neither the public interest nor the consideration

of equity between the carriers requires a change in the formula. Second, the traffic effects of a change in the formula cannot be reasonably forecast without the statistical data on unrouted traffic that will be provided by The Western Union Telegraph Company (Western Union) study. Failure of the Commission to consider the consequences of a change in the formula on the public and the carriers based on the unrouted traffic data would be legal error as will be shown below.

The Public Interest Will Not Be Served By A Change In The Formula As Suggested By ITT

In our prior comments, we showed that international telegram volume today is approximately 16% lower than in 1963 and that the longer term trend indicated further decreases in volume. We argued that given this type of market, increased competitive efforts of the international carriers would merely add to solicitation costs which could not be offset through increased volumes. These costs eventually would have to be passed on to customers in this presently static market in the form of higher rates. The result is clearly that the public would not be served through a change in the formula that lead to increased soliciation of traffic. For these reasons, and the others in our prior comments, we stated that the Commission should find the existing formula lawful and likewise reject the ITT arguments calling for a new formula under which the unrouted traffic would be distributed in

proportion to the routed traffic.

RCA Globcom's position concerning the public interest has not been countered by ITT. It has not disputed our contention that greatly increased solicitation costs will result from the change it recommends. It has not stated that rates will be reduced. In summary it has completely failed to come to grips with the public interest consideration. ITT's response is to the effect that while its self-interest may not equate with the public interest, neither does RCA Globcom's interest in maintaining the existing formula. We have never equated the public interest with increased revenues to RCA Globcom. Rather the entire argument in our prior comments has been in terms of service to the public, rates to be paid by the public, and other considerations that relate to the public interest.

Even though ITT has not refuted the assertion that the result of its recommended change in the formula will be an increase in soliciation expenses for all carriers, it is relevant to consider the effect in dollars such an increase could have. RCA Globcom estimates that approximately $2-3 million will be expended this year by the international record carriers just in the effort to solicit international telegram traffic. With the ITT change, this amount would probably increase greatly.

It is very doubtful that this industry cost of soliciting traffic produces any appreciable amount of new revenue that would

not otherwise exist. As a result telegram users in the long run will pay for these costs without any particular benefit. The Commission should consider whether there is any public benefit to continuing these unnecessary operating expenses and whether it would be more beneficial to establish policies to reduce them.

It should be noted that the carriers face a time period that is extremely difficult. Costs of providing service are rising at unprecedented rates and it is expected that this trend will continue for the foreseeable future. Under the circumstances, it will take every possible effort just to maintain the existing level of rates. In view of this situation, the Commission should consider establishing policies to help hold down the spiralling costs such as:

- Minimizing the incentive of carriers to spend unproductive sums of money on efforts to the extent that no benefit accrues to the user. The present formula does have such a restraining effect on solicitation expense.

- Consider other means that would relieve the customer that chooses to send unrouted traffic of the cost burden of solicitation. This could be accomplished by charging customers who route their messages for the two words "via XYZ".

It is probable that adoption of these two principles in the long run would save users millions of dollars a year and thus be beneficial to the public.

Equity As Between The Carriers Does Not Require A Change In The Formula

Realizing that it cannot show that the existing formula is adverse to the public interest, ITT states that it only has to demonstrate that the formula is inequitable as between the various carriers. Aside from its legal position, ITT again fails to carry its burden since there is no showing that the existing formula is inequitable or that its recommendation is now equitable.

It must be remembered that when the formula was prescribed in 1943 by the Commission, it was found to be not only just, reasonable and in the public interest but also equitable. It is noteworthy that no carrier formally complained to the Commission from 1943 to 1964 concerning the equity of the formula nor did the Commission on its own motion seek to change it. Consequently, ITT has the burden of showing the change in conditions which now makes inequitable a formula prescribed by the Commission and indisputable equitable for 20 of the last 30 years.

ITT has not carried this burden. Only by defining equity as encompassing ITT's interest alone can it argue that its change in the formula would be equitable. But the term's meaning is much broader. It does not include just the interests of a single carrier but rather all of the carriers receiving traffic under the formula. In this respect, the Commission must consider as part of the equities involved that RCA Globcom has carried traffic under the formula for 30 years. We have provided unsurpassed

quality of service to the public. In return, we have relied on the revenues that have accrued from this traffic to support the message telegram segment of our business. To suddenly change the formula so that a significant portion of those revenues are taken away would be grossly inequitable.

On the other hand, ITT's argument for even more revenues cannot be viewed with the same concern by the Commission. ITT has received more total telegram traffic over the past 30 years than was originally envisioned under the formula. Today its overages are in excess of $24.6 million. This is excess benefit already received by ITT by virtue of the operation of a formula it labels "inequitable". Once having received more than envisioned, ITT should not be heard now to state that equity demands even further amounts to be transferred from the other carriers to ITT.

The Commission Cannot Lawfully Prescribe A New Formula Without The Information To Be Developed By The Western Union Statistical Study

The Commission has already recognized that neither the carriers nor the Commission itself has the data base necessary to answer the issue calling for statistical data on the present distribution of traffic under the formula. See Memorandum Opinion and Order, Docket No. 19660, FCC 74-565, adopted May 30, 1974. The causes for this lack of data have already been described in our prior

letters, comments and reply comments in this proceeding. Briefly, it results from the fact that unrouted traffic statistics are not reported in those situations where a single carrier receives all of the unrouted traffic to a single destination.* Accordingly, the unrouted data to many countries is not known by the Commission.

The lack of an unrouted data base will be remedied by the statistical study financed jointly by the international record carriers and undertaken by Western Union. This computerized study will provide the actual distribution by origin for unrouted traffic for all of the countries to which traffic is distributed. However, the statistical study will not be completed until approximately the beginning of 1975.

While it is unfortunate that the statistical study is not available at this time, the Commission must recognize that it would be unlawful for it to act before the facts on the distribution under the formula are known. For only after the Commission has these ascertainable facts on the distribution of unrouted traffic will it be in a position to forecast the effect of any change in the formula.

The Commission has recognized the importance of the effects of a change in the formula on the carriers in the very issues

---

* In addition, the International Quota Bureau has acknowledged a defect in the data for those countries where proportional distribution is made.

which it designated for hearing. Thus the parties were required to address the following issue:

> The specific amendments which should be made to the formula to remove each such defect, the effect each such amendment will have on respondent, other international record carriers, and on the quality of service provided to and the rates charged the using public. (Emphasis added).

This issue merely states explicitly one of the most significant considerations that the Commission must address in evaluating the lawfulness of a new formula. It is inherent in the statutory framework of Section 222(e)(3) that the effects of a change on the carriers must be considered. The failure to ascertain these effects and make findings concerning them would be contrary to the Administrative Procedure Act, established case precedent, as well as the Communications Act.

As RCA Globcom has previously demonstrated to the Commission, Section 222(e)(3) requires an oral, evidentiary hearing rather than a paper rulemaking one. Section 557 of the APA would thus require that the Commission issue a decision showing its findings and conclusions and the reasons or basis therefor. It is obvious that the Commission could not issue findings on the effects of a change in the distribution of traffic under the formula since there are no reliable statistics on the subject. Nor could the Commission reach supportable conclusions without facts.

But while it is important that RCA Globcom is entitled to an oral evidentiary hearing, this fact does not affect the Commission's obligation to base its decision on a sufficient factual basis. In City of Chicago v. Federal Power Com'n, 458 F. 2d 731 at 743, (1971), it was decided that the nature of the courts review "depends not on whether the Commission has issued a rule or an adjudicatory order, but on the nature of the record presented" for review. The court went on to state that whether rulemaking or adjudication, "a primary objective is the acquisition of information which will enable the Commission to carry out effectively the provision of the" enabling statute. Id. at 744.

The basic principle that supporting facts are needed has been well established in the courts. In the Permian Basin Case, the Supreme Court held that judicial review of the Federal Power Commission's orders will function accurately and efficaciously "only if the Commission indicates fully and carefully the methods by which, and the purposes for which it has chosen to act, as well as the consequences of its orders for the character and future development of the industry." 390 U.S. 767 at 792, (1968) (Emphasis added). While this decision was issued in the context of a rate of return proceeding, the principle yields the same result when applied to the instant case.

Other courts have also held that the lack of information may be so pervasive that the court cannot determine whether an agency

order comports with the requirements of the agency's enabling statute. See Public Serv. Com'n, State of N.Y. v. Federal Power Com'n, 487 F. 2d 1043 (1973). In these cases, the courts have either reversed or remanded the agency order.

Conclusion

On the basis of the comments already before the Commission, we submit that there is more than adequate support for determining that the existing formula continues to operate in the public interest and is lawful in all other respects. Therefore, the Commission can properly issue a decision at this time affirming the existing formula. However, should the Commission nevertheless determine that the present formula should be changed, it cannot prescribe a new one until it has the facts essential to support the conclusion that such new formula would meet the statutory standards set out in Section 222(e)(3). These facts will not be in existence until the completion of the Western Union statistical study. Therefore, the Commission should either issue a decision affirming the lawfulness of the formula or wait until the completion of the Western Under study, and until the carriers have had time to comment on the conclusions of that study, and thereafter issue its decision.

Respectfully submitted,

REPLY OF ITT WORLD COMMUNICATIONS INC.

ITT World Communications Inc. (ITT Worldcom) hereby replies to the responsive comments filed on August 16, 1974 in the above referenced matter respecting revision of the International Formula. In addition to those of ITT Worldcom, responsive comments were filed by RCA Global Communications, Inc. (RCA Globcom), Western Union International, Inc. (WUI), TRT Telecommunications, Inc. (TRT), and Western Union Telegraph Company (Western Union).[1/]

By and large these responsive comments were simply reiterations of previously stated positions and arguments and have already been adequately answered. A few points do, however, merit further comment. In its Comments hereafter, ITT Worldcom will show the

---

1/ Informational Comments were also filed, at the request of the Commission's Staff, by the International Quota Bureau (IQB).

following:

(i) Despite the creation of a smoke screen of trivial and irrelevant "public interest" arguments by RCA Globcom and WUI in hopes of salvaging their special interests from the existing Formula, it remains clear and apparent that this Formula fosters severe inequities and is otherwise unjust and unreasonable, and is therefore unlawful; the Formula must be revised.

(ii) Notwithstanding its protestations of equality of treatment, WUI clearly enjoys a substantial competitive advantage through its "exclusivity" arrangement for unrouted traffic filed in certain Western Union gateway offices; that arrangement should be terminated.

(iii) RCA's claim of a compensable right to "its" accumulated deficiencies, which has already been shown to be baseless, is completely destroyed by recently discovered statistics showing a net gain in market share for RCA over the life of the existing Formula.

(iv) The change of position by TRT, to advocacy of an equal distribution of unrouted traffic among carriers, may serve TRT's self-interest, but the Section 222 criteria and the public interest are better served by a Formula which allocates unrouted traffic in proportion to routed traffic.

(v) No oral hearing is required in this proceeding because, as previous pleadings make clear, there are no material facts in dispute.

COMMENTS

I. Both RCA Globcom and WUI have predicated their arguments, aimed at preserving their self interested positions in the existing Formula, largely on the twin premises that (1) the existing Formula must be found

to be seriously in conflict with the "public interest" and (2) that any revised Formula must provide substantial public benefits not found in the existing Formula, before a new Formula may be prescribed by the Commission. This "standard of convenience" urged by RCA Globcom and WUI must fail as a measure of the lawfulness of the Formula because:

(1) The concept of the "public interest" has been contorted by both RCA Globcom and WUI into a diminutive embracing primarily those carriers' own private interests; and

(2) The perspective urged by RCA Globcom and WUI seriously conflicts with the criteria established by Section 222 of the Communications Act for judging the lawfulness of a given Formula.

Based on the comments of RCA and WUI, one would be left with the impression that the "public interest" basically encompassed only two criteria: (1) the preservation of the revenue share derived by RCA and WUI from the existing Formula; and (2) the relative frequency of complaints leveled against a given Formula. Thus, both of those carriers construct a "public interest" which would oppose a Formula revision that caused a transfer of revenue from themselves to other carriers participating in the Formula. This same "public interest", however, easily countenances the continued maintenance of a Formula which unfairly and unjustly deprives other carriers of an equitable share of the unrouted traffic, and revenue therefrom, extra revenues which are

received by RCA and WUI. Moreover, the argument which each carrier makes, that the only effect occurring from a revised formula would be a revenue shift and thus that such a revision would not be in the public interest, is refuted by simple examination of the existing Formula and its history. Each carrier, for example, argues that the existing Formula establishes no disincentives to competition. ITT Worldcom has already shown in prior comments that, notwithstanding some fairly vigorous competition among the carriers, the existing Formula does create serious disincentives to competitive enterprise (which competitive enterprise the Commission has repeatedly found to be in the public interest). Indeed both RCA and WUI tacitly concede that competition has been lessened by the existing Formula in their arguments extolling the virtue of this Formula as having reduced duplicating efforts and facilities. 2/ Such a reduction of competitive effort, where occurring, likely reduces quality

---

2/ In this same context it is noted that WUI argues, at page 8 of its responsive pleading, that the Formula does not operate as an anti-competitive market sharing device, while at page 10 of the same pleading in attempting to rationalize the cumulative imbalances which characterize the existing Formula, WUI urges that these imbalances merely indicate areas where it has not been practicable to preserve the "precise market share originally designed".

of service to the public as well; rather unlikely, however, is that such a reduction in competition resulted in any comparable cost reduction, given the scope and scale of each of the carriers operations.

In support of its "public interest", RCA has also urged that the lack of complaint by ITT Worldcom for the first 20 years of the Formula's operation shows that the Formula was in the public interest for all of that period; RCA then urges that nothing has changed in the Formula operation during the last 10 years and therefore it is still in the public interest. Somewhat similarly WUI urges that since the Formula has mechanically worked for almost 30 years and since no member of the public has ever complained about the Formula, it must be in the public interest. 3/

The mere fact of resort by these carriers to arguments of such inanity and irrelevancy eloquently illustrates the complete lack of merit in the positions which they have urged here. WUI's argument that the Formula mechanically works and is thus in the public interest is repeated from a previous pleading and has already been refuted by ITT Worldcom.

3/ WUI also suggests that the Commission has had the Formula under examination on several occasions during its 30 year life and has never seen fit to require any substantial revisions. An examination of the cases cited by WUI in support of this proposition show however that in no case was the lawfulness of the conceptual basis of this Formula at issue. Instead the cases involved interpretation of the Formula, or changes in the Formula to fit changed circumstances (divestment of WU Cables), or simply changing the landline divisions of charges.

Moreover, it can hardly be surprising (or relevant) that no member of the using public has ever complained against the Formula. That public is almost certainly completely unaware that such a Formula even exists. Except as to quality of service, that public is largely unaffected by the Formula, and even with respect to quality of service, the public has no awareness of the effect.

Finally, even assuming a relevancy between the frequency or timing of carrier complaints and the lawfulness of the Formula, there have been numerous informal complaints made with respect to the Formula through its history, largely through the medium of the International Formula Committee. Moreover, the Commission itself expressed concern in the early 1950's about problems with the Formula,[4/] but the carriers, believing then that the problems stemmed largely from the lack of divestment of the Western Union Cables Division, urged that course on the Commission rather than an investigation of the Formula at that time. By Order of March 5, 1952, the Commission instituted an investigation to determine what was delaying the divestment of the WU Cable Division (Docket No. 10151, 25 F.C.C. 35), a proceeding which ultimately brought about divestment in 1961 (30 F.C.C. 323). Three years later in November 1964, ITT Worldcom filed its formal complaint with respect to this Formula.

4/ FCC letter dated November 28, 1950, reference 19520, addressed to all interested carriers under the "International Formula"; carrier responses to this letter were filed on February 28, 1951.

Aside from the tortured nature of the "public interest" urged by RCA and WUI, those carriers arguments also must fail for simple inconsistency with the criteria of Section 222 of the Act. Contrary to the impression which RCA and WUI attempt to create, the measure of lawfulness of a given Formula is not solely whether it comports with the public interest. Pursuant to Section 222, a Formula to be lawful must be just, reasonable, equitable and in the public interest. Indeed, from the context in which these criteria are expressed and from the legislative history of Section 222 it appears that the "public interest" criteria is actually subordinate to, or largely defined by the criteria "just, reasonable and equitable."[5/] ITT Worldcom has previously shown that the existing Formula produces serious inequities in the distribution of unrouted traffic, inequities which stand unchallenged. In fact, both RCA and WUI have

---

5/ While the criteria for determining whether a given Formula complied with the Congressional objectives was apparently never subjected to serious debate, the limited references to the distribution concept were consistently expressed in terms of such distribution among the international carriers being "fair" and "equitable" . See for example, Report of Senate Hearings on S. 2445, p. 18, 77th Congress, 2nd Session; Report of Senate Hearings on S. 2598, p. 25, 77th Congress, 2nd Session; Report of Senate Committee on Interstate Commerce to Accompany S. 2598, 77th Congress 2nd Session; and Report of Senate Committee on Interstate Commerce pursuant to Senate Resolution 95, pp. 22,25, 77th Congress, 1st Session.

studiously avoided even any reference to the "equitable" criteria from Section 222, as if by ignoring the inequities in the existing Formula, they could somehow "wish away" this monumental flaw in their argument.

Note should be taken here of WUI's argument that a revision of the Formula and attendant shifting of revenues between carriers might force a carrier losing revenue to propose a rate increase. This position completely ignores the fact that this is a competitive market and that, as a competitive necessity, all carriers will match the lowest rates in the market. It is an economic fact of life that all competing carriers are not uniformly efficient or uniformly successful at marketing their services.

It is not the function of the Formula to divert traffic from a carrier which is more efficient or more successful in the marketplace, or to a less efficient or less successful carrier. Indeed, a revised Formula which complemented the role of competition in the marketplace would provide a strong incentive for a carrier losing traffic (and revenue) to improve its service to the public thereby attracting more traffic and revenue, and/or improving the efficiency or its operation thereby reducing costs. In either case, the public interest would clearly be served.

It should be noted also that ITT Worldcom has already pledged to the Commission to use any increased revenue it may receive from a revision of the Formula to offset potential cost increases from higher

landline divisions for Western Union and thus to maintain low rates for a service that does not appear to have substantial growth potential.

II. In arguing for rejection of ITT Worldcom's proposal that WUI's exclusive traffic arrangement at Western Union gateway offices should be terminated, WUI urges that this exclusive arrangement does not constitute a competitive advantage[6/] because:

(1) it must pay a landline charge to Western Union for each gateway message picked up by Western Union while the other IRC's do not pay this charge for messages picked up at their own offices; and

(2) it receives all unrouted international messages filed at Western Union offices at only three locations in Manhattan, while ITT Worldcom maintains 10 offices and RCA Globcom has 14 offices.

As to WUI's first point, that of the landline charge which it must pay for gateway messages, it conveniently ignores the other half of this picture; the IRC's which maintain their own offices incur costs for doing so, which, at least in ITT Worldcom's case, are roughly comparable to the existing Western Union landline charges. Moreover, while WUI may not enjoy a major economic advantage through its exclusive access to Western Union gateway offices, it enjoys a huge

---

6/ It is noted that while WUI claims not to enjoy any advantage from its exclusive privilege at Western Union gateway offices, it certainly does not seem particularly interested in terminating this non-advantageous relationship.

competitive advantage by receiving all unrouted international messages filed with Western Union, even though the customers did not intend to have such messages routed via a particular overseas carrier. Of course, that arrangement lends support to the mistaken notion held by many members of the public that WUI and Western Union are affiliated entities.

As to WUI's second point, that of 3 Western Union gateway offices to which it has access versus 10 and 14 offices for the other IRC's, it again leaves out an important point. The three Western Union offices to which WUI has exclusive access (for unrouted messages) are consolidated offices providing much broader coverage than the individual offices of the other IRC's, a consolidation which was approved by the Commission as serving the public interest.[7/] Because of the consolidated nature of these Western Union offices and the fact of WUI receiving 100 percent of the unrouted international traffic filed at these offices, it is quite likely that WUI is receiving more traffic at these offices than either RCA Globcom or ITT Worldcom[8/] receive at their branch offices.

7/ See The Western Union Telegraph Co., Consolidation of 22 Public Telegraph Offices, 37 F.C.C. 2d 813 (1972)

8/ This fact will be confirmed upon receipt of the study presently being conducted by Western Union of all Formula traffic.

Finally, WUI has inferentially suggested the possibility of closing all IRC gateway offices with all international messages being filed through Western Union offices. Under present conditions ITT Worldcom would be very much opposed to such a concept. The level of competition and the quality or range of services to the public would be adversely affected. Even assuming the complete elimination of WUI's exclusivity privilege on unrouted traffic, which it has not conceded, WUI would enjoy an enormous competitive advantage in routed traffic because of its name association with Western Union.

III. In its response RCA Globcom has not refuted, nor even addressed, the compelling arguments against its position that it had a compensable right to the accumulated deficiencies associated with its Formula position. Hopefully it has realized the untenable nature of its position and abandoned same. Nevertheless, ITT Worldcom has discovered an inadvertent misstatement in its responsive comments addressed to this RCA position, which it desires to here correct. At page 13 of ITT Worldcom's response, it urged that RCA had acquired no equitable right to compensation for an accumulated deficiency because, inter alia, the loss in market shares which it had suffered over the life of the Formula resulted simply from its inability to maintain, in a competitive marketplace, the market share which it had enjoyed in the 1940's. This point was based on the

assumption that the large accumulated deficiencies associated with RCA's Formula position must reflect a loss in market share over the life of the Formula, since the Formula was designed to maintain market shares constant. Nevertheless, as a check, which unfortunately was not completed prior to filing the response, an examination of IQB Reports was made to ascertain the overall market share statistics for each carrier at the beginning of Formula operation and for 1973.[9/] These statistics revealed that, even though accumulating very large deficiencies throughout the history of the Formula, RCA had, in fact, enjoyed a substantial gain in its overall share of the international telegraph message market.[10/] This fact not only provides further evidence of the unjustness and unreasonableness of the existing Formula, but

---

9/ It was not practicable to use the statistics for the years prior to 1949 because of two factors: (1) the unsettled conditions during and just following the War which resulted in numerous subareas not receiving any traffic in the early years of the Formula, and (2) RCA did not begin reporting to the IQB, statistics on its gateway traffic to Areas A and B, which traffic was excluded from the Formula, until 1949.

10/ In 1949 RCA received 33.39% of the total international gross international tolls (GIT), including schedule B and the RCA gateway traffic to Areas A and B which was excluded from the Formula. In 1973 RCA received 40.05% of the total international GIT's, on the same basis. Also of note, AC&R, with a large accumulated overage, saw a net decline in market share of approximately 3.5 percentage points.

also completely destroys any claim of equitable right which RCA would make for compensation for "its" deficiencies.

IV. In its responsive comments TRT has largely reversed its original position and now urges as its preferred position that unrouted traffic be distributed equally to all carriers tariffed to serve a particular point, and as a fallback position suggested distribution in proportion to routed traffic with all gateway routed traffic excluded from calculation. While an equal distribution of unrouted traffic among carriers may have some administrative advantage in terms of simplicity, it bears no relationship to logic or to any of the criteria of Section 222 for judging a given Formula. A distribution of unrouted traffic in proportion to routed traffic, as urged by ITT Worldcom, would be far more in keeping with the requirements of the Act and would further provide a clear and positive incentive for improved service as a carrier sought a higher share of routed traffic and concomitantly a larger proportion of unrouted traffic.

If, however, the Commission determines to use an equal distribution of unrouted traffic in revising the Formula, it must limit the carriers participating in the distribution for a given destination to those which have authorized direct circuits to such destinations. To base such a distribution on the simple expedient of a tariff filing would, as was

pointed at pp. 14-15 of ITT Worldcom's Response, largely nullify the Commission's determinations as to the appropriate degree of competition required to serve given destinations. It would also provide a substantial windfall to a carrier such as TRT, at the expense of carriers which the Commission has certified to serve particular points directly.

Finally, TRT's proposal that routed gateway traffic picked up by Western Union be excluded from a Formula based on distribution of unrouted in proportion to routed traffic is illogical, without foundation or justification, and should be rejected. Clearly there is no real difference between a routed messages filed with Western Union in a gateway and a routed message filed with that Company in the hinterland, since solicitation of routings is not limited to the gateways and since the charges to the customer are the same.

V. Both RCA Globcom and WUI have, in various correspondence and pleadings in this docket, urged, as a necessary procedural step in this investigation, the holding of an oral evidentiary hearing. An evidentiary hearing in a matter of this kind, where there exist no disputed material issues of fact, would be both unnecessary and wasteful of administrative process. The only purpose which would be served by such an evidentiary hearing would be a further delay in the ultimate resolution of these proceedings, favoring those carriers whose interests are served by the maintenance of status quo.

While there may have formerly been some lack of agreement among administrative agencies, and the courts reviewing decisions of such agencies, over whether an evidentiary hearing is required when no material issues of fact are raised, recent cases clearly support the view that neither due process nor a statutory requirement for a "hearing" mandate the holding of an oral evidentiary hearing when there exist no material issues of fact. This principle was illustrated in Producers Livestock Marketing Ass'n v. United States[11/] where the Court stated:

> "[I]t is fundamental to the law that the submission of evidence is not required to characterize 'a full hearing' where such evidence is immaterial to the

---

11/ 241 F. 2d 192, 196 (1957); affirmed 356 U.S. 282 (1958).

> issue to be decided...Where no genuine or material issue of fact is presented the court or administrative body may pass upon the issues of law after according the parties the right of argument." 12/

Similarly, in Sun Oil Co. v. FPC, 13/ the Court there, rejecting an argument that an evidentiary hearing was necessary, said:

> "[W]e do not think there was any fact question involved and hence no evidence would have been material. If the question was more than a question of administrative policy, and we doubt that it was, it was a question of law."

Numerous other cases are to the same effect. 14/ And the Commission itself has recently been upheld in a denial of an evidentiary hearing where the issues involved drawing inference from established facts - Anti-Defamation

---

12/ This point was followed by the D.C. Circuit in several later opinions. See Persian Gulf Outward Freight Conf. v. Federal Maritime Commission, 375 F. 2d 335 (1967); Outward Continental N.P.F. Conf. v. Federal Maritime Commission, 385 F. 2d 981 (1967); and City of Los Angeles v. Federal Maritime Commission, 388 F. 2d 582 (1967).

13/ 256 F. 2d 233, certiorari denied 358 U.S. 872 (1958).

14/ See, for example, Mississippi River Fuel Corp. v. FPC, 281 F. 2d 919 (1960), certiorari denied 365 U.S. 827 (1961); NLRB v. J. R. Simplot Co., 322 F. 2d 170 (1963); Birkenfield v. United States, 369 F. 2d 491 (1966); Midstate Hauling Co. v. Mason, 177 So. 2d 206 (1965); and NLRB v. Bata Shoe Co., 377 F. 2d 821, certiorari denied 389 U.S. 917 (1967).

League of B'nai B'rith v. FCC, 403 F. 2d 169 (1968), certiorari denied 394 U.S. 930 (1969).[15/]

A review of the pleadings and other materials heretofore filed in the Formula portion of this docket shows quite clearly that, unlike the companion Landlines case, where a carrier's revenue requirements are at issue, the Formula proceeding presents no disputed issues of fact. Even RCA appears to have largely conceded this point in its Response where, at p. 13, it states that completion of the traffic study presently being conducted by Western Union, with opportunity for comment on that data "would almost, if not entirely eliminate our concerns in this respect".

The Commission should reject arguments seeking an unnecessary evidentiary hearing in this matter and proceed to an expeditious determination of appropriate revisions of the International Formula.

CONCLUSION

ITT Worldcom and other carriers have, throughout the long history of this proceeding, shown beyond dispute that the existing International Formula is unlawful and must be revised. The case for such a revision

---

15/ It is also worthy of note that in the Storer case cited by WUI (U.S. v. Storer Broadcasting Co. 351 U.S. 192 (1956)) in support of its position that a hearing is necessary in this case, the Supreme Court there stated (at 205): "We agree with the Commission that a full hearing...would not be necessary on all such applications... We do not think Congress intended the Commission to waste time on applications that do not state a valid basis for a hearing".

is so compelling that those carriers seeking to preserve their self interest in the status quo have been reduced to arguing largely trivial and irrelevant points which must fail when weighed against the important, substantive considerations of law and policy, which favor revision of the Formula.

ITT Worldcom has proposed a revised Formula which would satisfy the statutory criteria, would be in the public interest, and would further the Commission's established policies supporting competitive enterprise. The Commission is respectfully urged to find that revision of the existing Formula is required and that a revised Formula along the lines proposed by ITT Worldcom should be adopted.

Respectfully submitted,

ITT World Communications Inc.

FEDERAL COMMUNICATIONS COMMISSION
WASHINGTON

In the Matter of	)	
International Record Carriers' Scope of Operations in the Continental United States, Including Possible Revisions to the Formula prescribed under Section 222 of the Communications Act.	)	Docket 19660

To: The Commission

RESPONSIVE COMMENTS OF WESTERN UNION INTERNATIONAL, INC.

Western Union International, Inc. (WUI) hereby replies to the responses of ITT World Communications Inc. (ITT), RCA Global Communications, Inc. (RCA), TRT Telecommunications Corporation (TRT) and the Western Union Telegraph Company (WUTelCo), all dated August 16, 1974.

The carriers proposing changes have now had several opportunities to demonstrate that there are defects in the international formula sufficient to justify interfering with a mechanism that has functioned well and efficiently for many decades. However, not one of the pleadings filed to date by ITT or TRT has given any concrete evidence whatsoever of defects in the formula, other than unsupported assertions using vague adjectives such as "outmoded", "inequitable", or "unreasonable". No carrier has provided any indication of exactly in what manner any of the carriers or the public are being damaged by the current operation of the formula.

In arguing that the formula is outmoded, the proponents of change, who have the burden of proof, have failed to show which features of the formula are "outmoded", and how such features adversely affect the public interest. In arguing that it is inequitable, they do not show the nature or extent of this supposed inequity, or which carriers are harmed. They do not show the volumes of traffic each carrier should receive if this "inequity" should be removed, nor do they explain the standards of fairness they have chosen. In arguing that the formula does not serve the public interest, they do not show which segments of the public have been damaged by the operation of the formula, nor in what manner, nor how this alleged damage would be eliminated by their proposals.

The only substantive argument advanced to show that the formula's operation is contrary to the public interest is the assertion that it provides "disincentives" - whatever they are - to providing better service for certain carriers in certain sub-areas where an increase in routed traffic would not result in a net increase in total traffic. In no way does this argument indicate a detriment to the public.

It is impossible for any carrier to distinguish among destinations so as to limit its efforts to improve its service to traffic destined to points where this "disincentive" does not apply, and leaving its service unimproved

for traffic destined to all other points. The computerized nature of carrier operations, not to mention the prohibition against discrimination contained in Section 202(a) of the Communications Act of 1934, would prevent such distinction.

Even if a carrier were able and willing to make such a distinction, the total amount of traffic to which this "disincentive" might apply is small. Attached hereto as Attachment A is a listing of carriers and sub-areas for which, based on traffic distribution instructions in effect at the end of 1973, a carrier would lose an unrouted message for every additional routed message obtained by that carrier. It can be seen that of a total of 8.4 million outbound international messages in 1973, only 1.9 million, or 23% would be subject to such a "disincentive". Obviously no carrier would jeopardize the vast majority of its traffic by permitting its quality of service to deteriorate simply on the ground that a small proportion of traffic would not be affected.

As WUI pointed out in its Comments, the public would be harmed by a change in the formula, if such a change resulted in a diversion of significant amounts of traffic, since the carrier losing traffic would be left with potentially substantial amounts of unused capacity. In reply, ITT argues that such carriers should have foreseen the change in the formula which ITT is urging, and therefore any purchase of plant to handle the traffic which such carriers were then actually receiving (but

might lose) was "imprudent". The argument is deserving of little consideration. Of course all carriers must acquire the physical plant necessary to meet the public's demand for service. It would have been highly imprudent for any carrier not to do so, on the speculative possibility of a formula change in the uncertain future.

Furthermore, ITT's argument assumes that which is to be proved: The mere filing of ITT's petition does not prove that the formula should or would be changed. In view of the fact that the public will not be benefitted in the least by the change in the formula that is proposed, it would have been illogical and imprudent for carriers to act on the assumption that ITT's petition would be granted.

In summary, no showing has been made that the formula is contrary to the public interest or is unfair, beyond sweeping and vague assertions. There is a total lack of hard evidence to support these self-serving assertions. Moreover, the data base has not yet been developed in order to gauge the effects upon the international carrier industry, and its component members, of formula revisions proposed by ITT and TRT. Since it is clear that service to the public will not be affected by the proposed formula revisions, the Commission should carefully consider whether its valuable time and resources would be better employed in areas where substantive accomplishments in the public interest are possible.

Accordingly, WUI recommends that this proceeding be terminated. Alternatively, WUI asserts its statutory right to "a full hearing" (replete with evidence submitted under oath, cross-examination, proposed findings, oral argument, etc.) which is a condition precedent under Section 222(e)(3) of the Communications Act to the invalidation of the existing formula and to the prescription of a revised formula.

Respectfully submitted,

REPLY COMMENTS OF
TRT TELECOMMUNICATIONS CORPORATION

At the outset, TRT believes that it is desirable to refocus on the essential aspects of this proceeding. Four US international record carriers (IRCs) compete for routed US outbound telegrams via their respective facilities; the remainder of US outbound telegrams are unrouted. What is required, then, is a just, reasonable, and equitable method which serves the public interest for distributing this unrouted traffic among the four IRCS. Because the operating arrangements between each IRC and the Western Union Telegraph Company (WU) are essentially identical, and due to the very nature of unrouted traffic, no IRC should be favored over another IRC in the allocation of unrouted traffic. The existing method for the distribution of unrouted message traffic has been conclusively shown to be unjust, unreasonable and inequitable, and not in the public interest; and it should, therefore, be changed.

With respect to proposed revisions to the Formula, ITT World Communications Inc. (ITT) argues in its August 16 Comments that only routed traffic handled over authorized direct circuits should be used in determining proportionate unrouted traffic to any destination. TRT believes that whether routed traffic is transmitted via direct or indirect circuits is not relevant in the determination of whether an IRC should be allowed to transmit unrouted traffic to any particular point. An IRC serving a destination on an indirect basis competes for routed traffic to that destination in the same manner as it competes for traffic to destinations it serves on a direct basis. Moreover, there are a number of destinations which all carriers serve only on an indirect basis. Consequently, to the extent customers express a preference for a particular carrier, and as an IRC is thus successful in obtaining routed traffic, that carrier should receive a share of unrouted traffic. To do otherwise would ignore the competitive situation among the IRCs and would unjustly favor some because of their more favored route structure. This would be particularly unfair to TRT.

In its August 16 Comments, ITT also suggests some confusion in interpreting TRT's position regarding the impact of gateway traffic on the distribution of unrouted traffic. TRT has suggested that all routed traffic handled by WU and transferred to the IRCs should be used in any formula for determining the allocation of unrouted traffic to each destination.

Had there been any flaws in the concept and operation of the formula, they would have been as apparent after 17 years of operation as after 30 years." (WUI Comments, Aug. 16, p. 4) However, the Commission's reason for not changing the Formula at the divestment proceeding was not as WUI asserts. The Commission stated in its November 26, 1973, Memorandum Opinion & Order:

> "In that proceeding we did approve amendments to the formula to reflect the fact that thereafter WUI (the divested WU Cable Division) would be an independent IRC with no connection to WU. However, since we noted that we had not been asked to overhaul the basic structure of the formula, we left that question to an appropriate proceeding." (p. 12)

Moreover, WUI overlooks the fact that ITT, a short three years after the divestment, did ask the Commission to review the Formula, pointing out the many inequities in the Formula.

CONCLUSION

TRT submits that the Formula should be expeditiously revised in accordance with the suggestions it has previously advanced.

Respectfully submitted,

REPLY

The Western Union Telegraph Company (Western Union) herein files its Reply to the responsive comments of ITT World Communications, Inc. (ITT), RCA Global Communications, Inc. (RCA Globcom), Western Union International, Inc. (WUI), and TRT Telecommunications, Inc. (TRT). In support thereof, Western Union respectfully shows as follows.

In its previous comments, Western Union has suggested that, at the minimum, a separate entity solely responsive to the international record carriers be formed to handle the distribution of unrouted message traffic. So far, no carrier has commented on this proposal, either pro or con. The only references made to Western Union's participation in this enterprise is to state what a good job we are doing and that all costs are borne by the international carriers.

No carrier has even responded to Western Union's call for simplification of the formula. As stated by ITT in its Response, "[a]dministrative simplification of the Formula as urged by Western Union is a desirable goal but specific approaches

may be unattainable or undesirable" (p. 17). Thus, if Western Union is to continue to distribute unrouted traffic, it appears that, at least as far as ITT is concerned, even administrative simplification is unlikely at the present time. Again, there appears to be no reason why Western Union must continue to play an active role in the distribution of unrouted messages.

Illustrative of the problems confronted by Western Union is a recent letter, dated July 30, 1974, of the International Quota Bureau directing that the distribution of cable traffic to Columbia, previously exclusively allocated to TRT, must now be divided between TRT, ITT (AC&R), and RCA. Since our computer has been programmed to automatically route Columbian traffic exclusively through TRT, the computer program must be altered and our Minneapolis operation must now manually allocate the traffic in accordance with the July 30 letter. Additionally, new facilities must be established between Minneapolis and the TRT operating center in Pearl River, Louisiana. As a result of this change, additional cost is being incurred by Western Union, and it is unlikely these costs will ever be recovered from the international record carriers. In addition, Western Union's personnel must devote their time to ensure the continued operation of the formula. This is but one example of the burden Western Union must assume in order to facilitate the distribution of unrouted messages.

Accordingly, we therefore urge the Commission to establish an entity completely controlled by the international carriers to distribute unrouted messages.

Respectfully submitted,

THE WESTERN UNION TELEGRAPH COMPANY

In the Matter of	
International Record Carriers' Scope of Operations in the Continental United States, Including Possible Revisions to the Formula Prescribed under Section 222 of the Communications Act.	Docket No. 19660 RM-690

SUPPLEMENTAL COMMENTS

RCA Global Communications, Inc. (RCA Globcom) hereby submits these supplemental comments on the issue of whether the existing formula under which distribution of outbound international telegrams is made is unjust, unreasonable, and inequitable, or not in the public interest. These comments are submitted in response to the Commission's Memorandum Opinion and Order of May 28, 1975 (FCC 75-617) which provided that the interested international carriers could supplement earlier submissions on the formula question in light of the completion of the statistical study performed by The Western Union Telegraph Company (Western Union) showing the exact distribution of all routed and unrouted international traffic originating on its system.

The main purpose for the Western Union statistical study was to provide a data base which would enable the

Commission to have before it sufficient reliable information so that it could take into account the effects on the international carriers of any proposed change in the formula before it acted. Thus RCA Globcom's concern when it first suggested the need for such a study was that changes in the formula such as suggested by ITT World Communications Inc. (ITT) and TRT Telecommunications Corporation (TRT) would upset the basic theory on which the formula was based and lead to a very large and arbitrary shift of revenues from one or more carriers to other carriers without giving any concommitant benefit whatsoever to the public through improved service or lower rates. It was felt by RCA Globcom, and the Commission apparently agreed, that a data base permitting evidence on the effect on the carriers of a change in the formula was an integral part of the information it needed before it could make any determination that the public interest required the original formula to be changed.

As can be seen from the attachments to these comments, RCA Globcom has made a thorough analysis, using the Western Union derived data, to compile an accurate summary of the effects of the ITT and TRT proposal on RCA Globcom. This

analysis and the associated comments show that both proposals for redistributing the unrouted traffic suffer from serious defects which render them unsuitable as a basis for a change in the formula even under the assumption that the Commission found a public interest basis for the revision of the original formula.

RCA Globcom is also again asserting its right to have an oral, evidentiary hearing in the event that the Commission determines the existing formula should be changed. As detailed below, this question is of such a far-reaching significance to the public and the carriers that the Commission should not act until it has sufficient expert testimony as to the benefits and detriments of all proposals.

The ITT Proposal

The ITT proposal would have all the unrouted traffic distributed to the international carriers having direct circuits to a country in proportion to the number of routed messages each carrier received from Western Union. Aside from the fundamental flaw that this method of distribution would inevitably increase sales expense of the carriers without benefit to the public, the ITT proposal is unworkable since it does not consider that

many countries are not served by direct circuits and fails to adequately define a direct circuit. As shown in attachment 4, over 103 destinations, to which 43,087 messages were sent during the 13-week study, are not served directly. Thus, for these countries, the ITT proposal would not provide a method of distribution for the 173,011 unrouted messages annually available.

As a result of this failure to specify the manner in which all unrouted traffic would be distributed, it was not possible to show the total effect of the ITT proposal on RCA Globcom. However, as shown on attachment 2, if the ITT proposal were to be implemented, the redistribution of existing traffic, with the exception of the traffic to those countries just noted, would result in a gross international tolls (GIT) loss to RCA Globcom of approximately $1,990,595 per year. Of course, this loss in revenue is based only on the routed and unrouted outbound traffic figures derived from the Western Union study. It does not include a consequent decrease in revenue from the loss of an approximately equal amount of inbound traffic. The Commission must expect that in view of the magnitude of this loss to RCA Globcom, a very heavy increase in sales effort would be made by it to secure additional direct routings in the hope of offsetting the loss.

But in addition to this incentive for increased sales effort by RCA Globcom, the "multiplier" nature of the ITT proposal, i.e. the large unrouted telegram pool distributed in proportion the routed traffic secured by a carrier, would by itself generate additional sales effort by all the carriers. The consequent rapidly escalating selling costs on the part of the IRCs would in due course greatly impact the telegram using public. The results of the multiplier effect of the ITT proposal can best be understood by examining the amount of revenues that would be open to solicitation by the IRCs and the nature of the costs that would be incurred by them in handling the traffic originated by Western Union.

As to revenues, based on the Western Union 13-week study and other statistical source material available to the Commission, it is estimated that the IRCs interchange about 6.6 million telegrams annually with Western Union and receive about $10.3 million in annual revenues therefrom. The outbound routed traffic is estimated to be 842,000 telegrams:

	Telegrams		Estimated
Outbound	Number	%	IRC Revenues*
Routed	842,000	13	$ 1,305,000
Unrouted	2,740,000	41	4,552,000
Subtotal	3,582,000	54	$ 5,552,000
Inbound	3,051,000	46	4,729,000
Total	6,633,000	100	$10,281,000

*This revenue calculation is based upon an assumed average U.S.

(continued on next page)

As the table shows, there are now more than three unrouted outbound telegrams for each routed outbound telegram.

In this connection, it should also be noted that most overseas administrations return traffic to the United States IRCs more or less in proportion to the traffic they receive from the United States IRCs. Even in those few cases where the U.S. carriers have their own overseas offices, the long recognized "message for a message" theory generally prevails, meaning that it is easier for a carrier serving both ends to solicit the return traffic from an addressee if it delivers the original to him.

The combination of the fact that each routed message brings with it three or more unrouted messages and the fact that inbound traffic largely follows the carriers' proportion of total outbound traffic produces the multiplier effect, so that the revenue benefit from securing a single routed message is generally seven or eight times the revenue from that

---

(continued from preceeding page)

revenue of $3.80 per telegram of which WUD receives approximately $2.25 (9.5¢ basis) and the IRCs receive the balance. For the purpose of this table, it is assumed that the average U.S. revenue of the IRCs is $1.55 per telegram interchanged with WUD for both directions combined, although it is probable that subsequent to the recent devaluations of the U.S. dollar, the IRCs retain somewhat less than $1.55 per outbound telegram and receive somewhat more than that per inbound telegram.

single message.

On the cost side an understanding of the handling of outbound messages originating on the Western Union system is necessary. After the initial acceptance of a message is performed by Western Union, the transfer of the messages to the IRCs is made on an electrical basis. The receipt and retransmission of this traffic by the IRCs is highly automated through the use of computer switches and various transmission facilities.* The IRCs provide extensive and costly plant such as computer switching, cable and satellite facilities and accordingly their part in the overall acceptance-to-delivery process applicable to telegrams originated or terminated by Western Union is highly capital instensive with relatively little variable operating costs per message.

The following crucially important conclusion stands out from the foregoing discussion. In terms of classical textbook economics, a given IRC's solicitation efforts would quickly tend to expand until the marginal solicitation cost expended per routed message received from Western Union approached the total revenue that the IRC received not only from that routed message but also from up to six or seven additional outbound and inbound messages. This is so since the variable

*Of course, for messages originating with the IRCs the initial handling is performed by them rather than by Western Union and such carriers bear the acceptance costs incurred.

operating costs per message are minimal and the potential revenue increase through the multiplier effect is as described above.

Of course, an IRC may be constrained in its selling effort to some extent by the assumption that its competitors would also be increasing their own selling efforts, but there is now no way of knowing at what point such a constraint would develop if at all. It may be noted from the table above that the total revenue now received by all of the IRCs from routed outbound telegrams originated by Western Union is only about $1.3 million annually. However, it is vitally important to consider that even under the present formula, which intentionally discourages excessive solicitation, the amount spent by the IRCs for solicitation of routings probably exceeds their total revenue of $1.3 million from routed outbound traffic. If the IRCs are now apparently willing to spend approximately as much on soliciting routed outbound traffic as the entire revenue they now receive from such traffic, how much more could the Commission expect they would spend on solicitation if it condoned the multiplier principle and thereby caused the entire $10.3 million annual revenue pool to be distributed more or less in proportion to solicitation effort?

We believe it is very important for the Commission to

realize that the adoption of the ITT proposal with its irrational multiplier effect, which would lead to rampant and costly solicitation effort as described above, would be without precedent in all regulated industry practice. Clearly such a radical departure from traditional regulatory concepts should not be made without every assurance that such action will not have an adverse effect on the public.

We believe that this again demonstrates the validity of the user-oriented logic of the original formula. As noted in prior comments, the Commission recognized that the formula would create a certain disincentive to undue solicitation effort for routed traffic. Thus it stated in the Western Union Merger Proceeding that the combination of routed, unrouted, and self-originating traffic

> diminishes the incentive of the international carriers to expend effort and revenues in attempts to divert traffic from each other by solicitation efforts which may not improve quality of service; and it also diminishes the necessity for these carriers to build up additional facilities for the collection of their own traffic, in duplication of existing facilities of the merged company. These savings should contribute to a more efficiently and economically operated international telegraph system. 10 FCC 184, 191 (1943).

While the Commission wisely wrote this over thirty years ago, the basic finding that the savings would contribute to a more efficient and economical telegraph system remains

as true today as in 1943 and has not been refuted by ITT or TRT.

TRT Proposal

TRT has submitted two different proposals. First, it states that the most equitable method of distribution would be to divide all unrouted traffic equally among all the carriers tariffed to serve a given destination. Second, it apparently recommends that, as an alternative, the unrouted traffic should be distributed among those carriers tariffed to serve a given location in proportion to the routed traffic originating on the Western Union system received by a carrier.*

As to the first alternative, we believe that its so obvious that the method was selected only to benefit TRT, that serious attention need not be paid to it. It would be most inequitable to give TRT an equal share of the telegram traffic to all locations in view of its very small present or historical volumes to those places. Indeed, such a method would constitute an outright windfall to that carrier without any justification. Moreover, not only would such a proposal

*It is not clear from the TRT comments whether it meant to exclude from the second option those routed messages originating on the Western Union system in gateway cities or to exclude such messages. Taken as a whole, its three rounds of comments appear to support the former interpretation and accordingly our calculations have used this approach.

provide TRT with a bonanza of unrouted traffic but would also ostensibly give other limited franchise carriers as United States-Liberia Radio Corporation and French Telegraph Cable Company the same right also to get an equal share of the unrouted traffic.

The second TRT alternative, while appearing to be a slight modification of the ITT plan, is considerably different. In fact, it would give any carrier tariffed to serve a given location, unrouted traffic in proportion to the routed traffic originating with Western Union handled by that carrier. As compared with ITT's suggestion, the modification by TRT would, in addition to presenting the incentive for excessive sales expenditures, acts against the interests of the United States carriers as a whole since carriers with indirect circuits would retain proportionately less revenue than those with direct circuits. Inasmuch as traffic sent via indirect routes requires a greater out-payment to the foreign correspondents than with identical traffic via direct circuits, the more traffic that is artificially designated to go to a carrier without a direct route, the greater would be the loss to the United States, the international record carrier industry, and the telegram filers.

RCA Globcom estimates it would lose approximately $3,000,000 of outbound GIT per year under the TRT plan. Thus we submit that the Commission should if it makes any change in the existing formula, refrain from modifications which would operate in the manner just described.

Office of Telecommunications Draft Report

While the above suggestions are the only ones raised to date formally by any of the carriers interested in the formula, it should be noted that a draft report prepared by the Policy Support Division of the Office of Telecommunications, U. S. Department of Commerce* (OT), which was distributed to the international carriers, recommended that the Commission require all traffic originating on the Western Union system be routed by the sender. This proposal would eliminate the unrouted traffic by forcing the originator of a telegram to select an international carrier.

---

*The OT report is prefaced by the following notation:

> These papers result from a continuing effort to maintain total awareness of activities of interest to, of affecting, telecommunications, and to explore all alternatives to present and contemplated systems and issues. They are reproduced to stimulate discussion of new ideas, to provide data, or to supply background information about various topics related to telecommunications and telecommunications policy. They do not necessarily represent completed studies or official positions, either of the authors, the Policy Support Division, the Office

(continued on next page)

In addition to creating all of the same problems with respect to mounting sales expense which would soon increase rate levels, the proposal would provide an unjustified advantage to Western Union International, Inc. by virtue of the similarity of names between Western Union and Western Union International. In the period since the divestment and the attendant formation of Western Union International, we have routinely and repeatedly experienced a condition in the U.S. communications marketplace of customer confusion with respect to the separation of the organizations bearing the Western Union name.

The existence of confusion in the minds of customers and their inability to differentiate between Western Union International and the domestic company was substantiated by a market survey undertaken in January 1973 for RCA Global Communications, Inc. by Palshaw Measurement, Inc. of Southport, Connecticut. The survey was conducted among 1031 telex operators and communications managers in the gateway cities of New York, San Francisco and Washington, D.C., in the non-gateway cities of Boston, Chicago and Los Angeles and in 15 other non-gateway cities in order to test the respondents'

(continued from previous page)

of Telecommunications, Department of Commerce, or the Office of Telecommunications Policy. Instead they are working papers representing the current views of the responsible research team leaders preparing them.

awareness and attitudes toward three leading international telex carriers.

Tabulated results of the survey indicated that half (49%) of those respondents who said that "Western Union" was the carrier they used claimed that they meant the international carrier, but 40% didn't know whether it was the domestic or international carrier, 6% felt it meant both domestic and international carrier and 4% felt that it meant only domestic carrier notwithstanding that the original question addressed itself to international carriers only.

This difficulty experienced by the U. S. communicating public in differentiating between the domestic and international Western Union companies is fostered by the less than specific identification practices used by the domestic company for labeling its many thousands of customer telex machines. The photograph appendix as Attachment 11 shows a typical customer's machine. The face plate simply reads "Western Union." The side saddle paper is printed "Western Union Telex Service," the dial plate shows "WU Telex" and the service plate is headed "Western Union Telex."

The extent to which public confusion over the Western Union/Western Union International names impacts telex routings is indicated by the higher levels of participation

in hinterland telex originations enjoyed by Western Union International. Based on information and belief, Western Union International received approximately 38% of international telex traffic originated in the Western Union telex system in June 1974. In the same period, ITT received 31% of this traffic while RCA Globcom received 29%.

The foregoing situation exists notwithstanding the facts that (a) Western Union International was by no means the first carrier to enter the international telex market, (b) Western Union International's marketing and advertising expenses are not siginficantly higher than those of either ITT or RCA Globcom and (c) Western Union International's scope of telex operations (overseas points served) is not the largest in the industry.

Western Union International may argue that it enjoys its larger share of the Western Union Telex market because of claimed superior service. In this connection, it should be noted that Western Union International, with the same quality of service, provides only about 22% of the total international volume, a point that strongly establishes that

it would be grossly unfair to bestow on Western Union International the benefits of forced routing of internal telegrams.

It is not unreasonable to conclude, therefore, that public confusion vis-a-vis the Western Union name benefits Western Union International in the Western Union segment of the international telex marketplace. It is also reasonable to suggest that a similar benefit extends to Western Union International in the hinterland telegram market and, further, that this benefit would be greater if the International formula was abolished and all overseas telegrams had to be routed by the sender.

The impact of the suggested OT alternative to the existing formula must be viewed in the light of an accurate understanding of the hinterland telegram market place. During the period June 23 through 27, 1975, RCA Globcom made an analysis of all routed and unrouted telegrams transferred to it by Western Union. The results of this analysis showed that 57% of the unrouted traffic was of a social character. All of this traffic carried full addresses (not registered

code addresses) and full or no signatures. All messages were filed either by telephone (96%) or at Western Union public offices (4%). None were filed by telex or TWX.

The "social" segment of the marketplace is characterized by occasional and infrequent use of telegram service. Aside from its geographic dispersion, most of the social filers of telegrams do not use the service with sufficient frequency to form opinions as to the relative merits of the competing international services nor are they likely to be particularly interested in the fact that there are competing services.

Another pertinent finding of the previously-mentioned Palshaw Survey established (a) that slightly more than half of the telex operators surveyed were under 30 years of age and (b) that there appeared to be a high turnover among telex operators with the highest percentage having less than one year of experience and the weighted average number of years of service being 2.8. This finding suggests a need repeatedly to re-sell and re-educate hinterland customer staff whose unawareness of any carrier other than Western Union keenly determines the routing of both overseas telex and telegram traffic.

It must be recognized that the Commission in prescribing the formula has a definite obligation to avoid confusion arising in the minds of the public as to the carrier actually carrying its messages. Thus in the Western Union Divestment Case the Commission stated that "it would be inconsistent with our function as administrators of the act to permit circumstances to arise under which the public may be misled as to the carrier to which it entrusts its communications, particularly since this could operate to deprive competing carriers of traffic they might otherwise receive." 30 FCC 323, 344 (1961). Forcing filers to route all telegrams would by itself unfairly deprive RCA Globcom of traffic because of the confusion in the filer's mind between Western Union International and Western Union, especially in the hinterland.

REQUEST FOR ORAL, EVIDENTIARY HEARING

RCA Globcom has previously stated to the Commission that Section 222 (e) (3) requires that any change in the formula can be made only after the requirement for a "full hearing" has been satisfied by means of an oral, evidentiary hearing. See for example, RCA Globcom's letter to the

Commission dated January 15, 1974. In our later comments in this proceeding, we had stated it appeared that the completion of the Western Union statistical study would provide a sufficient factual basis to enable the Commission to proceed with a paper proceeding rather than an oral, evidentiary one. However, the very far reaching significance of the proceeding on the rates to the public and the effects on the carriers from any serious consideration which might be given either the ITT or TRT proposals now requires RCA Globcom to again assert its right to a full hearing. At such a hearing, RCA Globcom would intend to show, among other things, through expert economic, financial and marketing testimony the effect of the proposals suggested by ITT and TRT, as well as the OT draft report. We submit that only through an oral presentation tested by on-the-record cross-examination will the full significance of this essential testimony be made explicitly clear to the Commission. Without this full hearing, RCA Globcom and even more importantly the public will be denied the due process protection given by the statutory requirements of Section 222.

Information Submitted

In order for the Commission to make a complete evaluation of the ITT and TRT proposals, as well as supply the traffic statistics requested in the Commission's order, RCA Globcom is submitting the following information:

Attachment 1	-	Affidavit Of E.W. Peterson
Attachment 2	-	ITT Plan, Gain Or Loss To RCA Globcom
Attachment 3	-	ITT Plan, Redistribution Of Unrouted Transfers
Attachment 4	-	Destinations With No Direct Circuits
Attachment 5	-	Routed Messages For Destinations With No Direct Circuits For Individual Carriers
Attachment 6	-	Routed Messages For Destinations With No Direct Circuits For Any U.S. Carrier
Attachment 7	-	TRT Plan, Gain Or Loss To RCA Globcom
Attachment 8	-	TRT Plan, Redistribution Of Unrouted Transfers
Attachment 9	-	Messages Filed Directly With RCA Globcom By Destination
Attachment 10	-	Source Of Messages Filed Directly With RCA Globcom
Attachment 11	-	Photograph Of A Western Union Teleprinter
Attachment 12	-	Affidavit Of R. J. Angliss

CONCLUSION

RCA Globcom again urges the Commission to find that ITT and TRT have not shown that the existing formula is unjust, unreasonable, inequitable, and not in the public interest. Instead they have merely put forth proposals which will have such serious impact on the public that they could not possibly meet the statutory standards in Section 222 of the Communications Act. As shown above, the ITT and TRT proposals fail to meet these criteria inasmuch as they were designed only to benefit those carriers without consideration as to any public benefits they might have.

Respectfully submitted,

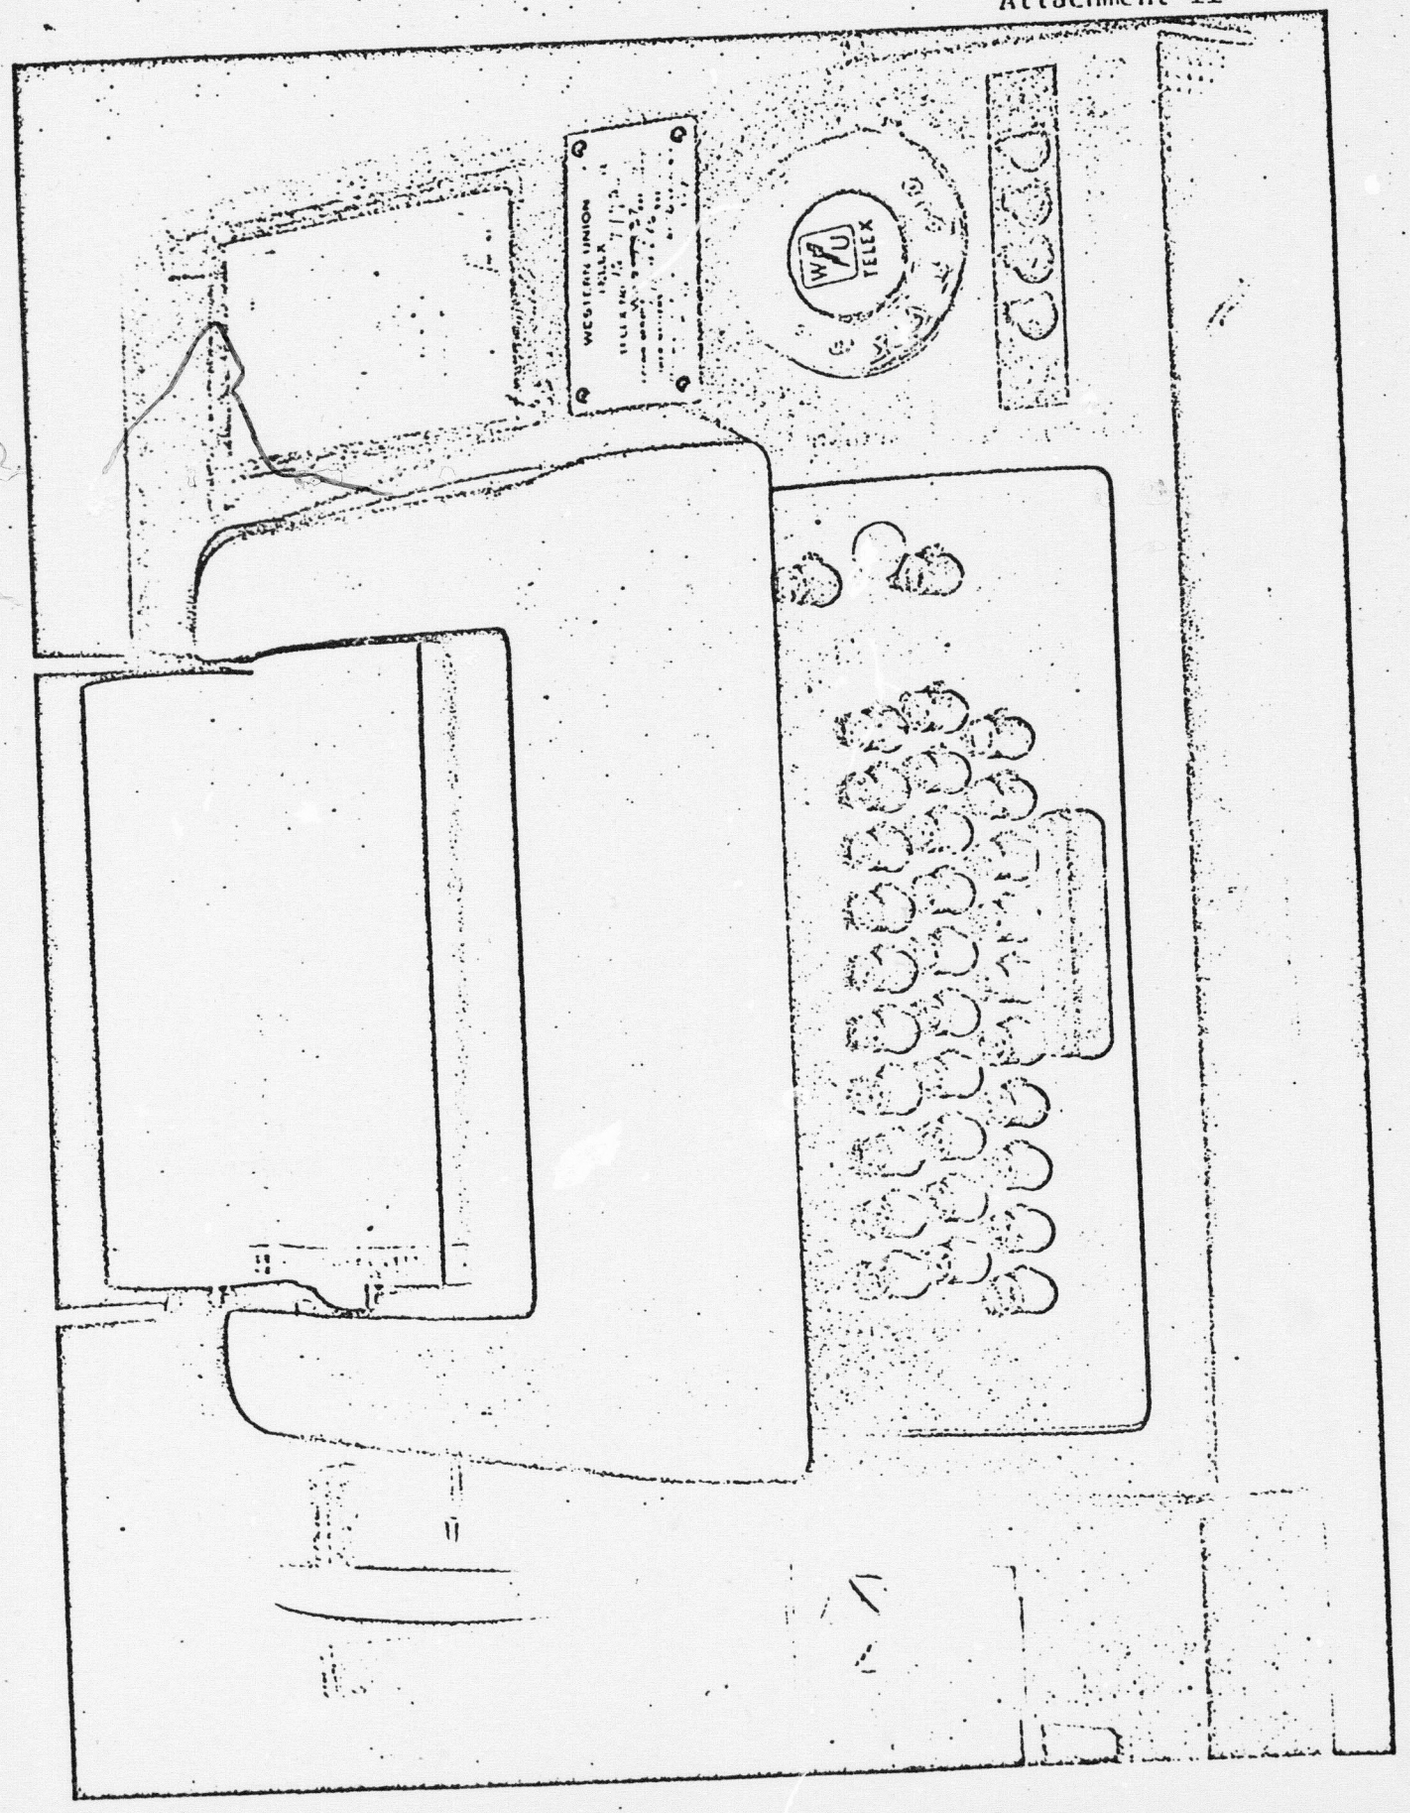
Attachment 11



AFFIDAVIT OF ROBERT J. ANGLISS

STATE OF NEW YORK)
) ss.:
COUNTY OF NEW YORK)

Robert J. Angliss, being duly sworn, upon oath deposes and states as follows:

I am Executive Vice President, Services, of RCA Global Communications, Inc. (RCA Globcom). As such I have responsibility for the marketing and sales of RCA Globcom's international telex and telegram services. I am familiar with the statements of fact set forth in that part of the foregoing "Supplemental Comments" dealing with the draft proposal of the Office of Telecommunications, U.S. Department of Commerce. To the best of my knowledge they are true and correct.

Robert J. Angliss

Subscribed and sworn to before me this 29th day of July, 1975.

International Record Carriers' Scope of Operations in the Continental United States, Including Possible Revisions to the Formula Prescribed Under Section 222 of the Communications Act	)	Docket No. 19660 RM-690

SUPPLEMENTAL COMMENTS
OF ITT WORLD COMMUNICATIONS INC.

ITT World Communications Inc. (ITT Worldcom) hereby submits its supplemental comments (pursuant to the authorization of the Commission's Memorandum Opinion and Order, FCC 75-617, (Order), released June 6, 1975, in the above captioned proceeding) addressed to the impact or effect upon the issues designated in this proceeding of the study of outbound international message traffic conducted by The Western Union Telegraph Company (Western Union).

In its Comments, Responsive Comments and Reply Comments[1/] in this proceeding, ITT Worldcom has already shown from a qualitative standpoint that the 30-plus year old International Formula with its quotas tied to 1942 (or earlier) market shares is sorely outdated and has for many years produced increasingly

---

1/ Dated July 8, August 16, and September 3, 1974 respectively

arbitrary and inequitable distributions of unrouted outbound message telegraph traffic. That Formula obviously does not serve the public interest and must be revised. Specifically, ITT Worldcom showed that the concepts in the present Formula of (1) fixed quotas tying both routed and unrouted traffic to 1942 (or earlier) market share; (2) accumulation and continued application of "overages" and "deficiencies"; (3) Schedule B, which is nothing more than a private market-sharing agreement; and (4) the designation of certain Western Union offices in gateway cities as offices of Western Union International, Inc. (WUI) are all seriously in conflict with the public interest and the formula mandates of Section 222 of the Communications Act and must be excised from the Formula. ITT Worldcom further urged that the revised Formula be based on the simple, and clearly equitable principle that unrouted traffic be distributed in proportion to the traffic specifically routed to a given carrier via its authorized direct circuits to a particular point.

While such a qualitative analysis establishes the unlawfulness of the existing Formula beyond reasonable doubt, the quantitative results from the Western Union traffic study do provide dramatic illustration of the unjust, unreasonable and grossly inequitable results perpetuated by that Formula.

EXISTING TRAFFIC DISTRIBUTION

The Western Union study analyzed all traffic transferred to the U.S. international record carriers during the thirteen week period beginning Sunday, December 1, 1974 and ending Saturday, March 1, 1975. The results of the Western Union study were reported separately for each of the thirteen weeks of the study. In order to make that data more readily usable for analysis and interpretation, the International Quota Bureau (I.Q.B.), on behalf of the participating international record carriers (IRC's), undertook to compile or summarize the thirteen weekly reports into a single report covering the three month (13 weeks) period. These IQB data were then arranged by ITT Worldcom so as to show, by carrier, a breakdown between routed and unrouted Western Union transfers for each destination (using IQB "Area" and "Subarea" classifications) and as between gateway and hinterland origins. A tabulation of this analysis is shown in Tables I (routed traffic) and II

(unrouted traffic) attached hereto.[2/] While the data in those Tables is largely self-explanatory, a few examples from those Tables will be highlighted hereafter for illustrative purposes.

Considering first the overall perspective (combined origins and total destinations), of the 687,568 unrouted messages transferred to the IRCs by Western Union during the test period, 11.4 percent went to ITT Worldcom, 48.4 percent to RCA Global Communications, Inc. (RCA Globcom), 37.9 percent to WUI, 1.4 percent to TRT Telecommunications Corporation (TRT), and 0.9 percent to United States - Liberia Radio Corporation and French Telegraph Cable Company combined (hereafter "Other"). Correspondingly, for the

---

2/ The level of destination analysis in Tables I & II is limited to Area and Overall totals. While these data are developed from an analysis of individual Subareas--those "work papers" will be available to the Commission or any party upon request therefor -- it is felt that inclusion in the Tables of the large volume of data from the Subarea analysis would likely add more "clutter" than clarity as respects the issues of this proceeding.

202,455 total routed messages[3/] transferred by Western Union to the IRC's, 34.2 percent went to ITT Worldcom, 31.7 percent to RCA Globcom, 28.5 percent to WUI, 5.3 percent to TRT, and 0.3 percent to other. Illustrated in tabular form the comparison would be:

Carrier	Unrouted Transfers		Routed Transfers	
	Messages	Percent of Total	Messages	Percent of Total
ITT Worldcom	78,557	11.4%	69,328	34.2%
RCA Globcom	332,359	48.4%	64,179	31.7%
WUI	260,538	37.9%	57,676	28.5%
TRT	9,774	1.4%	10,740	5.3%
Other	6,340	0.9%	532	0.3%
Total:	687,568		202,455	

These comparisons present a graphic picture of the unjustness and inequity produced by the present formula distribution. A carrier which has gained a "vote of confidence" from those

---

3/ Excluded from the routed traffic total are 8,098 messages filed in Western Union gateway city offices which are presumed by the Formula to be specifically routed via WUI. For purpose of this analysis, these messages can be roughly analogized to gateway "pickups" of the other IRC's and which, by definition, are not included in the Western Union "transfers".

users making a deliberate choice of carrier, greater than that of any other carrier, is "rewarded" by this formula with slightly more than 10 percent of the traffic not specifically routed by the sender, while the other two major international record carriers receive approximately 50 and 40 percent, respectively, of that traffic.

On an Area basis the comparisons are equally striking. 4/ Considering first Area A, 4a/ the 492,809 messages in the study period were broken down between routed and unrouted traffic

---

4/ Note should be made at this point of a judgmental allocation respecting the distribution between carriers of part of the unrouted traffic pool at the Area and subarea level, which was required due to a minor infirmity in the Western Union study. For the so-called "exclusive" unrouted traffic (i.e., all unrouted traffic to a particular point being given to a single carrier) which comprises about two-thirds of the unrouted traffic pool, distribution is handled through Western Union's central message processing computer at Middletown, Virginia, and this traffic is broken down to the same detail in the study as is the "prerouted" traffic. For the remaining "non-exclusive" unrouted traffic, however, Western Union's computer only recognizes the origin and destination, not the carrier via which the traffic is ultimately routed. Western Union also provided the results of a manual study performed at the Minneapolis quota center (where the unrouted "non-exclusives" are "routed" to specific carriers) over the same period, which does provide a breakdown between carriers by subarea. Using the percentage distributions between carriers from the Minneapolis study and the "non-exclusive" origin/destination statistics from the computer study, we have arrived at distribution of these data comparable to that of the routed and "exclusive" unrouted traffic.

4a/ Area A comprises, generally, the Atlantic area.

and by carrier as follows:

Carrier	Unrouted Transfers		Routed Transfers	
	Messages	Percent of Total	Messages	Percent of Total
ITT Worldcom	36,501	9.1%	27,277	31.8%
RCA Globcom	190,750	47.2%	27,683	32.3%
WUI	174,778	43.3%	28,031	32.7%
TRT	---	---	2,273	2.7%
Other	1,459	0.4%	450	0.5%
Total:	403,488		85,714	

4b/

For Area B, the comparisons are:

Carrier	Unrouted Transfers		Routed Transfers	
	Messages	Percent of Total	Messages	Percent of Total
ITT Worldcom	36,309	24.5%	23,867	37.8%
RCA Globcom	16,543	11.2%	13,890	22.0%
WUI	85,460	57.7%	17,571	27.8%
TRT	9,774	6.6%	7,778	12.3%
Other	---	---	28	0.1%
Total:	148,086		63,134	

4b/ Area B comprises, generally, the Latin American area.

4c/

And for Area C, the comparative statistics are:

Carrier	Unrouted Transfers		Routed Transfers	
	Messages	Percent of Total	Messages	Percent of Total
ITT Worldcom	5,747	4.2%	18,184	33.9%
RCA Globcom	125,066	92.0%	22,606	42.2%
WUI	300	0.2%	12,074	22.5%
TRT	---	---	689	1.3%
Other	4,881	3.6%	54	0.1%
Total:	135,994		53,607	

Thus, whether viewed from a world-wide perspective or upon a geographical Area basis, the conclusion to be drawn from these data is obvious. The distribution of unrouted outbound message traffic to the international record carriers pursuant to the existing Formula is grossly disproportionate to any imaginable standard which might be established for accomplishing a just, reasonable and equitable distribution of such traffic. A distribution of unrouted traffic proportionate to customer-routed traffic as proposed by ITT Worldcom, or even an equal distribution among all carriers serving a given distribution as proposed by TRT, would obviously produce sharply different results from the existing distribution. But even from a conceptual point of view, it would be impossible for any Formula to satisfy the mandate of

---

4c/ Area C comprises, generally, the Pacific area.

Section 222 that such a formula be "just, reasonable, equitable and in the public interest" and to also "fit" the highly skewed distribution of unrouted traffic produced by the present Formula.

TRAFFIC DISTRIBUTION PURSUANT TO ITT WORLDCOM PROPOSAL

As heretofore stated, ITT Worldcom has urged that the Formula should be revised so as to distribute unrouted traffic in proportion to the routed traffic received by a carrier for routings via authorized direct circuits. 5/

In order to quantify the effect, in terms of changed traffic distribution, of this proposed revision as compared with the existing Formula, two additional sets of data have been included in the heretofore referenced Tables I & II. First, in Table I, respecting routed traffic, a second set of data has been added to reflect an adjustment to the Western Union statistics so as to exclude traffic moving via indirect routings. These data are headed "Routed Transfers - Indirect Routings Excluded".

5/ The necessity for excluding traffic via indirect routings was explained at pp. 14-15 of ITT Worldcom's Response filed August 16, 1974.

Having adjusted the Western Union data to eliminate indirect routings from the routed traffic statistics, the percentage distribution, by carrier and subarea, so determined were then applied to the unrouted traffic pool on a comparable basis. This analysis yields a new unrouted distribution in accordance with ITT Worldcom's proposed revisions, i.e., distributed in proportion to routed traffic via authorized direct routings. This distribution is shown in Table II under the heading "Unrouted Transfers - Proposed Distribution"[5a/].

A comparison from Table II of the existing unrouted traffic with the distribution as proposed by ITT Worldcom is shown for combined U. S. origins, in the last column on Table II, headed "Net Change - Number of Messages Transferred". As is apparent from the "Net Change" data, Formula revision as proposed would result in some relatively significant shifts of unrouted traffic between carriers. This should not be surprising in view of the long overdue need for revision of the existing Formula. This factor should be recognized by the Commission in dealing with any

---

5a/ This redistribution of unrouted traffic is actually computed at the subarea level, with the subarea message distributions summed to yield Area distributions. The percentages shown in the Table are computed on the basis of the Area message totals. Therefore some slight differences may exist between the percentages shown in Tables I & II for the adjusted routed distribution and the resultant unrouted distribution.

arguments seeking modification of the plainly required revisions to the Formula so as to reduce the magnitude of the changed traffic distribution resulting from such a revised Formula.

CONCLUSION

In its previous comments in this proceeding ITT Worldcom has shown, qualitatively, beyond reasonable doubt that the existing Formula is now and has for a number of years been unjust, unreasonable, inequitable and not in the public interest. The data from the Western Union traffic study have now dramatically illustrated the correctness of that qualitative analysis. ITT Worldcom therefore requests that the Commission now declare the existing Formula to be unlawful and prescribe a new Formula which would allocate unrouted traffic in proportion to routed traffic received by a carrier for transmission over its authorized direct circuits.

Respectfully submitted,

ITT World Communications, Inc.

To: The Commission

SUPPLEMENTAL COMMENTS OF
WESTERN UNION INTERNATIONAL, INC.

Western Union International, Inc. (WUI) hereby submits its supplemental comments in response to the Commission's Memorandum Opinion and Order released June 6, 1975 herein.

From the comments filed in this case to date, and an examination of the study performed by The Western Union Telegraph Company (WUTelCo) on outbound transfer traffic, a few salient facts emerge. Among these facts are that the proposals of ITT World Communications Inc. (ITT) and TRT Telecommunications Corp. (TRT) (that unrouted traffic to each destination be distributed in the same proportion as routed traffic) is not as simple as it would appear on first glance. It is not equitable, and in fact is as arbitrary as any other method yet devised for distributing

unrouted traffic. Analysis of the study and of the operating results of the International Formula show that the Formula is performing its function well, is not inequitable, and it does not have any deleterious effect on the public whatsoever.

WUI Proposals for Formula Revisions

As WUI has pointed out in previous comments, it does not believe that any revision to the Formula is necessary. The industry has provided excellent service to the public for many years under the Formula, and can continue to do so for many more years. There are other pressing regulatory matters of higher priority and greater public interest which interact with the Formula issues. Depending upon the manner of resolution of the newly announced expanded gateway proceedings, the significance of any Formula revisions could pale. There is keen competition for international message traffic, and it is not inhibited by the Formula. Nevertheless, WUI recognizes that certain features of the Formula were designed in the light of circumstances that may have evolved since adoption. Consequently, WUI presents herewith three alternative proposals for action leading to a streamlining of the operation of the Formula. WUI believes that adoption of any one of these proposals will

be of more benefit to the public and the industry than the ill-considered ITT/TRT proposal. These proposals are submitted in response to the Commission's Order and do not constitute any waiver of WUI's previously asserted statutory hearing rights.

Proposal No. 1

WUI firmly believes that the carriers themselves could amicably work out amendments to the Formula which would be acceptable to all carriers. The mechanism for the resolution of any inter-carrier conflicts already exists in the International Formula Committee (IFC). The IFC was set up pursuant to the provision of Article XI of the Formula, which provides inter alia that

> "In the event there is disagreement among the members of the Committee with respect to any feature of the distribution of traffic under the formula, the disagreement shall be submitted to the interested carriers, including the Merged Company."

The proposals of ITT, TRT, WUI and any other carriers caring to submit proposals could be discussed in the IFC, and amendments to the Formula adopted, for ultimate approval by the Commission. However, a principal reason why the IFC has not been used to resolve differences between carriers as to Formula revision is that there is an imbalance of voting power within the

Committee. This is due to the fact that ITT casts four votes in the Committee, derived from All-America Cables and Radio, Mackay Marine Corp., Commercial Pacific Cable Company and Globe Wireless Incorporated. RCA Global Communications, Inc. (RCA) casts two votes, its own and that of Radiomarine Corporation of America. All other carriers have one vote each. Since ITT and RCA have such a disproportionate weight in the IFC, other carriers have been reluctant to submit disputes to this Committee for resolution. WUI therefore recommends that the Formula be amended by the Commission to provide that each carrier now operating as a unit be accorded only one vote in the International Formula Committee. Thereupon, the entire question of substantive Formula revision can be brought up promptly for resolution and recommendation to the FCC of possible changes acceptable to all concerned. An active participation by the Commission's staff in the IFC would be welcomed, and would materially assist the carriers' efforts to reach a consensus.

Proposal No. 2

Over the term of the operation of the Formula, the proportionate distribution of unrouted traffic to most areas of the world has become relatively static. Some sub-areas have been distributed in the same manner

for over twenty years. WUTelCo's international distribution center in Minneapolis and the operations of the International Quota Bureau (IQB) for collection of data and formulation of instructions have thus served to govern the distribution of only a small percentage of traffic. Consequently they can be eliminated with only a small loss of flexibility. To simplify and streamline the operation of the Formula, WUI proposes the following:

> All unrouted transfer traffic will be distributed to the international carriers in the same ratio as the distribution of unrouted traffic that was made during the period of the WUTelCo study of outbound international traffic (December 1974 - February 1975). Routed and self-originated traffic will not be considered in determining distributions.

The advantages of this proposal are many.* WUTelCo's study provides in a convenient form, all of the data needed to implement the proposal. Each

---

* ITT proposed a very similar arrangement in 1968. Although ITT's proposal was adopted by the IFC, it was not implemented. Minutes of the IFC, July 10, 1968, Paragraph 5.

carrier would have a known proportion of unrouted traffic and can plan its circuitry and plant facilities with assurance. The extensive manpower now needed by WUTelCo to apportion message traffic will become unnecessary, since the stability of quotas will facilitate reliable computerization of the distribution process by WUTelCo. The collection of data by the IRC's for the purpose of applying the Formula will not be needed, since routed and self-originated traffic will be irrelevant, and data for unrouted traffic is already available. The collection of statistics and the formulation of international instructions by the IQB will become redundant, and the costs associated with both the Minneapolis operation and the IQB will be eliminated.

The only aspect of the present operation of the Formula that has been alleged to be contrary to the public interest -- the fact that in a few sub-areas, the gain of a routed message results in the loss of an unrouted message -- will no longer be present. Each international carrier can solicit routings and direct filings without fear of loss of unrouted traffic. Assuming arguendo the validity of ITT's doubtful thesis concerning "disincentives" to good service to these sub-areas

(discussed elsewhere herein), it will no longer be relevant under WUI's proposal.

Proposal No. 3

In order to simplify the operation of the Formula and to modernize certain of its features, WUI offers the following package of amendments. Since some carriers would be benefited by some of the amendments to follow, and others by different amendments, this proposal is submitted as an inseparable package.

1. Replace the separate "gateway" and "hinterland" quotas by one composite nationwide quota, derived from the weighted average of the gateway and hinterland quotas for each destination. This amendment would reduce by half the number of international instructions that WUTelCo must follow. There would be no net effect on any carrier, since any loss in one quota would be exactly compensated by a gain in the other. It would greatly simplify the collection of data and formulation of international instructions since the gateway-hinterland distinction (which is irrelevant to the purposes of the Formula) would be removed. This proposal would also eliminate any sources of conflict over what traffic is to be considered gateway.*

* Some traffic originating in the gateway cities but filed with WUTelCo's CMB's, its Middletown, Va., computer facility or with its Moorestown international center is deemed by WUTelCo to be hinterland traffic but considered by WUI to be gateway traffic.

2. Eliminate WUI's exclusive right to all traffic filed with WUTelCo offices in Manhattan south of 60th Street, and at designated WUTelCo offices in Washington and San Francisco; with WUI having the same right to collect traffic in those cities as the other IRC's located there. This would place all carriers on an even footing and would eliminate one of ITT's objections to the present Formula. If this Proposal No. 3 is adopted by the Commission in its entirety, WUI would exercise its right of cancellation of appropriate provisions of its Domestic Facilities Agreement with WUTelCo.

3. Change the basis of the quota from gross international tolls to numbers of messages, and eliminate reporting of tolls. This would simplify accounting and collection of statistics, without significantly affecting any carrier. Of course, WUTelCo would be obligated to distribute unrouted messages impartially among the IRC's so that none would be favored disproportionately with longer messages, or classes of messages with higher tolls.

4. Eliminate specialized treatment given to certain classes of service, such as governmental and press traffic, and treat all messages the same regardless of class. This would eliminate complications in reporting data and in WUTelCo's application of quotas.

In the absence of indication that the mix of the classes of messages varies from point to point, there should be no net effect upon the distribution of traffic.

5. Eliminate Schedule B. This is a special arrangement whereby certain traffic is transferred to RCA in accordance with an agreement which was based on conditions that have long ago been superseded. At the time of the merger of WUTelCo with the Postal Telegraph System (Postal), RCA had its own delivery system for inbound messages. Since it nonetheless transferred messages to WUTelCo for delivery, it was accorded the bulk of Western Union Cables' quota traffic in compensation, as a form of reverse proportionate return. Whatever the merits of this scheme may have been in 1943, there is no justification for its retention today. Neither RCA nor any other IRC has a delivery mechanism for inbound cables beyond its gateways (other than the limited direct access service), and RCA is no more entitled to a proportionate return than any other carrier. Over thirty years of benefits under Schedule B more than compensate RCA for any equities it had at the time of merger.

6. Eliminate the Area A, B, and C and all sub-area classifications and treat each destination country as a separate area. The quota to each destination would be the same

as that of the sub-area to which the destination presently belongs. Since the operations of the international carriers and WUTelCo are now computerized, the end result should be ease of operation even though the actual number of quotas involved increases. This is due to the fact that computerized operation now requires a separate function to determine the area and sub-area classification, which could be eliminated.

7. Adopt ITT's suggestion for elimination of quotas for both Canadian carriers. One carrier (Canadian National Railway Company) has indicated that it desires to withdraw from participation in the Formula, while the other carrier (Canadian Pacific Ltd. - CPL) has requested that its quotas to Australasia and British West Indies be retained. The quotas for international carriers were instituted at a time when the Commonwealth cables to the Far East were the principal Pacific facilities. Today however they have largely been superseded by satellite and by the numerous United States owned high-capacity cables to the Far East. The quota for CPL was instituted in recognition of its exchange of traffic with Postal. The benefit of the quota that CPL has received for over 30 years more than recompenses CPL for any contractual rights it might have had. Of

course, CPL would be relieved of any obligations imposed upon it by the Formula.

8. Include all of the RCA gateway traffic to Areas A and B under the Formula. RCA has elected not to receive any quota for traffic originating in the gateways and destinated to Areas A and B. The result has been that messages in this class of traffic routed via RCA have not been counted in RCA's quota, thus significantly increasing RCA's share of unrouted hinterland traffic. The reasons for permitting RCA this exceptional treatment no longer apply, and it should be abolished.

Adoption of ITT's Proposal Is Not In the Public Interest

The adoption of ITT's proposal would cause serious disruptions to the established patterns in the industry, with consequent harm to a number of carriers, and would serve no beneficial interest of the public. The only beneficiaries would be those carriers proposing revision of the Formula. Not one message would be speeded; not one member of the public would be affected; and the existing keen competition would not be enhanced.* In fact, as ITT itself admitted

* WUI cordially invites members of the Commission and its staff to visit WUI's modern computerized message center in New York City in order to dispel any mistaken theory that competitive incentives are stunted by the Formula's quota system.

in its Reply dated September 3, 1974, "except as to quality of service, that public is largely unaffected by the formula..." As WUI will demonstrate hereinafter, the Formula does not have any effect on quality of service to the public, contrary to ITT's allegations.

Although ITT attempts to disguise its own parochial, private interest in amending the Formula (at the expense of other carriers) as an overriding concern for the public good, it is clear that the public would not gain in the slightest from the revision suggested by ITT. It makes little sense to devote substantial resources of the Commission on the analysis of the effect of the proposed revision of the Formula, or to disrupt the present smooth working of the distribution mecha. sm, when no parties other than the proponents will be benefited.

The surface simplicity of the ITT proposal is deceptive. In actual application, it will be necessary to maintain constant monitoring of transfer traffic volumes of all carriers, including both routed and unrouted. Consequently, it will be necessary to maintain, as at present, the International Formula Committee and its operational arm, the International Quota Bureau, to collect the statistics and translate them into appropriate international

instructions to WUTelCo. The only change would be the arithmetical operations performed by the IQB. Consequently, from an administrative point of view little would be gained by adoption of the ITT proposal. Additionally, it makes no attempt to provide for the distribution of traffic to the many points in which no carrier has a direct line. Although these points normally have low traffic volumes, nonetheless, a mechanism would have to be maintained to provide for appropriate distribution of unrouted traffic, in some arbitrary fashion.

The ITT proposal is illogical. It would make the distribution of unrouted traffic entirely dependent on the distribution of routed traffic. However these two classes of traffic are largely different kinds of traffic. By and large, the routed traffic is business oriented traffic, originating mainly from Telex and TWX subscribers which normally are business entities. Unrouted traffic, however, is largely traffic filed with WUTelCo's Central Telephone Bureaus or over the counter, and consists principally of social traffic. Since the characteristics and senders of the two classes of traffic are so disparate, ITT's suggestion of making the distribution of one dependent on the distribution of the other is devoid of any logic and is as arbitrary as any other scheme yet proposed for distribution of unrouted traffic.

ITT has argued that the quality of service to the public is adversely affected by the operation of the Formula. ITT's curious argument is based on the fact that there are some subareas in which the quota of a carrier is measured by the total of unrouted transfer traffic plus prerouted and self-originated traffic. In a few such areas, the carrier would lose an unrouted message for each routed or self-originated message that it obtains. ITT argues that such a carrier has a "disincentive" to provide better service for messages destined for this area.

This argument is specious. In the first place, only a very small percentage of traffic is affected by this feature of the Formula. Attached hereto as Appendix A is a tabulation, based on WUTelCo's study, of all routed and self-originated traffic, by sub-area and by carrier, which could have resulted in the loss of equivalent numbers of unrouted transfer traffic. The total of all such traffic is 226,674 messages, as compared with a total outbound volume of 1,938,828 messages. Thus only 11.7% of the outbound traffic is affected by this feature of the Formula.*

---

*The tabulation contained in WUI's Responsive Comments dated September 3, 1974 erroneously included both routed and unrouted traffic to the sub-areas in question. ITT's hypothesis concerning "disincentives" can apply only to routed and self-originated traffic.

Even as to this small percentage, it is absurd to believe that the quality of service provided by any carrier is affected. All major international record carriers now are completely computerized. It is essential in a computer environment that all messages be treated as uniformly as possible. ITT's argument implies that any improvements in computer technology or message-handling techniques would be specifically designed to exclude from their benefits all traffic routed via or originated by the carrier which would result in the reduction of unrouted messages under the Formula. This is patently fallacious. It would be totally impractical for any carrier to so organize its computer processes. Furthermore, there would be no motive for such a carrier to take such steps since by definition it would not gain any traffic. Additionally, such discrimination would be in violation of Section 202 of the Communications Act.

WUI challenges ITT to demonstrate specifically, and in detail, how WUI has in any manner changed or failed to improve its handling of routed traffic to any of the destinations for which ITT claims there is a "disincentive" to better service. WUI also challenges ITT to disclose any instances in which ITT itself, or any other carrier, has provided less than the best possible service to such

areas. ITT's theory should be given no credence whatsoever unless and until ITT can demonstrate in specific detail any practical adverse effect on service to the public.

ITT's message distribution proposal has another significant disadvantage. Since the amount of outbound traffic (and by virtue of proportionate traffic agreements, the amount of inbound traffic) is dependent on the volume of routed traffic, the international record carriers will be compelled to devote ever-increasing expenses and effort to the solicitation of routings. By definition the targets of these efforts are the senders of unrouted messages who do not care which carrier handles their traffic. Accordingly, the result will be a waste of funds, which are ultimately derived from the rate payer, without any advantage to the public.

WUTelCo's survey of the transfer traffic does not show any failure of function of the Formula that would justify changing it. To the contrary, the effect on WUI of adopting the ITT proposal would be most harmful. WUI has determined that should this proposal be adopted, it would lose approximately $1,000,000 a year in net retained revenue. Additionally, WUI has made large investments in computers designed to handle the traffic load that it has been receiving both from its own originations and from the

quota traffic. If significant amounts of traffic that WUI receives under the quota were to be diverted by fiat to another carrier, WUI would have excess unused computer capacity. Since the level of international cable traffic has been static or declining in recent years, there is no expectation that traffic growth would fill the gap.

Conclusion

Since the Formula functions well in its present form, and adoption of the ITT/TRT proposal would provide no public benefits whatever, the Commission should not expend its scarce resources in pursuing this proceeding any further. However, if the Commission should deem it necessary to simplify the operations of the Formula, it should: (a) revise the voting struction of the International Formula Committee so as to provide a forum for the carriers to negotiate a mutually acceptable set of amendments for the Commission's approval; and (b) adopt the proposals set forth above for substantive changes in the Formula, consistent with the statutory procedural rights of the carriers.

WHEREFORE, the Commission is urged to discontinue this proceeding without further action or alternatively to adopt WUI's proposals.

Respectfully submitted,

In the Matter of	)	
	)	
International Record Carriers' Scope of Operations in the Continental United States, Including Possible Revisions to the Formula Prescribed under Section 222 of the Communications Act	)	Docket No 19640 RM-6 [illegible]

SUPPLEMENTAL COMMENTS OF TRT

TRT Telecommunications Corporation (TRT), pursuant to the Commission's Memorandum Opinion and Order, released June 6, 1975, FCC 75-617, hereby submits its supplemental comments relating to the revisions of the Formula prescribed under Section 222 of the Communications Act for the distribution of outbound international message traffic accepted by The Western Union Telegraph Company (Western Union).*/ In this regard, TRT respectfully states as follows.

In its prior comments submitted herein on July 8, 1974 and in its responsive comments submitted on August 16, 1974, TRT has demonstrated that the present Formula is unjust, unreasonable and inequitable. TRT has also proposed two alternative revisions which would cure the inequities and remove the disincentives to competition contained in the present Formula and would provide an equitable and logical method for the distribution of

---

*/ In response to paragraph 9 of the Commission's June 6, 1975 Memorandum Opinion and Order, Appendix A hereto contains TRT's direct file traffic data for the 13-week period of the Western Union study.

international message traffic filed with Western Union. Although TRT will not repeat its prior arguments here, we submit that its position in this proceeding has been confirmed and supported by the additional data available from the recent Western Union study.

In light of the results of the Western Union traffic study conducted during the period December 1, 1974 through March 1, 1975, TRT herein discusses what it believes are the two remaining points to be covered. Specifically, they are:

1) The exact manner in which the distribution of traffic is presently being made; and
2) The effect any specific amendments would have on the respondent and other international carriers.

For the analysis which follows, TRT used as a base the FCC Report of Telegraph Traffic, a Market Analysis for the Full Year 1974. Referring to the series of tables attached, Table 1 reflects the total amount of messages and revenues handled by the international record carriers (IRC's) in 1974, and Table 2 illustrates the participation percentages by major traffic movement for each IRC. By combining the data in these first two tables with the annualized data provided by the 13-week Western Union study, TRT offers what, we submit, is a most enlightening comparison of message volumes and revenues by message category for the U.S. IRC's (see Table 3). Within each carrier listing, the percentage figure represents the current relative impact of each message category on that carrier. Particularly noteworthy are the extremely large volumes and relatively high percentages of unrouted traffic being given to RCA and WUI as a result of the Formula.

To conclude the analysis of the distribution of unrouted traffic under the Formula, Table 4 provides a comparison between IRC's for the total routed traffic (direct file and routed Western Union transfers), routed Western Union transfers alone, and the amount of unrouted traffic transferred by Western Union to each of the IRC's. While RCA succeeds in obtaining only 30 percent of the routed, RCA is nevertheless awarded almost one half of the unrouted traffic. WUI, although receiving less than 30 percent of the unrouted, is awarded 38.7% of unrouted traffic under the Formula. Further, these figures do not include whatever return traffic RCA and WUI enjoy as a direct result of these extra volumes of unrouted traffic. TRT submits that these figures conclusively demonstrate the illogical, unjust and inequitable manner in which unrouted traffic is awarded largely to RCA and WUI.

In order to address the issue of the effect any specific amendments to the Formula would have on the carriers, TRT suggests that the most meaningful analysis is one which evaluates the impact any amendments would have on the total telegraph facility and associated revenues of each carrier, and not one which considers just the U.S. origin portion. Further, referring again to Table 4, one finds essentially no difference between the relative distribution among the IRC's for all U.S. origin routed (direct file and transfers) and the relative distribution for routed Western Union transfers only. Since TRT has suggested that the proportionment of unrouted should be based upon the percentage amount of routed transferred traffic, independent of the city of origin, and regardless of whether service to a destination

is direct or indirect, TRT has employed the set of percentages for routed transferred traffic in evaluating the impact of its suggested amendments to the Formula (see Table 5).

Comparing the percentages of routed transferred traffic with the current percentages of unrouted traffic for each IRC, and calculating the change required to equalize the routed and unrouted percentages of each carrier, one can derive the changes in unrouted message volumes by IRC. Then, applying to this change the average net U.S. revenue for an unrouted message, the potential increase or decrease in revenue for each IRC can be calculated. By comparing these changes to each IRC's total 1974 telegraph revenues, the real impact on telegraph revenues can be determined. Finally, a comparison between these potential revenue changes and each IRC's total 1974 operating revenues reveals that the effect of the suggested change in the distribution method for unrouted telegraph traffic would be negligible.

In the foregoing analysis set forth in Table 5, TRT has assumed essentially no change in the current distribution of transit traffic. It has been TRT's experience that transit traffic is exchanged between the carriers and their correspondents on the basis of the best division of tolls by origin-destination movement, and not according to U.S. origin/terminated volumes. Further, there exist set operating agreements, for example within the Commonwealth system, which define transit routings. These arrangements would continue regardless of the outcome of any Formula revisions.

Secondly, TRT's analysis excludes any speculation concerning the possibility of a redistribution in return traffic and associated revenues as a consequence of any shifts among the IRC's in unrouted traffic volumes. TRT has indicated that RCA and WUI are presently enjoying additional return traffic for the extra unrouted traffic they now receive under the Formula, and one could reasonably assume some loss if RCA's and WUI's U.S. origin volumes were reduced. However, TRT can derive no method for quantifying what might be a reasonable, expected change. In TRT's case to a large extent, and to a lesser degree among the other IRC's, international telegrams are switched via indirect routes, over which there is as a rule no expected return traffic. Consequently, changes in message volumes in these cases would not effect any gains or losses in return traffic. Further, there appear to be set operating arrangements between some IRC's and their correspondents which specify the exchange of certain categories of traffic. To the extent that these agreements exist, no change in return traffic should be expected.

Coupling the analysis provided herein with TRT's earlier comments in this proceeding, TRT believes it has factually and objectively addressed those issues set forth in the Commission's November 26, 1973 Order, as well as those other issues TRT has felt are pertinent to this inquiry. TRT has also offered what it believes is an equitable, fair and just method for unrouted traffic distribution, and one which would serve the public interest. TRT now urges the Commission to act expeditiously in making long-overdue changes to the Formula, changes which will reflect the operating arrangements of today

and not those of years long past and long since changed.

Respectfully submitted,

FEDERAL COMMUNICATIONS COMMISSION
Washington, D. C. 20554

In the Matter of International Record Carriers' Scope of Operations in the Continental United States, Including Possible Revisions to the Formula Prescribed under Section 222 of the Communications Act.	)	Docket No. 19660 RM-690

TO: The Commission

REPLY COMMENTS

RCA Global Communications, Inc. (RCA Globcom) hereby provides these reply comments on the question of whether the existing formula under which distribution of outbound international telegrams is made is unjust, unreasonable, and inequitable or not in the public interest. As the Commission is aware, this is the last round of written comments in a series of submissions on the complex and far-reaching issue of whether the present formula has, by the mere passage of time, ceased to meet the statutory standards which the Commission found it met when it was prescribed.

As explained in detail in our prior submissions

on this question, ITT World Communications Inc. (ITT) and TRT Telecommunications Corporation (TRT), the proponents of change in the formula, have advocated revisions the end results of which, if not the purpose thereof, are to apparently increase their respective shares of total revenue without showing how such artificially structured changes would serve the public interest or what considerations of equity justify such arbitrary transfer of revenues from other carriers which have acted in accordance with the formula prescribed by the Commission.

RCA Globcom reasserted the position that Section 222 of the Communications Act requires, as a matter of law, that upon the request of any interested party, there be a full evidentiary hearing before the formula may be altered. Such a hearing is not only required but necessary since any change in the formula such as suggested by ITT would have far-reaching consequences for the international telegram service. As the Commission is aware, the costs of providing telegram service have been rapidly escalating over the past several years. For example, the division of revenues paid to The Western Union Telegraph Company for the domestic handling of international telegrams has recently been increased from 6½ cents per full

rate word to 9½ cents. This increase alone will further decrease the profit from a service which already does not earn a reasonable return.

In addition, recent trends have indicated that the international telegram market will deteriorate more rapidly than previously forecast and that industry telegram volumes will be considerably lower in the future. This is illustrated by the fact that in 1974 total industry telegram revenues were $63,396,000. For the first six months of 1975, the industry revenues were only $27,457,000. We project that in 1976, the industry revenues will only be $52,000,000, the lowest total since 1950. Yet, in the face of this decline, it should be noted that there has not been a significant telegram rate increase since 1958.

All of the above factors indicate that the Commission should not take any action which would disrupt the existing structure of the industry until a most thorough hearing has been held. At such a hearing, RCA Globcom would expect that one issue on which evidence would be introduced would be the effect on the total industry of a change in formula in light of the recent developments affecting the telegram service.

At this point, RCA Globcom believes it is appropriate

to summarize for the Commission the comments already submitted and to demonstrate that the proposed changes in the formula would not be beneficial to the public interest. Additionally, RCA Globcom will comment on the suggestions for a change in the formula made in the last submission by Western Union International, Inc. (WUI).

Summary of RCA Globcom Position

I. Burden Of Showing Unlawfulness Of Existing Formula Is On The Carriers Proposing Change

Section 222(e)(3) provides:

> Whenever. . .after a full hearing, the Commission finds that any such distribution of telegraph traffic among telegraph carriers. . .which is being made or which is proposed to be made, is or will be unjust, unreasonable, or inequitable or not in the public interest, the Commission shall by order prescribe the distribution of such telegraph traffic. . .which will be just, reasonable, equitable, and in the public interest, and will be, so far as is consistent with the public interest, in accordance with the existing contractual rights of the carriers.

Under this provision, the Commission has a two-fold duty. First, it must establish a reasoned basis for and find that the existing distribution is contrary to the public interest and only then may it undertake to prescribe a new formula. Consequently, the burden is on the proponents of change to present convincing substantive data to show why the formula which was originally found to meet the statutory

standard, and stood for twenty years without requests for substantive change, now fails to meet the public interest.

We noted in the first round of comments that the Commission's order of designation, 43 F.C.C. 2d 1174, appeared to give the impression that the Commission had shifted the burden just noted from the advocates of change to RCA Globcom on the grounds that the formula was "anachronistic" or "outmoded". RCA Globcom stated in response that such legal concept must be rejected outright. The age of a Commission order does not give a presumption of invalidity; if anything, the contrary must be the case since the formula has withstood the test of time. To support this proposition, the New England Divisions Case, 62 I.C.C. 513, 563, in which the ICC found that the age of an existing division of revenues agreement between two rail carriers afforded no presumption of unreasonableness of the divisions, was cited. In addition, it was noted that the acceptance of such a presumption would mean that the lapse of time alone would render a decision or statute prima facie unlawful.

II. The Criteria Of Lawfulness Is The Public Interest And Not The Private Interests Of ITT Or TRT

In our original comments, we posed the obvious question of how the public interest would be furthered through a change in the formula. The comments received by ITT never addressed

this basic question. Rather than listing the manner in which the public would benefit, the thrust of its arguments was that the formula should be changed so that it would benefit

ITT did not assert that a change in the formula would cause the rates for telegram service to be reduced, cause an improvement in the quality of service or, in any way, show benefits accruing to the public. To the contrary, ITT explicitly recognized that the overall quality of international message telegram service has been good. (ITT Comments, p. 11). With respect to rates, no carrier asserted that a change in the formula would permit a rate reduction for they must recognize that the shrinking volumes of telegram traffic coupled with the increasing costs, e.g. the almost 50 percent increase recently negotiated in divisions to be paid to The Western Union Telegraph Company, foreclose the possibility of such a decrease. Rather, as RCA Globcom demonstrated, the thrust of its proposal was that such changes in the formula would increase the competitive efforts of the carriers and were in the public interest on the apparent assumption that competition is per se beneficial and in the public interest. That there is no such principle has been affirmed again and again by the courts. See for example, FCC v. RCA Communications, Inc., 346 U.S. 86 (1953). Instead, the courts have held that the existence of a regulatory

structure under Congressionally devised public interest standards means that a commission cannot equate competition with the public interest unless it could be shown to be beneficial. ITT and TRT have completely failed to meet this burden.

III. The Existing Formula Permits Reasonable Competition

RCA Globcom demonstrated in its prior comments that the existing formula does permit reasonable competition while at the same time imposing a certain restraint on the carriers to discourage competitive efforts which would have deleterious effects. Thus the Commision stated in the Western Union Merger Proceeding that the combining of routed, unrouted, and self-originated traffic in computing how quotas are satisfied

> diminishes the incentive of the international carriers to expend effort and revenues in attempts to divert traffic from each other by solicitation efforts which may not improve quality of service; and it also diminishes the necessity for these carriers to build up additional facilities for the collection of their own traffic, in duplication of existing facilities of the merged company. These savings should contribute to a more efficiently and economically operated international telegraph system. Western Union Merger Proceeding, 10 F.C.C. 184, 191 (1943)

The above statement cannot be attacked on the false basis that it was made over thirty years ago when competition did not have

the emphasis that it does today. Such a conclusion would be incorrect. It must be recognized that while competition has had new emphasis in the domestic communications field within the last five years, the international communications market has been characterized by intense competition since its inception. Well before the 1943 merger of Western Union and Postal Telegraph, Inc., at least six international carriers were strenuously competing with one another. Consequently, the Commission had experience with both the benefits and adverse effects of this competition at the time the formula was prescribed and acted to prevent those excesses in the international field which would have detrimental effects on the public.

We also brought to the attention of the Commission that ITT acknowledged that the existing formula provides some incentive to actively solicit traffic. ITT stated that "(a)s a result of continuing competitive spirit, various carriers. . .attempted. . .to improve their relative market shares", (ITT Comments, p. 16); that the alleged problem with overages and deficiencies lies "in traffic shifts resulting from competition between carriers", (ITT Comments, p. 17); and that indeed, the continued growth

of competition can, at least in part, be attributed to this very formula which was apparently designed to restrain competiton. (ITT Comments, Appendix 1, Issue 2, p. 7). These statements support the proposition that the existing formula does not dampen the competitive efforts of the carriers to render the best possible service. The fact that there are some restraints, while not satisfactory to ITT in its pursuit of increased corporate revenues, has not and can not be shown to be adverse to the public interest.

IV. A Change In The Formula As Suggested By ITT Would Be Adverse To The Public Interest Because Of The Large Increase In Sales Expense That Would Result

The ITT proposal would basically have the unrouted traffic distributed to the international carriers in proportion to the number of routed messages each carrier receives from Western Union.* This plan would upset the current market structure and compel carriers to expend substantial sums for solicitation with only detrimental effects on the public and the carriers. The plan would

*TRT also proposed a plan similar to ITT's suggestion. The ITT and TRT plans differ in that ITT would make the distribution of unrouted to those carriers having direct circuits to a country while TRT would eliminate the "direct circuit" requirement. TRT also suggested as an alternative that all unrouted traffic be divided equally among all the carriers tariffed to serve a given location.

result in a transfer of approximately $1,990,595 gross international tolls per year from RCA Globcom to the other carriers. We submit this proposal for private enrichment by manipulating the formula would not be in the public interest.

As explained in RCA Globcom's Supplemental Comments filed on August 1, 1975, the increase in sales expense would result from the "multiplier effect" inherent in the ITT proposal. To understand this principle it is first necessary to realize that of the approximately 6.6 million telegrams annually interchanged with Western Union, a little more than 75% are <u>not</u> routed by the sender. Consequently, under that proposal, if a carrier secured a routed message through solicitation, it would automatically receive not only that one message but an additional bonus of three or more unearned unrouted messages as well. When the single routed and three or more unrouted are combined with an equal number of inbound messages*, it can be seen that the revenue benefit from soliciting a single routed message would be generally seven or eight times the revenue from that single routed message.

---

*Most overseas administrations return traffic to the United States IRCs more or less in proportion to the traffic they receive from each of the IRCs.

It was also demonstrated that unrestricted competition would inevitably cause each carrier to expand these solicitation efforts until the marginal solicitation cost expended per routed message received from Western Union approached the total revenue that the IRC received not only from that routed message but rather from up to seven or eight additional outbound and inbound messages.*

The overall effect of the ITT proposal would be, therefore, to give the carriers a compelling incentive to increase their sales expenditures in a hope of securing that additional routed message. We estimated that the approximately $1.3 million now spent annually on telegram solicitation would be increased many-fold. Such proposals would not yield any benefits to the public. Rather, the most likely outcome would be telegram rate increases, a diminution of service quality or both brought about by the wasteful escalation of nonproductive sales effort.

We again direct the Commission's attention to the statement made by it over thirty years ago in the original

---

*As previously shown, the IRCs incur relatively little variable operating costs on either routed or unrouted messages originating with Western Union.

formula proceeding. There the Commission realized that excessive sales expenditures yield no public benefits. It also realized that a formula that restrained such excesses would contribute to a more efficiently and economically operated international telegraph system. We submit that the relative stability of international telegram rates in face of inflation, declining volumes, and increased payouts to Western Union demonstrates that this finding remains as true today as in 1943 when it was made.

V. Equity As Between The Carriers Does Not Require A Change In The Formula

Realizing that it could not carry the burden of demonstrating that the existing formula is adverse to the public interest, ITT fell back on a self-serving argument that it only had to demonstrate that the formula was inequitable as between the various carriers. We do not believe comment is required on the substantive merits of its legal argument. It is sufficient to state that it did not demonstrate that the formula is inequitable or that its recommendation is now equitable.

In fact, the Commission in prescribing the formula found it to be not only just, reasonable and in the public interest but also equitable. Further, no carrier raised any

question with respect to the equity of the formula until the formula was over 20 years old. Given this situation, we believe that ITT has a heavy burden of showing the change in conditions which now makes inequitable a formula prescribed by the Commission and indisputably equitable for two-thirds of its existence.

It is obvious that ITT has not carried this burden. It has sought to define equity as encompassing ITT's interest alone. This definition of equity is unacceptable since it disregards not only precedent but also the very meaning of the term itself. Any acceptable definition of equity must include due regard for the interests of all of the carriers receiving traffic under the formula. We submit that the Commission must consider that RCA Globcom has equitable rights to the traffic it has carried under the formula for 30 years and under which it has provided unsurpassed service to the public. A sudden diversion of significant revenues from RCA Globcom to ITT or TRT would be grossly inequitable and would serve no possible public benefit.

ITT, on the other hand, only argues for more and more revenues for itself. Yet ITT has done very well under the existing formula. It received over the last 30 years a

greater share of the telegram traffic than was originally envisioned under the formula. In fact, as of December 1973, ITT had overages in excess of $24.6 million. This represents excess benefit received by it under the operation of a formula which it labels "inequitable". We again submit that once having received more tolls than originally envisioned, ITT should not be heard to argue that "equity demands" even more be taken from the other IRCs and handed to it.

VI. Any Change In The Formula Must Recognize The Accumulated Overages and Deficiencies

RCA Globcom previously stated to the Commission that even in the event the formula is changed, the Commission must recognize that the accumulated overages and deficiencies represent a lawful obligation which may not legally or equitably be voided without the consent of all parties.

The concept of overages and deficiencies has its basis in the formula, the basic operation of which was described by the Commission in the designation order. An overage is the amount by which a carrier has exceeded its quota for any category of traffic to a subarea and a deficiency occurs when the routed and unrouted traffic turned over to a carrier is insufficient to satisfy its quota. ITT's accumulated overage as of December 1973 was $24.6 million. RCA Globcom's deficiency as of the same date was $49.8 million.

It should be realized that these overages and deficiencies result from the operation of a formula provision prescribed by the Commission. Section V.(ii) states that if the unrouted messages distributed under the quotas

> fail in any month to give any international carrier its quota of gross international tolls from such category, the distribution of messages shall be modified as soon as is practicable after the ascertainment of such deficiency in such deficiency in such manner as to compensate for such deficiency and to assure to such carrier thereafter its quota of gross international tolls. . . .(Emphasis added).

This provision requires that the Commission recognize that RCA Globcom has not been receiving the amount of unrouted traffic required under the formula. It also requires that an integral part of any change in the formula be a provision compensating RCA Globcom for its accumulated deficiency The above cited language gives RCA Globcom a vested right to be compensated for past deficiencies and that right cannot be taken away by changing the formula.

In other words, the Commission, once having determined that the formula which gives rise to these amounts is in the public interest, cannot, in revising the formula, void the accumulated deficit without adequate compensation. In addition to this legal obligation emanating from the language of the formula itself, RCA Globcom submits that it has an equitable claim in recognization that it has in good faith complied with the formula under the assumption that the

continuing obligations as reflected by the deficiencies would be honored. We conclude that if a change in the formula is to be made, the change must reflect the accumulated deficiency and compensate for it or be the result of a voluntary compromise under which the parties would relinquish their right under the formula in return for other benefits they find compensatory.

The WUI Proposals

In its latest round of comments, WUI suggested three different proposals for changing the formula. First, it recommended that the formula be amended by the Commission to provide that each carrier now operating as a unit be accorded only one vote in the International Formula Committee. This would eliminate the situation where ITT casts four votes in the Committee because of its acquisition of All-America Cables and Radio, Mackay Marine Corp., Commercial Pacific Cable Company and Globe Wireless Incorporated. It would also eliminate one vote of RCA Globcom's. WUI states that if this change were made, any reluctance of the other carriers to submit disputes to the Committee would disappear and it would function more efficiently. We agree and do not oppose this suggestion for change in the formula.

Second, WUI recommends that all unrouted traffic be distributed to the international carriers in the same proportion as the distribution of unrouted traffic that was made during the period of the Western Union statistical study of outbound international traffic (December 1974-February 1975). Routed and self-originated traffic would not be considered in determining the distribution of unrouted traffic.

RCA Globcom believes that this recommendation would merit serious consideration. This WUI proposal would eliminate that feature of the formula most objected to by ITT in that the securing of additional routed traffic would no longer mean that in certain situations the carrier would automatically lose unrouted traffic. The WUI proposal would not suffer from the unprecedented infirmity of the ITT proposal which would hand the carrier securing a routed message not only that routed message but also an unearned bonus of six or seven unrouted and inbound messages as well (the "multiplier effect"). Accordingly, under the WUI proposal a carrier would neither be penalized nor unduly rewarded by its solicitation efforts and while solicitation

expenses would undoubtedly increase, they would be held at a far lower level than under the ITT proposal. Moreover, any revenue effect on the carriers of the WUI proposal would be gradual. Each carrier could attempt through increased solicitation efforts to dry up the pool of unrouted traffic but it would not receive a big bonus if it converted an unrouted message into a routed one. Thus, the feature that each carrier maintain its relative share of the unrouted pool as of a specific period would result in a gradual decline in the size of the unrouted pool but not produce a drastic change such as proposed by ITT which would shift very large amounts of revenue from any one carrier to another in one sweeping action.

In recognition of the different views presented and in order to facilitate a compromise solution, RCA Globcom, without prejudice to its legal right to a full evidentiary hearing under Section 222(e)(3) and its legal and equitable right to have future compensation for the accumulated deficiencies in the event this compromise is not effectuated, would support the second WUI proposal.

The third WUI proposal, however, does not provide a satisfactory basis for a change in the formula. This proposal has the following parts which according to WUI are inseparable:

- Replace the separate gateway and hinterland quotas by one composite nationwide quota.
- Change the basis of the quota from gross international tolls to the number of messages.
- Eliminate specialized treatment given to certain classes of service, such as governmental and press traffic, and treat all messages the same regardless of class.
- Eliminate the Area A, B, and C and all subarea classifications, and treat each destination country as a separate area.
- Eliminate WUI's exclusive right to all traffic filed with Western Union offices in Manhattan sourth of 60th Street and at designated Western Union offices in Washington, D.C. and San Francisco; WUI would have the same right to collect traffic in those cities as the other IRCs located in those cities.
- Eliminate the quotas for both Canadian carriers.
- Eliminate Schedule B.
- Include all of the RCA Globcom gateway traffic to Areas A and B under the formula.

The first four parts of WUI's third proposal would appear to affect all carriers equally and therefore would

not be objectionable. RCA Globcom would also not object if WUI decided that it would give up its right to traffic filed with certain Western Union offices in the gateway cities under the indicated condition. The changes it suggests, however, with respect to Schedule B is in an entirely different category. It is an unilateral attempt by one carrier to deprive another carrier of its legal, contractual and formula rights without any substantive factual support or any legal foundation.

Schedule B was originally devised to recognize the contractual rights which RCA Globcom had under arrangements with Western Union and further to compensate it for the relatively unfair position in which it had been placed by the dominant Western Union position that existed at the time the formula was prescribed.* As described in the Merger Case, RCA Globcom "was limited by competitive and contractual restrictions in obtaining unrouted out-bound trans-Atlantic

---

*Prior to the merger, Western Union channeled nearly all of its Atlantic traffic to its cable department, and Postal, the only other domestic carrier, channeled its overseas traffic to its affiliates, leaving RCA Globcom virtually without access to the hinterland market.

and Latin-American messages in 1942. . ." Ibid. at 190 (Emphasis added). Schedule B was the means by which the Commission fixed relative rights and prevented the continuation of a preexisting unfair division. By approving Schedule B, the Commission was motivated not only by equitable considerations because Section 222 specifically provides that the formula "will be, so far as is consistent with the public interest, in accordance with the existing contractual rights of the carriers." (Emphasis added). Accordingly, we submit that if any action is taken to revise the formula, the Commission is required to recognize the contractual rights of RCA Globcom to Schedule B traffic. The change as suggested by WUI would in effect abrogate those contractual rights without any showing that they are inconsistent with the public interest.

With respect to the WUI proposal to "include all of the RCA gateway traffic to Areas A and B under the Formula," after discussions with WUI, it is our understanding that it intended that RCA Globcom would receive quotas to reflect the base period traffic to such Areas originating in the gateways as well as the hinterland. Unfortunately, there is a paucity of data on the traffic actually handled by RCA Globcom to those areas for that period. Further, even if it were available, it

would require a substantial analysis to determine the effect such a change would have. Therefore, at this point RCA Globcom opposes this WUI proposal until such time as it has been able to locate the necessary information and had a full opportunity to evaluate it.

Conclusion

RCA Globcom submits that the proponents of change have not carried the heavy burden of proving that the existing formula is unjust, unreasonable, inequitable, and not in the public interest. Their proposals suffer from various defects, which have been detailed in this and prior comments, and would act contrary to the public interest. Therefore, we believe that the Commission must again hold that the existing formula continues to meet the statutory criteria.

It is obvious that this proceeding will have a far-reaching effect on the public insofar as concerns rates for telegram service and the ability of all carriers to provide a quality service in the future. In view of this, RCA Globcom, subject to its offer of compromise set forth above, again asserts its rights to a full and evidentiary hearing on the formula question. Without this hearing, RCA Globcom and,

more importantly, the public will be denied the due process protection given by the statutory requirements of Section 222.

Respectfully submitted,

REPLY COMMENTS OF ITT WORLD COMMUNICATIONS INC.

ITT World Communications Inc. (ITT Worldcom) hereby submits its Reply Comments in the above captioned inquiry into revisions of the International Formula. Through the ten-plus year history of this proceeding ITT Worldcom has conclusively demonstrated that substantial revisions to that Formula are necessary. ITT Worldcom has proposed a revised Formula to distribute unrouted in proportion to routed traffic; as will be seen hereafter it also regards the all-routed suggestion made by The Western Union Telegraph Co. (Western Union) and by the Office of Telecommunications as an acceptable alternative revision to the existing Formula.

With the completion of this fifth round of formal pleadings, and the completion of a lengthy and detailed traffic study by Western Union, this matter is clearly ripe for Commission decision. 1/

1/ Any "hearing" requirement either from the Communications Act or the Administration Procedure Act will have clearly been satisfied at this point. No material issues of fact are in dispute so that an "oral, evidentiary hearing" is clearly not required or needed.

ITT Worldcom has shown -- throughout the numerous pleadings which have been required in this proceeding -- the clear necessity for substantial revision to the existing Formula; those carriers urging the maintenance of status quo have completely failed to rationalize their position with the statutory requirement that the Formula be "just, reasonable, equitable and in the public interest".[2/] The Commission should therefore now act to replace the anachronistic Formula existing today with a Formula which satisfies the statutory mandate at the earliest possible moment.

ITT Worldcom has proposed a revised Formula which would distribute unrouted traffic to a carrier in proportion to the routed traffic transferred to that carrier, by Western Union, for transmission via such carrier's direct circuits to overseas points. Such a Formula would clearly provide a reasonable distribution of unrouted traffic; would foster the Commission's policy favoring competition among international record carriers; and, by eliminating many of the complexities of the existing Formula, would simplify the administration of the Formula. Recognizing, however, the several expressions by Western Union of concern with the administrative burden to it of any Formula, ITT Worldcom would be agreeable to a further simplification in the Formula administration. Rather than maintaining separate Formula distributions

---

2/ The so called, "compromises" proposed at the eleventh hour by Western Union International, Inc. are both insubstantial and wholly inadequate.

by destination country, as proposed, the Formula could be established to provide a single worldwide distribution of unrouted traffic in proportion to each participating carrier's share of routed Western Union transfers (i.e., the data base would be all U.S. origin Western Union transfers to all overseas destinations with no further delineation of traffic -- except as between routed and unrouted, and international carrier by which routed).

Another acceptable alternative has previously been urged by Western Union, and recently endorsed in the draft report prepared by the Office of Telecommunications of the U.S. Department of Commerce,[3/] i.e., elimination of a Formula, as such, and instead requiring that all telegraph message traffic filed with Western Union be specifically routed by the sender. While noting the concerns expressed in the Supplemental Comments of RCA Global Communications, Inc. (respecting the all-routed proposal in the Office of Telecommunications Report) that a customers routing may be improperly influenced by the name similarity between Western Union and Western Union International, as well as ITT Worldcom's earlier expressed comments of a similar nature, ITT Worldcom has come to the view that this problem can be somewhat alleviated through the institution of appropriate administrative procedures on the part of Western Union, and its employees and agents.

3/ While this Report has apparently not been formally filed with the Commission as part of this Docket, it has received wide circulation, including, at least, the carriers having an interest in the Formula and the Commission's Staff.

The all-routed proposal has the virtue, as noted in the Office of Telecommunications report, of providing a "true competitive solution." It would place all carriers on an equal competitive footing and thereby further the Commission's policy goal of stimulating competition among communications carriers. It is also most consistent with Western Union's concern for administrative simplification of its Formula responsibilities.

ITT Worldcom does, however, disagree with the suggestion in the Office of Telecommunications report that implementation of its all-routed proposal should require a three-year phase-in period. The only significant effort required for implementation of an all-routed approach is the development of Western Union message acceptance procedures which will assure fairness of customer selection for all IRCs. This effort should easily be accomplishable within six months after Commission determination to adopt an all-routed approach, including time for Commission approval of such acceptance procedures.

In conclusion, ITT Worldcom submits that the extensive record in this proceeding demonstrates beyond argument that the existing International Formula is contrary to the public interest and is unlawful. ITT Worldcom has proposed a revised Formula which relates unrouted traffic to the routed traffic received by a carrier. An alternative and equally

acceptable Formula revision has been proposed by the Office of Telecommunications, and supported by Western Union, to require all outbound traffic to be routed by the sender. Either of these proposals is consistent with the Formula requirements of Section 222 of the Communications Act, and, as well, with the general policies of the Commission.

The record is now complete and the issue is ripe for decision. Any further delay would be unconscionable. "Let right be done."

Respectfully submitted,

ITT World Communications Inc.

To: The Commission

REPLY COMMENTS

Western Union International, Inc. (WUI) hereby submits its Reply Comments in compliance with the Commission's Order of August 19, 1975, extending the time for reply comments.

Summary

The principal proponents of change in the International Formula, ITT World Communications, Inc. (ITT) and TRT Telecommunications Corporation (TRT), have now had an opportunity to fully substantiate their contentions that the Formula needs revision. It is remarkable, therefore, that in their respective Supplemental Comments filed August 1, 1975, neither TRT nor ITT has found anything significant to add to its previous insufficient case. When the ITT comments are analyzed, it can be seen that ITT has made but a single substantive point. That is, the various carriers do not receive the same percentage

of unrouted transfer traffic as they do routed transfer traffic. From this well-known undisputed fact, ITT leaps to the conclusion that the Formula is "unjust, unreasonable, inequitable and not in the public interest". ITT's reasoning is circular and unpersuasive. Because routed and unrouted ratios are disparate the Formula should be changed to make them identical, according to ITT.

The TRT comments are similarly devoid of any rational connection between its proposal and either logic or the public interest. TRT's petition does little more than point to the differences between routed and unrouted transfer traffic, without demonstration of any logical connection. TRT adds calculations purporting to demonstrate TRT's belief that the impact of either the TRT or the ITT proposal upon the international carriers will be slight. WUI disputes the accuracy of TRT's calculation of the impact on WUI. However, assuming arguendo its validity, TRT's argument is two-edged. If the impact of a Formula change on the international carriers is in fact slight, there really is no justification for the Commission's devotion of substantial resources to the investigation of the change in the Formula, since the public is not affected at all.

To the extent that the Formula needs any amendment at all, the process can be accomplished far more efficiently by using the existing mechanism for resolving Formula disputes.

This is the reasoning underlying WUI's Proposal No. 1 in its August 1, 1975 Supplemental Comments. WUI believes that if the voting provisions of the International Formula Committee (IFC) were to be modified to make it a representative body, and the Commission's Staff were to take an active and constructive role in the IFC deliberations, the carriers would in a relatively short time agree upon a Formula modification that would meet the essential requirements of all parties. The Commission would then be able to impose reporting requirements and deadlines.

Similar procedures have proved effective in other situations where a number of carriers with seemingly irreconcilable views reached a consensus through negotiations under Commission guidance. For example, the members of the Marisat consortium managed to obtain substantial agreement on almost all of the aspects of a $100 million dollar system to accomplish an unprecedented task. Similarly, negotiations under the Commission's insistence have resolved complex issues by participants with widely divergent view points in areas such as the rates and conditions of circuits offered by the Bell System to other common carriers.

Consequently WUI urges that the Commission adopt WUI's Proposal No. 1, contained in its Supplemental Comments, and

amend the Formula to provide for one vote for each carrier. The carriers should thereupon be required to meet for serious negotiations to adopt any appropriate amendments to the Formula for approval by the Commission. Such a procedure would be in full accordance with Section XI of the Formula which requires that disputes among interested carriers be submitted to the IFC for resolution. WUI's alternative Proposals No. 2 and No. 3 (in our Supplemental Comments) could form the basis for IFC negotiations because neither proposal serves partisan interests of any single carrier.

ITT's Proposal Is Deficient

In its Supplemental Comments, ITT failed to address the practical problems and inconsistencies inherent in its proposal. WUI has already demonstrated in its Supplemental Comments the illogic of tying the distribution of unrouted traffic, which is mostly social, to routed traffic which is mostly business. Nor has ITT provided any details of how it proposes to distribute traffic destined to the many points to which no carrier has an "authorized direct circuit".

Since ITT's proposal would limit the benefits of the Formula to those carriers with "direct circuits" to particular overseas destinations, it is necessary to examine this concept. ITT does not provide a definitiion of a "direct circuit". Upon examination, this concept appears to be vague and there

are many possible definitions. For example, a destination to which there is an "authorized direct circuit" could be defined as:

(1) A destination country to which there is a physical circuit directly from the continental United States that does not pass through an intermediate country;

(2) A destination country to which there is a circuit that might pass through an intermediate country, but with a continuous electrical connection;

(3) A destination country served by a circuit which passes through an intermediate country with an automatic switch;

(4) A destination country to which traffic is forwarded manually or semiautomatically from an intermediate country;

(5) A destination country with whom the U.S. carrier has a 50-50 division of tolls, regardless of circuit configuration;

(6) A destination administration with whom the U. S. carrier settles accounts directly, regardless of the ratio of the division of tolls and of the circuit configuration;

(7) A destination administration with whom

there is direct settlement of accounts by the U. S. carriers but the traffic transits an intermediate country which is compensated on a per-word or message basis; or

(8) A destination administration in the same circumstances as (7), except the intermediate country is compensated on a flat monthly basis.

The above examples are more than hypothetical. Other real complexities exist, such as message traffic to the U. S. Virgin Islands, where WUI operates through an affiliate and receives U. S. Mainland traffic retransmitted from Puerto Rico. Query: does WUI have "authorized direct circuits" to the Virgin Islands within ITT's concept of a revised Formula?

WUI does not argue that any one of the above examples should control ITT's definition of "authorized direct circuits." However, the existence of the numerous possible definitions will inevitably lead to disputes in the administration of the Formula under ITT's proposal.

In seeking to make the distribution of unrouted traffic dependent upon the pattern of routed traffic transferred by The Western Union Telegraph Company (WUTelCo), ITT inconsistently ignores the significant amount of traffic generated by WUTelCo Telex and TWX subscribers and filed with the international

carriers through direct access connections. A WUTelCo Telex subscriber who desires to route a message via WUI could either dial 6481 to reach WUI's computer directly, or 6161 to send a routed message to WUI's computer via WUTelCo's computer facilities. ITT would apparently regard the 6161-dialed message as routed via WUI, but not so for the 6481-dialed message. Obviously a subscriber dialing either number is manifesting his intention to route specifically via WUI. This inconsistency in ITT's proposal is another indication that it is ill-conceived and unworkable.

The avowed rationale of ITT's proposal is that the share of routed traffic that a carrier obtains is solely dependent on the quality of service. ITT argues that a carrier with a higher proportion of routed traffic has a better service and should be rewarded by a greater share of unrouted traffic. This argument rests upon a fallacious premise. Since the quality of service for outbound traffic is the same for all destinations due to the uniform treatment required by the carriers' message switching computers, the proportion of routed traffic should be roughly the same regardless of the country of destination. Such is not the case, however.

Attachment A hereto shows the distribution of routed

transfer traffic to various destinations. Each carrier has a wide spread between the lowest and the highest share of routed traffic to particular countries. For example, RCA ranges from 2.5% for Cuba to 45.5% for Iran. WUI's ranges from 21.1% to 63.5%. It is inconceivable that such disparities could be explained solely by a difference in service quality to these various countries of destination. It is more reasonable to assume that a carrier's share of the routed market to any country is also affected by the amount of solicitation directed to customers with significant traffic to that country, and on an historical association of a particular carrier with that country.

For example, TRT has a low market share to all countries except Central and South America, the Caribbean area, and Germany, where its share is significantly higher. TRT has of course a long history of service to the Latin American countries, and has concentrated considerable effort to developing traffic to its recently acquired European direct service points, such as Germany. Likewise, RCA has an historical association with the Pacific area, and consequently has a generally large share of routed traffic to that area. It is apparent that market share is dependent on many factors in addition to service quality, and ITT's avowed rationale is clearly invalid.

TRT Position Is Unsound

TRT's Supplemental Comments add little or nothing new to this case. TRT also fails to draw any logical connection between routed business traffic and unrouted social traffic. Like ITT, TRT relies solely on the fact that the distribution ratios of routed and unrouted traffic are not the same -- a well-known phenomenon due largely to historical and marketing factors. TRT's evaluation of the impact of its suggested amendment to the Formula is not valid, since it includes the revenues of the carriers from telex and leased channel traffic. Obviously, this overall revenue cannot be used to measure the effect upon the U.S. carriers of artificially-induced shifts in telegraph message traffic.

Furthermore, the calculation in TRT's Table 5 indicating an annual loss of $511,342 for WUI grossly understates the results. TRT ignores the fact that a large part of the traffic that WUI would lose under TRT's Formula revision is destined to the United Kingdom, for which WUI handles both terminals and retains more than the average revenue per unrouted message utilized by TRT in its calculations. Nor does TRT give any recognition to the loss of reciprocal inbound traffic derived from proportionate return agreements with overseas

correspondents. WUI estimates that its actual revenue loss would be approximately twice that of the erroneous TRT estimate.

RCA Addresses Irrelevant Issues

RCA Global Communications, Inc. (RCA) devotes a substantial portion of its Supplemental Comments to a discussion of a draft report prepared by the Office of Telecommunications of the U. S. Department of Commerce. This report contains a recommendation that customers be compelled to specifically route all of their overseas messages via a particular carrier. Obviously, it would be impractical to force the senders to specify a carrier routing. Would the sender be denied service if he declined to choose a specific international carrier when filing an international message through WUTelCo's central telephone bureau? Since the Commerce Department draft report has not been formally adopted, nor officially placed before the Commission as an alternative in this case, WUI does not believe that it is relevant herein. If the Commission is disposed to consider this draft report, it should so advise the carriers and give them an opportunity to comment.

WUI regrets that RCA has chosen the Commerce draft report as an excuse to launch an irrelevant and ill-founded attack upon WUI's corporate name by alleging public confusion from the similarity of names between WUI and the

domestic telegraph company. This anachronistic issue was vigorously debated 15 years ago in the Docket No. 6517 Divestment Case, and was resolved in favor of WUI's use of its corporate name. Western Union Divestment, 30 F.C.C. 323, 3434; affirmed upon reconsideration, 30 F.C.C. 951, 967-8.

The unfair advantages accruing to RCA from its giant conglomerate corporate family of the same name and identical logo are overwhelming. Notwithstanding, that the Commission is just now considering additional gateway cities, RCA maintains an unfair pervasive hinterland presence and identity through the RCA Service Company which, among other things, maintains and supplies teleprinters to hinterland customers who can use this equipment to send international messages. Attachment B hereto depicts RCA teleprinters available to the public in the hinterland.

RCA's irrelevant attack upon WUI in pages 13 through 18 of its Supplemental Comments should be disregarded. RCA relies upon an alleged market survey whose alleged summary results are quoted by RCA, without disclosure of the necessary parameters required to evaluate the adequacy and objectivity of the alleged survey. It is well known that the results of a questionnaire are influenced by the manner in which the sample is selected and the questions posed, and by the methodology used in tabulating and analyzing the answers.

Conclusion

In its Supplemental Comments of August 1, WUI has presented proposals for streamlining the Formula, and energizing the International Formula Committee, without the disruptions entailed by the ITT/TRT proposals. If the Commission does believe that the passage of time since the Formula was adopted requires some modification thereto, any of the three proposals set out by WUI would provide a far more beneficial result than the simplistic, but drastic, ITT/TRT proposals. However, WUI reiterates that the issue of Formula revision is a tempest in a teapot which is unworthy of the time and effort of the Commission and the industry already consumed. This is not a burning public interest issue. Accordingly, the Commission would be well-advised to terminate this Formula proceeding.

In the Matter of	)	
	)	
International Record Carriers' Scope of Operations in the Continental United States, Including Possible Revisions to the Formula prescribed under Section 222 of the Communications Act	)	Docket No. 19660 RM-690

TRT'S REPLY TO SUPPLEMENTAL COMMENTS

TRT Telecommunications Corporation (TRT) hereby submits its Reply to the Supplemental Comments filed herein by ITT World Communications Inc. (ITT), RCA Global Communications, Inc. (RCA) and Western Union International, Inc. (WUI) relating to the revision of the Formula prescribed under Section 222 of the Communications Act for the distribution of outbound international traffic. In support hereof, TRT respectfully states as follows.

I. The Present Formula Is Clearly Unjust, Unreasonable, Inequitable And Contrary To The Public Interest

In this lengthy proceeding, numerous pleadings have been submitted by the interested carriers. All facts relating to the present operation of the Formula and its historical development are now before the Commission. TRT submits that it is clear from the record before the Commisssion that the revision of the present antiquated Formula, prescribed over thirty years ago, is long overdue. The record shows, as outlined on pages 10-16 of TRT's Comments submitted on July 8, 1974, that the present Formula is

inequitable, illogical, cumbersome and is detrimental to the public interest in that the Formula acts as a disincentive to competition and better service, it arbitrarily assigns and denies quotas, it operates in an illogical manner which is inconsistent with its objectives and it unfairly accords the great majority of unrouted traffic to two carriers, RCA and WUI, on a completely arbitrary basis.

In spite of the overwhelming and largely undisputed record before the Commission showing the inequities and other defects of the Formula, the two principal beneficiaries of the present Formula, RCA and WUI, continue to argue in their latest pleadings that there is no need for revision of the Formula. Thus, RCA and WUI argue that the present Formula should not be revised because it has operated satisfactorily for the last thirty some years. By operating satisfactorily, RCA and WUI mean that the Formula has functioned to the extent that all unrouted traffic is distributed to one or more of the IRC's and that the industry during this period has continued to grow, prosper and generally serve the public.

However, any Formula, no matter how inequitable and contrary to the public interest, would operate satisfactorily under the criteria of RCA and WUI. For example, a Formula which arbitrarily assigned all unrouted traffic to one of the IRC's would also "operate satisfactorily" to the extent that unrouted traffic filed by the public with The Western Union Telegraph Company (Western Union) would be transferred to an IRC for overseas transmission. Even under this patently arbitrary and

inequitable distribution the industry would continue to function and serve the public. No matter how arbitrarily and inequitably this traffic is distributed, we have no doubt that the industry would continue to function and serve the public to some extent. However, the question is not whether the industry and the public it serves could survive a continuation of the present inequitable Formula. The question before the Commission is whether the present Formula is "just, reasonable and equitable" and whether the public would be better served by a revised Formula.

RCA and WUI also have argued that any change in the present Formula would result in excess plant capacity for the carriers now favored under the Formula and require carriers receiving increased traffic under the revised Formula to acquire additional plant capacity. However, in this regard, it should be noted that unrouted telegraph traffic originating on Western Union's system only represents approximately 12% of total telegraph traffic handled by the IRC's. It is apparent that any change in the distribution of unrouted traffic which may be directed in this proceeding would not result in significant excess capacity in the plants of the carriers now favored under the present inequitable Formula. It is also apparent that any additional traffic which may be accorded the presently disadvantaged carriers under an equitable Formula to be prescribed by the Commission could be handled by them with little additional plant investment.

II. RCA And WUI Have Not Presented Any Basis To Justify An Evidentiary Hearing

The present antiquated Formula has been in effect for over thirty years. ITT's "Complaint" for revision of the Formula has been pending for over ten years. Since ITT's "Complaint" was designated for separate investigation in Docket No. 19660 almost two years ago, numerous pleadings have been filed by all interested carriers. In addition, all relevant statistical data has been submitted to the Commission by the International Quota Bureau or by Western Union. Although the interested carriers have expressed differing views as to the conclusions which should be drawn from the data and information which has been submitted in this proceeding, there is essentially no dispute as to any of the material facts relevant to this investigation.

Neither RCA nor WUI have indicated any additional facts which they hope to present through any evidentiary hearing which have not already been presented in their pleadings. Certainly, RCA's proposal to bring a parade of "experts" before an Administrative Law Judge to "testify" to their opinion as to how the Commission should decide this case is an obvious delaying tactic which should be summarily rejected by the Commission.

III. Proposed Revisions Of The Other Carriers

A. Western Union

Western Union has suggested that the sender be required to specifically route all international traffic via one of the IRC's. This suggestion is supported in a draft report prepared by the Policy Support Division of the Office of Telecommunications, U.S. Department of Commerce. The other IRC's in their "Supplemental

Comments", we believe, have adequately shown that this suggestion is impractical. We will merely add to the comments of the other IRC's by pointing out that Western Union's proposal also would not even achieve Western Union's goal of reducing its involvement in the routing of traffic among the IRC's. It seems quite apparent that if customers were required to route all traffic substantial Western Union operator time would be required to explain the available routing options to customers, increasing Western Union's landline haul costs. Moreover, it is inevitable that Western Union would be continually involved in disputes with the IRC's relating to whether its operators have fairly and adequately explained routing options to customers.

Western Union has also suggested as an alternative that all unrouted traffic be transferred to the IQB or some other agency of the IRC's. This suggestion, although relieving Western Union of an apparently unwanted function, would clearly delay the transmisssion of unrouted traffic and should be rejected out of hand as contrary to the public interest.

B. WUI's Proposal

WUI, perhaps in recognition of the weakness of its basic position that the present Formula should not be revised, has for the first time suggested alternative revisions in its "Supplemental Comments". Each of these are patently designed to allow WUI to continue to enjoy a large measure of the unfair advantages accorded to it under the present Formula.

WUI's Proposal No. 1 is not really a proposal for revising the Formula but rather a proposal to delay any revision of the Formula. Thus, WUI suggests that the carriers themselves

agree to amend the Formula within the International Formula Committee (IFC). As even a cursory reading of the divergent views in the pleadings in this proceeding reveal, however, it is quite apparent that all interested carriers could not agree on the appropriate revisions of the Formula. Since WUI seems concerned about a revision of the present voting rights of the carriers within the IFC, it may be suggesting that the Formula be revised in accordance with the majority vote of the IRC's. TRT, of course, strongly objects to any proposal for the Commission to delegate its responsibilities for revision of the Formula to an IRC plurality.

WUI's Proposal No. 2 is to continue in perpetuity the present inequitable distribution of unrouted traffic as reported in the Western Union study. This would obviously do nothing to correct the present inequities under the Formula and would provide no basis for a modification of the distribution of traffic to reflect current conditions.

WUI's Proposal No. 3 would be a minor improvement over the present Formula in that some of the glaring anomalies would be eliminated. However, distribution still would unreasonably be based essentially on the market shares of the carriers in 1942. Moreover, there also would be no mechanism to modify the distribution of traffic to reflect current conditions.

C. ITT's Proposal

ITT proposes to have all unrouted traffic distributed to the IRC's having direct circuits to a country in proportion to the number of routed messages each carrier received from Western Union. In this regard, we agree that the distribution

of unrouted traffic in proportion to each carrier's share of Western Union routed traffic provides a logical and equitable distribution method which recognizes the competitive nature of the industry. However, ITT by proposing that traffic only be routed to carriers operating direct circuits has introduced an element which would have an anti-competitive effect nearly as great as the present Formula. ITT's proposal would deprive smaller carriers of a fair share of unrouted traffic for the enrichment of the larger carriers. Thus, the effect of ITT's proposal would be to tend to keep the small carriers small and the large carriers large perpetuating the present competitive imbalance within the industry. Moreover, there is absolutely no reason to deprive a carrier operating indirectly to an overseas point of a share of unrouted traffic proportional to its share of routed traffic which it is able to obtain in competition with the other carriers.

In support of its proposal, ITT states the distribution of any unrouted traffic over indirect routes would frustrate the Commission's determination of the amount of competition among IRC's which is reasonable and in the public interest. We are somewhat at a loss to understand what ITT means by this statement. The Commission has, of course, always permitted carriers to compete for traffic over indirect routes and to our knowledge no one has ever denied that such competition is in the public interest. In a similar vein, ITT argues that the distribution of any unrouted traffic to carriers operating indirectly would deprive a carrier of traffic to points which the Commission had authorized it to serve directly and reward another carrier

not so certified. In response to the argument, suffice it to say that the Commission in authorizing direct circuits, clearly never intended to grant a monopoly to those carriers receiving direct circuit authority.

ITT further argues that the distribution of any unrouted traffic over indirect routes would result in a lower quality of service to the public. In this regard, TRT will agree that all other factors being equal direct service can be expected to result in better service than indirect service. However, all other factors are never equal. Especially with respect to message traffic, direct versus indirect routing is a relatively minor factor affecting overall service quality. Thus, indirectly routed traffic is usually automatically switched in the transiting country and received in the terminating country moments after it is transmitted by the originating carrier. Thus a much more significant factor affecting overall service quality is the speed and accuracy of the originating IRC in formatting and sending the message, whether it is transmitted to the country of destination over a direct or an indirect route.

TRT receives substantial routed traffic via its indirect routes which, we believe, indicates customer satisfaction with TRT's services. Thus, we submit that to the extent that TRT or another carrier is capable of successfully competing for and retaining routed traffic via its indirect routes, it should not be artificially excluded from handling unrouted traffic to those points as proposed by ITT.

Finally, ITT argues that the distribution of any unrouted traffic over indirect routes would produce an unneces-

sary impact on the US balance of payments as a result of lower US retained revenues. RCA at page 11 of its Supplemental Comments makes a similar argument. ITT and RCA impliedly assume that the retained revenue on indirectly routed traffic is significantly lower than for directly routed traffic. This is not the case. The retained revenue for indirectly routed traffic is generally comparable to that applicable to directly routed traffic. In this regard, TRT compared the division of tolls on file with the Commission for the top 21 message traffic points as reported by the Commission. To 11 of these points TRT operates indirectly although one or more of its competitors operates directly. To two of these major points TRT's retained revenues were actually higher than its competitors operating on direct circuits. Overall, TRT's retained revenue for these 11 points was, on the average, less than a penny per word lower than its competitors operating via direct circuits.

Moreover, the quantity of unrouted traffic that would be transferred to carriers operating on indirect routes quite obviously would not be sufficient to materially affect the international balance of payments. A carrier generally operates on an indirect basis to overseas points because it has not yet built up sufficient traffic to that point to justify a direct circuit. Under a formula which transfers unrouted traffic in proportion to each carrier's share of routed traffic, only a minor share of unrouted traffic would be distributed over indirect routes. Certainly, any de minimis effect which the transfer of unrouted traffic to indirect routes might have on the international balance of payments does not justify ITT's inequitable and

anti-competitive proposal any more than it would justify the complete exclusion of carriers from markets for which they have not been authorized to operate direct circuits.

IV. TRT's Proposal

TRT on pages 16-20 of its Comments filed herein on July 8, 1974 has proposed two alternative revisions of the Formula which, we respectfully submit, will provide equitable and logical methods for proportioning unrouted traffic. In seeking an equitable, logical method for proportioning unrouted traffic among all IRC's, the two fundamental criteria should be simplicity and flexibility. The simplest method, and a fair method, would be to proportion unrouted traffic equally between all IRC's serving each destination without regard to message category or length.

TRT's second alternative proposal is essentially that each carrier should be allocated a percentage of unrouted traffic to each destination it serves directly or indirectly in proportion to that carrier's share of the total routed Western Union traffic. We submit that this is a logical and fair method which gives due recognition to the verdict of the marketplace as to the relative capabilities of each IRC to handle the traffic. Moreover, it is a method which rewards rather than penalizes a carrier for carrying specifically routed traffic, and one which provides an incentive rather than a disincentive to improve the services it provides to and rates charged the using public.

RCA implies that the implementation of TRT's proposal would have a severe adverse impact on its operations, alleging at page 12 of its "Supplemental Comments" that it would lose approximately $3,000,000 of outbound GIT per year under the TRT

plan. However, we submit that a more meaningful measure of the impact of the revisions proposed by TRT is set forth on Table 5 of its Supplemental Comments. Table 5 shows the effect of TRT's proposed Formula revision in terms of net US retained revenue, which excludes payouts to foreign correspondents. As shown on Table 5, RCA's revenue loss under TRT's proposal would be $1,229,985 or only approximately 1% of its total revenues from regulated operations.

WUI argues at page 13 of its "Supplemental Comments" that ITT's proposal and by implication TRT's also is arbitrary by making the distribution of unrouted traffic dependent on the distribution of routed traffic. In this regard, WUI argues that routed traffic is by and large business oriented traffic while unrouted traffic is largely social traffic. However, we submit that each carrier's share of routed traffic provides the only objective measure available of the public's view as to the relative merits of the various carriers. Moreover, we note that WUI, although arguing that the proposals of ITT and TRT are illogical and arbitrary, does not even contend that there is any logical basis for the existing Formula or any of the revisions which it has proposed.

WHEREFORE, TRT respectfully requests the Commission to promptly revise the Formula to provide for distribution of unrouted traffic which will be just, reasonable, equitable and in the public interest.

Respectfully submitted,

REPLY OF WESTERN UNION

The Western Union Telegraph Company (Western Union) herein files its Reply to the Supplemental Comments of Western Union International, Inc. (WUI), RCA Global Communications, Inc. (RCA), ITT World Communications, Inc. (ITT), and TRT Telecommunications Corporation (TRT) in the above-referenced proceeding.

1. Without addressing the merits of the IRC's suggested changes in the international formula, Western Union again emphasizes its position that there exists no reason why it should continue to play a role in the distribution of unrouted cablegram traffic. Western Union's burden in such distribution should be eliminated or greatly reduced, e.g., by requiring that all cablegrams be specifically routed by the sender or by having Western Union transfer all unrouted traffic to the IQB for distribution.

2. As Western Union has previously stated, we find that the existing Formula is becoming increasingly incompatible with requirements of the modern handling and processing of

international telegrams. The implementation of the changes in distribution under the Formula impeded to some extent the efficient handling of international telegrams even in the past, when such handling was done manually. The problems of implementing the Formula in the context of Western Union's computerized switching system present much greater problems. In this regard, it is estimated that the capital cost of programming the Company's computers to provide the current distribution would be approximately $150,000. Substantial additional programming cost would be incurred each time changes in the existing distribution would be made pursuant to the Formula quota provisions to reflect changing traffic patterns.

Finally, one proposal of WUI is worthy of specific comment. That carrier suggests, as one alternative to the present method of distribution, that the carriers themselves could work out amendments to the international formula which would be acceptable to all participants. While this suggestion or other similar alternatives may be attractive to the other IRC's, if Western Union continues to be part of the distribution procedures no change should be made without the concurrence of Western Union. Additionally, whatever method of distribution is adopted should be simple, and compatible with Western Union's method of operations. For example, frequent changes should be avoided and the language of the revised Formula should be complete and precise making clear, among other things, that all capital costs incurred by

Western Union be borne by the international carriers.

In sum, Western Union again urges the Commission to find an alternative to Western Union's role in the distribution of unrouted international messages.

Respectfully submitted,

TO: The Commission

PETITION FOR STAY

RCA Global Communications, Inc. (RCA Globcom) hereby requests a stay of the Commission's Report and Order and Notice of Proposed Rulemaking released January 7, 1976 ("the Decision"). The Decision found unlawful the existing formula governing the distribution of unrouted international telegraph traffic originating on the system of The Western Union Telegraph Company (Western Union) and prescribed, pursuant to Communications Act § 222(e)(3), a new interim formula to be effective March 1, 1976. RCA Globcom submits that the Decision fails to satisfy the statutory requirements of the Communications Act and fails to support

the findings that the existing formula is unlawful or that a new formula should be prescribed. Accordingly, RCA Glōbcom requests that the Commission stay its Decision while prompt judicial review of the Decision is sought.*

Preliminary Statement

The Decision repeals, effective March 1, 1976, the formula which has governed distribution of unrouted international telegraph traffic since 1943. The Decision, based upon a complaint submitted by ITT World Communications Inc. (ITT Worldcom) and the written comments submitted by interested carriers and others, concluded that the existing formula is unjust, unreasonable, inequitable and not in the public interest. To replace it, the Commission has prescribed an "interim formula" which will distribute to each international carrier unrouted telegram traffic in proportion to its share of routed telegram traffic. The new formula

---

*RCA Glōbcom had intended initially to file this petition for stay shortly after the Decision was formally issued. However, as a result of informal contacts with Western Union, it appeared that that carrier would be unable to make the necessary administrative and operational changes to meet the March 1, 1976 date for changing to the interim formula. Accordingly, we decided to wait until this information was confirmed and presented to the Commission. This presentation was made on February 3, 1976 and, it now appears that the interim formula cannot become effective before March 21, 1976 at the earliest. Therefore, this petition for a stay is being submitted substantially before the earliest possible implementation date of the interim formula.

is intended to be an interim measure pending further proceedings on whether, ultimately, customer routing of all overseas telegram traffic should be required. However, while clearly intended to be interim in nature, the formula prescribed by the Commission will increase, as explained in detail below, Western Union's charges to the international carriers for administering the distribution of traffic by approximately $150,000-$200,000 per year and result in a deterioration of service. The Decision also denied earlier requests by RCA Globcom and Western Union International, Inc. (WUI) for the convening of oral evidentiary hearings under Section 222(e)(3) of the Communications Act and the Commission's Rules before the issuance of a decision on the lawfulness in the existing formula.

Errors In The Decision

The Decision bases its conclusion that the current formula is inequitable and no longer in the public interest on two primary findings. First, the Commission said that the formula "represents a market sharing device which is by definition antithetical to the free flow of competition which Congress sought to encourage and enhance." (Decision p. 2) RCA Globcom submits that a simplistic reliance upon "competition" as the benchmark to determine the "public interest" in the present formula is unwarranted in law, FCC v. RCA Communications, Inc., 346 U.S. 86 (1953), Hawaiian Telephone Co. v. FCC, 498 F.2d 771 (D.C. Cir. 1974), and not

consistent with the philosophy of regulation. RCA Globcom and the others involved in this proceeding are regulated common carriers precisely because Congress long ago recognized that "competition" cannot serve as a final measure of every detail of the nation's international communications capability.

Second, the Decision found that "under the present formula, it is apparent that for all carriers there is no relation in fact (either direct or inverse) between a given carrier's handling of routed traffic and its handling of unrouted traffic." (Decision p. 13) The Decision did not, however, articulate reasons why it is necessary for such a relationship to exist.

RCA Globcom submits that neither finding supports the conclusion that the present formula is unjust, unreasonable, inequitable, or not in the public interest. In addition to these basic deficiencies, the Decision is replete with other subsidiary findings which are little more than speculative conclusions unsupported by substantial evidence or, in many cases, by any evidence at all. The Decision includes such unsupported assertions as:

> ·distortions have made the formula inequitable and have worked against the public's interest in a strong, efficient message service - p. 3;

·the formula originally called for proportioned distribution of unrouted traffic - p. 14;

·the formula provides a danger that service may not be improved - p. 17;

·distortions in distribution are injurious to the public interest - p. 17;

·the formula stifles user choice - p. 26;

·the formula harms carriers by denying unrouted traffic - p. 26;

·the formula disregards the public's role - p. 12;

·carriers have not effectively sought to reach users - p. 27;

·public interest will be served by reliance upon consumer choice - p. 35.

The Decision's numerous unsupported findings demonstrate that its ultimate conclusions on the existing formula are not based upon substantial evidence, but are an arbitrary and capricious product of speculative theorizing. A Decision so grounded should be vacated. See Bowman Transportation, Inc. v. Arkansas - Best Freight System, Inc., 419 U.S. 281, 285 (1974); Nader v. FCC, 520 F.2d 182, 193 (D.C. Cir. 1975).

The prescription of a new interim formula by the Commission

is equally faulty. In this respect, the Commission failed to treat the effect of the new formula on the carriers or the public--an issue which it had designated for comment by the parties and on which substantial reliance had been placed in a prior Commission decision on the formula. See 30 F.C.C. 380 (1961). The Commission did not address the argument, which had support in the paper comments and which was unrefuted by the opposing parties, that the public would be adversely affected if a formula were prescribed that gave an incentive for excessive sales expenditures. Rather, without even addressing the adverse effects therefrom, the Commission stated that it expected the carriers to ready a new advertising campaign leading to millions in new costs to solicit routings from users who have domonstrated everyday for many years that they simply do not care.*

Finally, the Commission failed to address the operational practicality of the interim formula. This failure has resulted in the prescription of a formula which will not only be more

---

*The Commission has failed to adequately consider that under modern computer technology, outbound telegram traffic is being transferred automatically from Western Union to the overseas circuits of the international carriers.

costly to administer but will also result in degradation of service to the public. As the Commission's staff and the parties were informed on February 3, 1976 at a meeting requested by Western Union, the implementation of the interim formula will entail an annual additional recurring cost of $150,000 to $200,000.* But even more striking is that the added complexities of the interim formula will result in a degradation in service of at least 20 minutes for each of approximately one-half of the unrouted messages now handled.

Therefore, we submit that the Commission failed to demonstrate that the interim formula will conform to the statutory requirements of Section 222(e)(3).

Furthermore, the Commission's refusal of the request by RCA Globcom and others for evidentiary hearings was a prejudicial error which denied to the Commission a record adequate for the decisional process which the Commission pursued. In light of

---

*It should also be noted that the above costs apply only if the interim distribution of unrouted messages is done on a manual basis. If the interim formula were to be extended, efforts to computerize the distribution would be made at an unknown but substantial cost. Western Union estimated that the programming task would take nine months.

Section 222(e)(3)'s requirement for a full hearing, the denial of such hearing was more than bad practice, it was legal error. United States v. Storer Broadcasting Co., 351 U.S. 192, 202 (1956); International Harvester Co. v. Ruckelshaus, 478 F.2d 615, 630 (D.C. Cir. 1973); American Telephone & Telegraph Co. v. FCC, 449 F.2d 439, 451 (2d Cir. 1971); Langevin v. Chenango Court, Inc., 447 F.2d 296, 300-01 (2d Cir. 1971). See also 5 U.S.C. § 553(c) (1970). RCA Globcom submits that the parties posed, and the Commission ignored, factual issues* which required a full evidentiary record.

---

*The Commission should have heard evidence on such questions as these:

- whether and in what respect does equitable distribution require a relation between routed and unrouted traffic;
- what carrier actions lead to overages and deficiencies under the present formula;
- how, if at all, the formula acted as a disincentive to improved service;
- the extent to which formula changes will lead to duplication of facilities and increased solicitation costs;
- whether and in what way increased competition will benefit the public;

(con'd. on next page)

As a result of the above listed deficiencies, RCA Globcom submits that the Commission's holding on the existing formula and the new formula is based on an inadequate record, does not conform with the statutory standards of Section 222(e)(3), and is not supported by adequate and necessary findings by the Commission. American Telephone & Telegraph Co. v. FCC, supra, 449 F.2d at 450-51; see National Ass'n of Motor Bus Owners v. FCC, 460 F.2d 561, 565 (2d Cir. 1972). In short, the Commission has not satisfied, in terms of either procedure or substance, the requirements imposed by Section 222(e)(3) as a condition of cancelling the current formula and prescribing a new one.

(con'd. from preceding page)

- whether service on WU originated traffic is better to countries where a single carrier receives all the unrouted traffic than to countries where unrouted is shared or vice versa;
- how and in what specific respects can service on WU originated traffic be expected to improve as a result of a change in the formula;
- is there any evidence that unrouted filers care which carrier handles their traffic;
- whether the public is willing to pay the increased cost of solicitation and what that cost will be.

These issues, while relevant to any proper decision-making process, could not be developed within the restrictive procedural format provided by the Commission.

A Stay Is Proper Until The Requirements Of Section 222(e)(3) Have Been Satisfied

The preceding sections demonstrate that the Commission's rejection of the old formula and prescription of a new formula failed to comply with Section 222(e)(3) of the Communications Act and, therefore, cannot stand. Certainly, there is strong reason for believing that a court of appeals may so hold. The Commission's action also works such grievous harm upon RCA Glōbcom that its implementation should be stayed while judicial review is sought.

RCA Glōbcom submits that the issuance of a stay is especially appropriate in view of the fact that the formula scheduled to become effective in March is only interim in nature and represents only a step towards the ultimate formula that the Commission stated it believes should be prescribed. Since comments on the Commission's proposal are to be filed March 26, 1976, there is no reason for the Commission to effectuate an interim formula which will cause substantial disruption of existing distribution patterns, add unnecessary cost, and degrade service to the public.

Consequently, this factor should be given great weight by the Commission in its deliberation on the instant petition for stay.

The courts have enumerated the following circumstances in which a stay is proper.

> The petitioner has made a strong showing that it is likely to prevail on the merits of its appeal.
>
> The petitioner has shown that without such relief it will be irreparably injured.
>
> The public interest will not be harmed.
>
> The issuance of a stay will not substantially harm other parties, See e.g., Virginia Petroleum Jobbers Association v. FPC, 259 F 2d 291 (D.C. Cir. 1958).

Those standards also have been used by the Commission in determing whether a stay should be granted. See Request for Stay of FCC Schedule, 52 F.C.C. 2d 224 (1975). Application of those four standards to the present facts demonstrate that the Decision should be stayed.

Likelihood of Success. The Commission's Decision, for the reasons already noted, conflicts with the requirements of Section 222(e)(3). The Decision was rendered in disregard of that statute's requirement for a full hearing. It was rendered upon an inadequate and

incomplete record. Important factual "findings" in the Decision respecting the old formula are in many instances incorrect and in others so devoid of any basis as to be arbitrary and capricious. With respect to the interim formula prescribed by the Decision, no adequate findings have been made. In light of these substantive deficiencies, RCA Glōbcom has strongly demonstrated that it is likely to prevail on the merits of its appeal.

Irreparable Injury. The irreparable injury that will be sustained by RCA Glōbcom should a stay be denied is caused by the fact that RCA Glōbcom will lose annually approximately 412,000 United States originated telegrams. This will cause RCA Glōbcom to sustain an outbound revenue loss of approximately $428,000. Some 530,000 telegrams of foreign origin also would be lost to RCA Glōbcom causing an annual inbound revenue loss of $1,600,000. The traffic foregone and the revenue lost is irretrievably gone and cannot be recovered at some later time.

Furthermore, should the old formula be tossed aside and an interim formula put in effect pending an appeal, RCA Glōbcom and the other IRC's and Western Union will be compelled to develop their technological plans and communication services on a conditional basis since the duration of the new formula would be in doubt. This

commercial uncertainty will lead to inefficiencies, not readily quantifiable in terms of dollar effect, in the operations of RCA Glōbcom and presumably other carriers.

Moreover, should the interim formula take effect, large increases in sales and advertising expenses will become immediately necessary. RCA Glōbcom estimates its additional telegram marketing expenses will increase dramatically, especially if it is seriously going to try to effectively reach users in the hinterland who do not now route and who number in the hundreds of thousands, to the extent of $342,600 a year. Failure to reverse the Commission's interim formula will render such added expenditures a further unrecoverable and irreparable injury. RCA Glōbcom believes those added expenses to be contrary to the public's interest in an efficient and economical overseas telegraph system.

Effect on Public Interest. The stay sought will not harm the telegram users--not one of which has asked the Commission for the change to our knowledge; its denial will. Once the interim formula takes effect increased sales efforts to garner overseas traffic will become the order of the day as the Commission staff recognized. The Commission has not yet considered, much less determined, the adverse effect this in the long run will have on the public. The most likely

result is that the increased overall costs will lead ultimately to a corresponding increase in charges to the public.

As noted above, the public will also be injured during the interim period by the fact that approximately one-half of the unrouted messages now handled will be delayed under the administration of the interim formula for periods estimated by Western Union to be 20 minutes or more. In addition, it should be noted that the meager findings which the Commission made concerning possible benefit to the public from the interim formula were highly conjectural in some cases and simply incorrect in others. There cannot be any short term detriment to the public if the effectiveness of the interim formula is stayed.

The combination of the above factors indicate that stay of the Decision will probably result in benefits to the public and, at worst, will not have any adverse effect.

Lack of Substantial Harm to Others. While revision of the formula works irreparable harm to RCA Globcom, a stay of the Decision preserves the position of the other carriers. Destruction of the old tears down what RCA Globcom has developed over thirty years--a communication service geared to handle an anticipated

telegram volume and to generate a resulting level of revenues. By having the interim formula to go into effect, the telegrams and revenues anticipated by RCA Globcom are taken from it and distributed to other carriers. The net effect of this unjustified redistribution is that RCA Globcom is left with a substantial loss while other carriers reap an unanticipated and unjustified revenue windfall.

Beyond the above, the thought that an extension, pending judicial review, of a distribution system that has enabled all carriers to expand service and to do so profitably for over thirty years will cause substantial harm to other carriers flies in the face of reality. The relief sought would work no substantial harm to other carriers or the public. It would merely continue, for a limited period, a condition under which all have operated for three decades.

Conclusion

For the reasons set forth in this petition, RCA Globcom requests the Commission to order a stay of its formula Decision pending judicial review.

Respectfully submitted,

RCA GLOBAL COMMUNICATIONS, INC.

February 11, 1976

AFFIDAVIT OF CLAUDE DAOUD

STATE OF NEW YORK)
) ss.:
COUNTY OF NEW YORK)

Claude Daoud, being duly sworn, upon oath deposes and states as follows:

I am employed by RCA Global Communications, Inc. as Administrator, Operating Arrangements and Planning. I performed an evaluation of the loss in terms of messages and dollars for traffic both originating in the United States and in overseas locations that would result if the Commission's decision on the international formula were to become effective. The evaluation took into account the actual distribution to be made on a per country basis with the actual division of revenues applicable to traffic to the individual countries. The figures appearing on page 12 are the result of the study that was performed and are correct to the best of my knowledge and belief.

Claude Daoud

AFFIDAVIT OF MARTIN FINKELSTEIN

STATE OF NEW YORK)
) ss.:
COUNTY OF NEW YORK)

Martin Finkelstein, being duly sworn, upon oath deposes and states as follows:

1. I am employed by RCA Global Communications, Inc. (RCA Globcom) as Director, Switched Services Marketing. In this position, I am responsible for the marketing of RCA Globcom's telegram service. As a result of the Commission's decision on the international formula, I have been engaged in preparing plans for increasing RCA Globcom's sales effort to solicit traffic which has been heretofore unrouted. The dollar figure appearing on page 13 was an estimate prepared by me and is intended to represent the initial minimum expenditure that will be necessary under the interim formula. Undoubtedly, a much larger increase in sales expenditures will be necessary in the future as the other international carriers also increase their solicitation efforts under the interim formula.

2. The estimate appearing on page 13 is correct to the best of my knowledge and belief.

Martin F. Finkelstein

In the Matter of	)	
	)	
International Record Carriers' Scope of Operations in the Continental United States, Including Possible Revisions to the Formula Prescribed under Section 222 of the Communications Act	)	Docket No. 19660 RM-690

To: The Commission

MOTION FOR EXTENSION

The Western Union Telegraph Company ("Western Union") hereby moves the Commission to extend the March 1 deadline for the implementation of a new interim formula governing the distribution of unrouted international cablegram traffic (as established in the Commission's Report and Order and Notice of Proposed Rulemaking, released January 7, 1976, F.C.C. 75-1430) until March 21, 1976. In support of this motion, Western Union states as follows:

At the present time, Western Union receives approximately 59,000 unrouted international cablegrams each week at its computer center in Middletown, Virginia. About 26,000 of these unrouted cablegrams are destined to "exclusive" areas (i.e., areas to which all unrouted traffic is sent via a single IRC) and can be sent automatically to a specific IRC directly from our Middletown computer. The remaining 33,000 messages are transmitted to

483

Minneapolis where they are sorted, and in most instances, tallied by hand. /1

The new "interim formula" proposed by the Commission in its Report and Order of January 7 would eliminate "exclusive" destinations and would require -- until the entire process could be computerized -- that all 59,000 weekly messages be sorted and tallied manually at our Minneapolis facility. This would just about double the number of messages to be handled at Minneapolis. In addition, the process of tallying and sorting the messages received would become more complex because

(1) The number of separate overseas destinations would be increased from 34 to 195, and

(2) The messages themselves would have to be tallied in multiples of 100, /2 whereas, at present, messages are tallied on the basis of simpler ratios.

Extensive modification of our existing facilities in Minneapolis will be required before Western Union is able to handle the almost doubled volume of traffic and more complicated sorting occasioned by the Commission's new interim formula. New channels will have to be ordered between Minneapolis and the various inter-

---

/1 About 6,600 messages sent to Minneapolis are to "exclusive" areas receiving comparatively little traffic. These messages must be sorted but not tallied at Minneapolis.

/2 For example, under the new interim formula, the distribution of unrouted traffic to the Senegal Republic would break down as follows: 9.88% to French Cable; 26.72% to ITT; 49.42% to RCA; .14% to TRT and 13.84% to WUI. In order to give each carrier the unrouted traffic it is entitled to under the formula to the nearest percentage point, the operator must keep track of at least 100 messages.

national carriers; the sending speed of certain existing channels to the IRCs will have to be increased from 75 to 100 words per minute; new teleprinters and other equipment will have to be ordered and installed; and, existing facilities will have to be rearranged to make room for the additional equipment placed on line. The expanded and reorganized facilities at Minneapolis will then have to be thoroughly tested before being brought into service.

Equally important, the distribution of unrouted cablegrams under the new formula will require the addition of a minimum of seven new employees at our Minneapolis center to assist with the increased sorting and tallying involved. Pursuant to our existing labor agreement we must post the bulletins for the new positions involved here (operators and clericals) for seven consecutive days. Western Union will then have an additional seven days in which to award the positions to successful applicants. If no bids or an insufficient number of bids are received from within the company, Western Union will then seek applicants outside. Once the seven positions have been filled, we estimate that a two week training period will be required simply to teach the new operators the "switching" phase of their work. In addition, further training will be required for the operators to familiarize them with all methods of operation.

Western Union will not be able to complete the extensive renovation and expansion of facilities at its Minneapolis center or train the necessary employees in time to meet the March 1 deadline for implementing the new formula. Our best estimate at the

present time is that the necessary preparations -- which have already commenced and are proceeding without delay -- will be completed on or shortly before March 21. We therefore urge that the Commission extend the present March 1 date until March 21, when Western Union will have the facilities and manpower to undertake the additional burdens placed upon it by the new formula.

We have been authorized to state by counsel for the principal parties in interest here -- ITT World Communications, Inc., RCA Global Communications, Inc., TRT Telecommunications Corporation, Western Union International, Inc. -- that they have no objection to the extension requested herein.

WHEREFORE, for the foregoing reasons, The Western Union Telegraph Company respectfully requests that its Motion for Extension be granted and that the date for the implementation of a new interim formula governing the distribution of unrouted international cablegram traffic be extended to March 21, 1976.

Respectfully submitted,

THE WESTERN UNION TELEGRAPH COMPANY
